

MAESTRO SUPERCARD MODEM

The SUPERCARD is capable of communicating at 300, 1200/75 and 1200/1200 baud. Baud rate selection depends on the setting of the shorting lug in the centre of the card as follows:

Shorting lug set at 3 (low)			Shorting lug set at 12 (high)	
TERMINAPPLE	ACTUAL	:	TERMINAPPLE	ACTUAL
300	300/300	:	300	1200/1200
1200	1200/75	:	1200	1200/75

Apart from the above difference the same comments apply as per the older MAESTRO MODEM CARD described in the ADDITIONAL DOCUMENTATION FOR TERMINAPPLE.

APPLE //GS

If you are using the built-in communications interface, the baud rate, data/stop and parity bits must be set using the CONTROL PANEL which is accessible from Terminapple's main menu.
