TimeBandit

Time & Pitch Correction for Mac & Power Mac

TimeBandit is an indispensable tool for anyone working with digital audio...change the tempo of a recording without affecting the pitch - or the pitch without affecting the tempo. And what's more, you don't need to be a human calculator to use this program. All parameters are set in a musician-friendly and clear manner. You want to change the tempo of a file? Then type in the new tempo! You want to stretch audio to fit a certain length? Just type in the required length - in SMPTE, seconds or samples. Sounds like a dream? Stop dreaming and check out TimeBandit!

Placing TimeBandit and Cubase Audio on the same hard disk makes TimeBandit's functionality available from within Cubase Audio. TimeBandit will process any mono and stereo audio files stored in AIFF, SoundDesigner 1 and 2 formats.

Time Correction

- 25% vari-speed without pitch shift in 'normal' mode
- Up to 10 times vari-speed in effect mode
- Tempo calculator integrated
- Time as SMPTE, samples or seconds
- Accuracy preference control for perfect results: from drum loops to choirs, the spoken word to whole tracks!

Key Features

- Easy-to-use interface
- Exceptional audio quality
- No limit to file lengths
- Non destructive processing
- Batch process
- Optimized for Power Macintosh

Monitoring

- Internal speaker for monitoring, SoundManager supported
- Digidesign audio cards supported

Pitch Correction

- Turbo-Shift: Shift up to 4 octaves in one go
- Harmonization: create up to 16 voice polyphonic chords from one audio file
- Multi-Sample process: create a whole set of audio files in different pitches in one process
- Pitch analysis from audio material
- Pitch settings can be saved for later use

System Requirements

- Any Mac with at least a 68020 processor
- 1 MB RAM
- Hard Disk
- Macintosh System 7 or higher
