CD-ROM

How to install and run Journey to the Planets:

1. Turn on your computer and start Windows.

Ensure that your CD-ROM drive is turned on if it is an external model. Place the disc in the CD caddy, if your drive requires it, and insert the disc into the drive.

2. From Program Manager, access File Manager.

Click on the letter representing your CD-ROM drive--we'll use 'd' for this discussion.

3. Find the install.exe file in the d: drive and double-click on it.

4. Answer all installation questions that appear on the screen, and the program will create an icon for the title once the installation is complete.

Exit Windows and re-boot your computer before running this program.

5. Afterwards, simply double-click on the Planets icon to run the program.

6. *For the Macintosh, place the "Journey to the Planets" disc in the CD caddy, if your drive requires it, and insert the disc into the drive.

7. Then double-click on the "Read Me First" icon, and follow the installation instrictions.

Options Palette

Print a summary of data for each planet.

Bibliography.

Planet Sub Menu

Clicking on the solar system graphic always returns you to the Solar System screen (the Main Menu).
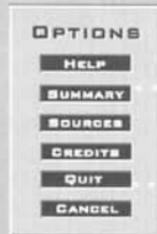

Main Menu

Your journey to the planets begins here. Position the cursor over any of the planets or the Sun and click once to arrive at the heavenly body of your choice. Glossary and Options controls are available from anywhere in the program.

Click here to access your companion dictionary of astronomical terms found throughout this program.

Click once on any caption ending with "..." for scrollable descriptions about the image.

Click on each picture to display a full-screen image.

The planet button brings you back to the previous menu.

Planet Menu

Each Planet Menu offers several areas to explore, such as: Tours – 3-dimensional, virtual tours of each planet's terrain; Exploration – Earth's missions to uncover the mysteries of the planets; and, Data – an interactive log of astonishing facts.
