

Errata

This Adaptec kit contains one of these DuoConnect cards:

- A card with three USB ports and two FireWire ports (without internal power connector)
- A card with four USB ports and two FireWire ports (with internal power connector)

The included *Installation Guide* and *User's Guide* document the card with three USB ports; this *Errata Sheet* provides additional information for the card with four USB ports.

If your DuoConnect card has four USB ports:

- 1 Install the card into your computer, following the instructions provided in the *Installation Guide*.
- 2 Connect the four-pin power connector to an available power supply connection inside your computer. (Refer to your computer's documentation to identify and verify power supply connections.)
- 3 Close the computer cabinet, reattach the cables, then turn on the computer.
- 4 Install the device drivers, following the instructions in the *User's Guide* (included on the CD).
