

Important Information About Your Language Kit

Your language kit contains the Language Kit Updater for Mac OS 8. This free software updates your Apple Language Kit for compatibility with Mac OS 8 on your Mac OS-compatible computer.

Installing the updater software

You install the Language Kit Updater for Mac OS 8 after you've installed the language kit software. To install that software, follow the instructions in the manual that came with your language kit.

To install the language kit updater software, follow these instructions:

1 Turn off virus-detection software.

If you have any virus-detection software installed on your computer, turn it off. Some virus-detection programs may interfere with the installation process. Remember to turn on your virus-detection software when you're done with the installation.

2 Quit any open application programs.

If you haven't quit all programs, a message appears when you attempt to install the software telling you that some applications remain open and need to be closed.

3 Insert *Language Kit Updater for Mac OS 8 Install Disk 1* into your floppy disk drive.

The *LKU Install Disk 1* window appears.

- 4 Double-click the Installer icon to open it.**

A Welcome screen appears.

- 5 Click Continue.**

The software license agreement appears.

- 6 Click Agree.**

The installation dialog box appears.

- 7 Make sure the disk named in the Destination Disk section is the one where you want to install your language kit updater.**

You must install the updater on the same hard disk as your language kit. If a different disk name appears, click Switch Disk until you see the name of the correct disk.

- 8 Click Install.**

Follow the instructions you see on the screen.

A message may appear that tells you to insert *Language Kit Updater for Mac OS 8 Install Disk 2*

- 9 If you see a message telling you to restart your computer, click Restart.**
