

## ColorGeniusEX CD-ROM Information

25/8/2005

Thank you for choosing the FT-S5000. This manual includes outline explanations of all the products contained in the ColorGeniusEX CD-ROM and the location of each respective "Installer". For more detailed information on each product, please refer to the "ReadMe" or PDF files in each product's folder, or read the manuals on the CD-ROM or enclosed with this package.

### • **Attention**

The ColorGeniusEX CD-ROM includes a variety of programs. Before installing any of them, however, be sure to study the "ReadMe" files in the folders which contain their respective Installers.

### • **ColorGeniusEX**

The setup software for the FT-S5000 has been upgraded and reissued as ColorGenius EX. Various functional aspects of the software, including quality, productivity and usability, have been enhanced and improved.

This software has also been modified to support Mac OS X. For details, refer to the relevant manuals.

### **Installation procedure**

Double-clicking on "ColorGeniusEX2.0.7..." in the "ColorGeniusEX V2.0..." folder starts up the ColorGeniusEX Installer.

### **Precautions when installing ColorGeniusEX**

If the installer for Mac OS X does not work correctly, try the following installation procedure.

1. Copy the installer from the CD-ROM to the Macintosh volume and then perform installation.
2. For Mac OS X, you cannot install the software in the specified folder according to conditions for a login user or system area. In such cases, try to change the volume in which the software is installed.
3. A dialog box concerning CoreService may be displayed repeatedly during installation and a dialog box for entering the user name of the administrator and the password may be displayed. In such cases, cancel the dialog box and continue installation.

## **Manuals**

Manuals for ColorGeniusEX are included in the "ColorGeniusEX V2.0..." folder.

- **FT-S5000 firmware**

- **Downloading firmware**

If you are already using the FT-S5000 with any FT-S5000 firmware version earlier than v2.1, be sure to start by installing ColorGenius EX on a computer running Mac OS 9, and then use "FT-S5000 Maintainer" to download the latest firmware. As ColorGenius EX will not operate normally under Mac OS X with firmware earlier than v2.1, any image downloaded to ColorGenius EX under such an environment will fail.

- **Fit**

The profile maker software, "Fit" cannot be used in Mac OS X. It will work only in Mac OS 9. We have included a new version of Fit (profile maker software) which helps you set up a color matching system optimized for your specific environment. Use Fit to create or edit monitor profiles or ColorGeniusEX CMYK conversion profiles.

## **Installation procedure**

Double-clicking on "Fit Installer" in the "Fit V1.1" folder starts up the Installer.

## **Manuals**

The Fit Users Manual is enclosed with this package.
