

Apple Media Tool User,

Welcome to version 1.2 of the Apple Media Tool!

This release includes the following new features:

- Macintosh runtimes are now native for both Power PC and 68K Macintosh computers. Although the user interface and documentation haven't changed, selecting the "Macintosh" option in the Apple Media Tool Runtime Maker will generate a runtime of your project that is native for both Macintosh processors.
- Apple Media Tool now supports QuickTime™ and QuickTime for Windows 2.0. Both versions of QuickTime are included in this release.

Based on user input, we have also changed the Apple Media Kit Licensing and Distribution Agreement. The new license allows enterprise customers to site license Apple Media Kit runtime code, QuickTime and QuickTime for Windows for internal use in conjunction with Apple Media Tool projects. This change will facilitate the use of Apple Media Tool for enterprise applications. Please look at the enclosed Apple Media Kit License package for details.

We appreciate your business and thank you for your purchase of the Apple Media Tool.

The Apple Media Kit Team
