

Apple Multimedia Kit for Macintosh

Features

AppleCD 300e Plus external CD-ROM player

- Provides double-speed (up to 342 kilobytes/s) streaming data-transfer rate and 290-ms CD-ROM access
- Supports all major CD-ROM formats
- Works with multisession Kodak Photo CDs
- Plays audio CDs
- Offers motorized tray loading for convenience
- Allows burst data-transfer rate of up to 2.5 MB/s using built-in 256K cache and SCSI II inputs and outputs

AppleDesign Powered Speakers II

- Offer audiophile-quality stereo separation, sound reproduction and frequency response with these features:
 - tuned port bass reflex system
 - active equalization
 - controlled sound dispersion
- Incorporate magnetic shielding for use near computer displays and peripheral devices without interference
- Contain built-in noise-reduction circuitry
- Work with personal and portable stereo systems, as well as televisions that support sound output

Apple Headphones

- Outstanding audio quality
- Convenient, comfortable, lightweight design
- Extra-long cable for convenience

CD-ROM titles

- Apple *Multimedia Starter CD*
- Compton's *Interactive Encyclopedia*
- Your choice of up to three free CD-ROM titles from a selection of top CD titles

Complete setup

- All necessary cables, connectors, and software are included

The Apple Multimedia Kit for Macintosh fast-forwards you and your family into the Macintosh multimedia revolution with a complete setup—a CD-ROM player, speakers, headphones, and CD-ROM titles—at a fraction of the price of components purchased separately.

And it brings you all the benefits of multimedia: entertainment, games, self-improvement, home education, business, and personal finance. There's also a wealth of reference materials, animation, clip art, sound effects, and entertainment available.

The double-speed AppleCD 300e Plus external CD-ROM player delivers fast access to QuickTime movies, images, sounds, and music stored on CD-ROM discs. It works with audio CD discs, minidisks, and multisession Kodak Photo CD discs, too.

The QuickTime software included in the kit gives your Macintosh the ability to play sound, video, and

animation from within applications without additional hardware.

The AppleDesign Powered Speakers II are specially engineered and shielded for use with Macintosh computers and displays. The speakers provide audiophile-quality sound in a compact size. You can hear audio tracks from your AppleCD 300e Plus player and your Macintosh computer simultaneously. And for outstanding audio quality and private listening, use the Apple Headphones included in the kit.

The Apple *Multimedia Starter CD* takes you on a tour to show you how to make the best use of the power of multimedia.

This kit also contains Compton's *Interactive Encyclopedia* and your choice of up to three free CD-ROM titles from a menu of available CD-ROM titles selected for their value and quality.

Apple Multimedia Kit for Macintosh
