Spectrum HoloByte®

IT'S HARD TO IT'S ONLY

Spectrum HoloByte is the premier name in entertainment software. From jet fighter simulations to mind-bending word puzzles to plots of political intrigue, the company has given millions of game enthusiasts countless hours of adrenalin-pumping pleasure.

Spectrum HoloByte is committed to leading the industry in realism, graphics, sound, animation and head-to-head play. We want our software to be so captivating you'll have to remind yourself: it's only a game.

TELL YOUR HEART IT'S NOT REAL

Our Falcon 3.0 is an example of the unsurpassed realism of Spectrum HoloByte games. It brings you an F-16 fighter simulation previously found only on multi-million dollar flight simulators. It's the first PC combat simulator to incorporate a highly accurate F-16 flight model that takes advantage of the extra speed of an optional math coprocessor. Falcon 3.0's campaign generator creates a different scenario for each mission depending on your accomplishments in past missions; *no two campaigns will ever be alike*. And the exclusive 3-D relief terrain is an exact replica of real-world contour maps in real-life

theaters of action. We even developed a special "padlock" view that allows the pilot to keep his eyes on the enemy in the sky—just as in real combat.

SOAR TO ORIGINAL SOUNDTRACKS

All new games from Spectrum HoloByte incorporate music and sound as key elements, and support the major sound cards. The original Russian themes that enliven every level of Wordtris and other 'Tris games were

commissioned from San Francisco composer Ed Bogas. Falcon 3.0's riveting musical soundtrack was written by professional musician Paul Mogg, head of Spectrum HoloByte's own audio department. Its sound effects will make your heart pound and your palms perspire.

SPECTRUM

HOLOBYTE

DO REMEMBER BY A GAME

SPECIAL EFFECTS WIZARDRY

Spectrum HoloByte games feature some of the highest quality graphics in the industry thanks to our growing staff of visual artists, including some who are experts in translating video and special effects into sizzling software entertainment. Their graphics expertise is also being used to move the company rapidly into the emerging fields of CD-ROM and virtual reality software.

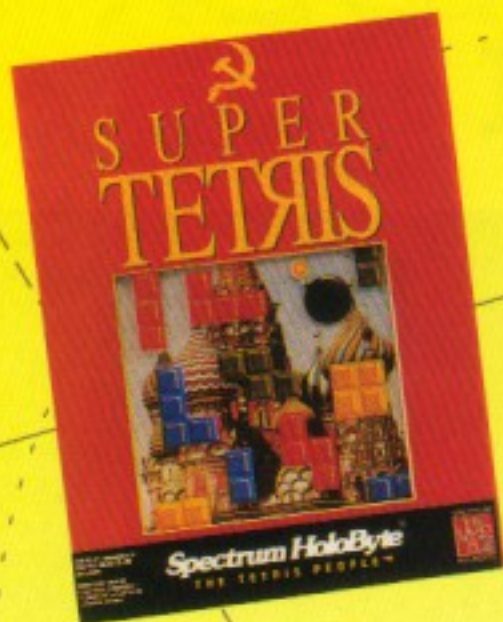

GO HEAD TO HEAD WITH THE BEST

There's only one thing more exciting than pitting your skills against a Spectrum HoloByte game, and that's pitting them against a real-life opponent. Most of our games feature head-to-head competition against your friends, whether across the office or across the country. Look for the red Head-2-Head logo on our games as your clue to games that will connect your computers by modem, a direct cable link or network. You'll even be able to connect different games. With its Electronic Battlefield Series, Spectrum HoloByte will be the first to bring you two or more separate games that can be connected for simultaneous play. Warthog A-10 and Falcon 3.0 will begin the series of simulations that will link together in a realistic, multi-craft battle theater.

Is it a game, or is it reality? It's a whole new dimension of fun from Spectrum HoloByte.
