

Overview

Aristotle™ is a software package designed especially for schools. It gives students, teachers, staff, and others at individual Apple® II workstations fast and easy access to ProDOS® applications stored on an AppleShare® file server.

Aristotle consists of two inter-related programs, menu display and menu management. The menu display program presents students and teachers with menus that list teacher names, the classes they teach, and the applications available for each class. The menu management program allows teachers or network administrators to tailor the menus—including which applications will be available—for each user.

Features

- ▶ Centralized application access and management
- ▶ AppleShare-aware
- ▶ Easy-to-use interface

Benefits

- ▶ Allows students using the menu display program to access ProDOS software on AppleShare file servers. (Software must be designed for use on a file server.)
 - Students first select a teacher and class, then choose from a list of available applications.
- ▶ Lets teachers and network administrators using the menu management program specify which applications each student, study group, or class can access.
 - Permits individualization of students' options.
- ▶ Enables Aristotle to be stored on an AppleShare file server and run from multiple workstations simultaneously.
 - Allows teachers using the menu management program to modify menu selections at any time, from any workstation.
- ▶ The interface for the menu display program includes menus that allow students to access ProDOS software without entering ProDOS pathnames or BASIC commands.

Aristotle

System Requirements

Note: A 3.5-inch disk drive is required to load the Aristotle software onto the AppleShare

file server initially, but is not needed after that.

To use the menu management program of Aristotle, you will need one of the following systems:

► An Apple IIGS® computer with a monitor and an Apple IIGS Memory Expansion Card that has one megabyte of memory; and a LocalTalk™ Locking Connector Kit

► An enhanced Apple IIe computer with an AppleMouse™ IIe, an Apple II Workstation Card, and an Apple IIe Memory Expansion Card (256K minimum); and a LocalTalk Locking Connector Kit

To use the menu display program of Aristotle, you will need one of the following systems:

► An enhanced Apple IIe with 128K of memory; an Apple IIe monitor; an Apple II Workstation Card (with AppleShare IIe Workstation installer disk); and a LocalTalk Locking Connector Kit

► An Apple IIGS with a total of 768K of memory (256K on the motherboard and 512K on an Apple IIGS Memory Expansion Card); an Apple II monitor; AppleShare IIGS Workstation Software for your AppleShare file server; and a LocalTalk Locking Connector Kit

Ordering Information

Aristotle
Order No. A2D2059

With your order, you'll receive:

- One 3.5-inch program disk
- *Aristotle Administrator's Guide*
- 25 Aristotle Startup Reference Cards, for individual workstations
