

Level Select

Hold down option and command while selecting new to start at any level.

Very Hard Network Game

At the Menu, type in Command+M and you will be able to select a network level.

Select a level, enter it, and you will find that you can select your people on your team and the network level turns solo. The bad thing is that the level hardness goes to the hardest.

Cheat Codes

To use these cheat codes, you absolutely need version 1.2 or later. If you don't have it, download the patch.

How the codes work: While playing, press and hold the control button while you type the code. If you have the control button set as your trigger, you may run into some problems (codes not working). To solve this, select the bayonet before using the cheat code.

The cheats from hell to nimrod were released by Paranoid Productions at the same time with the v1.2 updater patch. The rest were reported by players who discovered them.
