

INSTALLATION

The photograph at the left shows an old model Lower Case Adapter (LCA-1) properly installed in an Apple-II computer. The photo shows a portion of the CPU board at the front edge. The first row of RAM memory chips can just be seen at the top of the photo, and the keyboard cable connector is partly visible below the right side of the LCA-1. The computer's case was removed to take this photo because this area of the CPU board is normally obscured by the keyboard. Although the LCA-1a has a slightly different appearance, it is installed in the same locations.
