Now you can cut or copy any number of selections in a row and paste them into any application, in any order, without even opening the scrapbook. **Cut, cut, copy... paste, paste, paste... It's THAT easy!** And you can do it all without losing any information, tediously opening your old scrapbook or switching applications!

The NEW MultiClip PRO is a superfast scrapbook and clipboard replacement that lets you have **multiple clipboards and scrapbooks** to **save time and effort, quickly clip text and graphics while Surfing the World Wide Web** or collecting information and e-mails in your favorite Online Service **saving you time and money, back-up** everything you cut or copy, **find anything in a flash** and even **crop and edit** your clippings for a perfect fit.
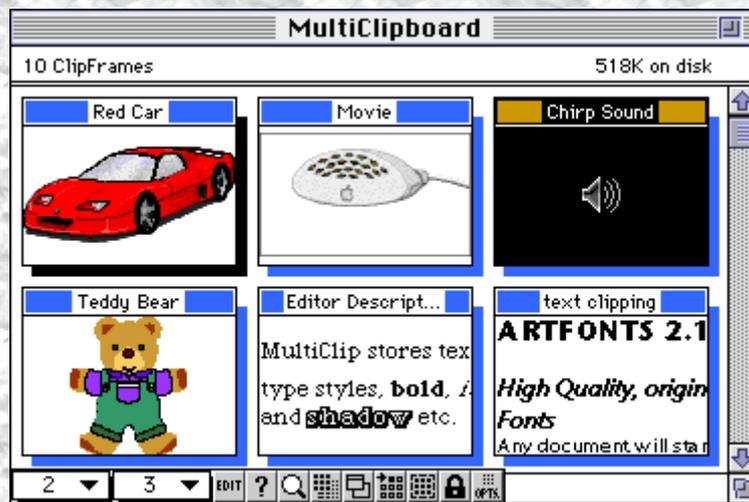

You can use MultiClip PRO as a place to keep pictures, text, charts, movies and sounds that you need FAST access to. Build a graphics library, keep letterhead designs to paste into your memos, compose letters from boilerplate paragraphs, and store all those interesting bits of information from the Internet to easily use again or pass on to fellow Mac users!

How many times have you cursed when you realized that your Mac destroyed your clipboard contents when you copied something new? **Never Again!** MultiClip PRO doesn't trash your current clipboard contents when you copy something new and keeps multiple clipboards when you want it. **MultiClip PRO remembers everything!**

Imagine the time you'll save when you open MultiClip and all your clipboards are still there! You can, for example, cut or copy separate paragraphs of a letter and paste them each back, in any order you want and without opening your outdated, one-clipping-at-a-time scrapbook.

MultiClip PRO even lets you even lets you **print clippings** in a variety of layouts (including thumbnails). And it is so convenient that you can actually **name the clipboards for easy access** and even **paste them by name** in ANY application **from a handy pop-up menu**!

Copy or import graphics to instantly organize and build a collection of hundreds of clippings - no more lost images! You can even create alias clipframes to catalog the graphics on your favorite clip art CD-ROM.

MultiClip PRO also plays QuickTime movies and Cuts, Copies or Pastes frames or sequences. It even imports/exports **Apple Scrapbook, Now Scrapbook, EPS, PICT, GIF, JPEG, PICS, Sounds, aliases, or any file format you have an XTND translator for!**

So if you want to see what a quantum leap the Mac clipboard and scrapbook have taken, check out MultiClip PRO, they every day utility no Mac user should be without! Our [download the Demo](#) version for a real Test Drive!

Here's the Clipboard AND Scrapbook replacement you've been waiting for!

After you check the features and benefits below, you will not be surprised that MacWorld Magazine named **MultiClip PRO** one of the best enhancements for your Macintosh along with **RamDoubler, QuicKeys, SAM, Now Utilities and Conflict Catcher !** (The Best Products to enhance the Mac OS - Cool Features that Apple forgot, MacWorld June 1995)

"MultiClip PRO is a replacement for the Mac's Clipboard and Scrapbook; it's so simple and elegant that it makes you wonder why Apple hasn't yet adopted it" - MacWorld, April 1995

Features at a Glance

MultiClip is a multiple Clipboard and Scrapbook replacement that "*puts the Apple Clipboard and Scrapbook to shame,*" according to **MacUser Magazine**. Well, it's no secret that we at OLDUVAI feel the same way about MultiClip PRO, and hope that you will too.

Let's take a look at what MultiClip is, how it works, and what it has to offer to the Macintosh user:

We call MultiClip's files **Collections**, these are "Scrapbook like" documents where you can store an unlimited number of clipboards (which we call **ClipFrames**). Unlike the Apple Scrapbook, you can see multiple items at the same time in the same file, select a list view of the clipboards, drag items between Collections, search through quickly, print thumbnails, import text and graphics files, and **much** more.

The difference between the static single Clipboard that the Mac offers and our ClipFrames is that you can have unlimited ClipFrames, name them, change the view, change the name, **play** movies or sounds, and **edit** each individual ClipFrames be it text or graphics.

In addition to all of that, MultiClip also allows you to **copy and paste multiple times**, without losing a single bit of data, and without switching applications (unless you want to!) Just sit in your favorite word processing application, copy several items in a row, open a new document and past them all back in, in any order, or use the handy pop-up menu to select them by name! **It's never been more convenient or powerful to copy and paste.**

And, MultiClip can even be used at the same time as, or in conjunction with, the regular Scrapbook and clipboard!

Copy and Paste faster than you ever have before!

Speed is one of the most important features in any software package. Your time is valuable, to yourself and others. Copying, pasting and managing graphics files quickly and easily is the reason you purchased MultiClip PRO in the first place. **This new version is amazingly fast on all Macintosh models**, but with the PowerPC accelerated version you can expect **AMAZING speeds**! You asked for it! And now, with MultiClip PRO 3.5 you can be Faster, more organized and more productive than ever before!

Copying Multiple clipboards into MultiClip.

Fast, versatile and productive, MultiClip PRO not only allows you to copy multiple clipboards, but it offers **several** different ways to do it, pick your favorite!

To quickly copy and number of items from your applications, without ever leaving them, just use the handy **Hot Keys**. Command-Option-C will send any selected item directly to MultiClip PRO, with no need for you to leave the application you are in! And as with most things in MultiClip PRO, Hot Keys are **fully customizable**.

For those special occasions, when you need more control of the copying process, you can call from within your application (Yes, without switching applications!) a **Special Copy** dialog box. The dialog box allows you to name your ClipFrame, designate the open collection file you would like it stored in and **much** more.

Not only can you automatically place all your clippings directly into MultiClip PRO, but if you have multiple Collections open, you can **designate a different copy Hot Key for each collection**. Imagine having separate files for different items, and organizing new items as you copy them.

And MultiClip PRO is intelligent about your clipboards, it **remembers the order in which you copied them in the first place**, and will let you paste them back in either the same order you copied them, or reverse!

Pasting Multiple Clipboards from MultiClip PRO!

Because MultiClip PRO has remembered your original clipping order, **pasting items back is a breeze**. It's like having your own **carousel of clipboards**. Depending on your preference for forward or reverse order, MultiClip will **cycle through all your ClipFrames**, pasting each one in turn.

But, that's not all! After all, you won't always want to paste a series of items, sometimes you'll just need to paste one specific ClipFrame, like adding the graphic of your signature to the bottom of a letter. In that case, use MultiClip's **handy pop-up menu** from within in any application to select the name of the ClipFrame you would like to paste. **This is the handiest tool ever available for pasting, instant access to a complete selection of items.**

When you need **complete control of the pasting process**, or wish to select a number of items at once, you can call up the Special Paste dialog from inside any application. When this dialog appears, you will be able to **preview all of the ClipFrames in any open Collection**, refer to their information, and **select several of them to be pasted in a row**. You can even tell MultiClip to put a tab, space or other character between them!

When you are working with an organized set of ClipFrames, **you can paste them directly into your document, by their number**. Pressing Shift-Command-1 will paste the first ClipFrame, and pressing Shiftp;Command-12 will past the twelfth ClipFrame.

When you are working directly in MultiClip PRO, and have documents open in other applications, you can **select a number of ClipFrames, and then send them to the application of your choice** from the ClipFrame Paste In Application submenu. MultiClip will send all the selected ClipFrames to the application, in order, using AppleEvents.

You can have Multiple Collections opened at the same time

You can open unlimited MultiClip files (collections) at the same time and even drag and drop ClipFrames from one Collection to another to organize your data. And MultiClip PRO allows Multiple Selection of ClipFrames, so you

can select the ones you want and perform commands such as duplicate, drag-copy to another collection, paste, export, delete, change the image reduction, etc, to perform the change to all the selected clipframes at the same time. **Work Faster and more organized!**

Clipboard Backup Mode

MultiClip intelligently protects each and every item you copy, never deleting an item unless you tell it to. You can even ask it to work in conjunction with the Apple Clipboard. MultiClip can make a backup copy, to its own files, of every item to copy to the Apple Scrapbook with the normal Command-C.

Clip information fast on the Internet - Save time and money

If you are an internet surfer, you'll find MultiClip PRO an invaluable tool for clipping, storing and recalling all those little snippets of information and graphics. Just copy down an email address, or web page address, store it in MultiClip, and recall it whenever you need it. It's also great for grabbing pages of pertinent information for use later, or pasting in messages to co-workers, etc. **Work with the Internet Faster!**

Edit your Clipboards

Not only does MultiClip PRO let you keep and manage large amounts of data, but you can also easily edit text and graphic clippings, right in MultiClip. **Work with Text and Images more efficiently!**

Doublep;clicking on your graphic ClipFrames will open window with tools allowing you to **select a portion** of the image, **erase**, **scale** or **crop the image** down for a perfect fit in your document.

Doublep;clicking on a text ClipFrame will open a word processing window, allowing you **edit, add or change text, font sizes and styles**. Or **select** just **a portion** of the text to copy.

Work fast with HOT keys

Hot Keys are keyboard shortcuts that give you immediant access to MultiClip PRO's power from within any application. Copy multiple selections to MultiClip, paste multiple selections from Multiclip in many powerful variations, all without ever leaving your current application. And, MultiClip PRO's Hot Keys are fully customizable; just change them to suit your working style and needs, and MultiClip PRO will comply.

Drag n' Drop clipframes to and from your favorite applications!

MultiClip PRO now takes advantage of the **convenient Drag 'n Drop function** introduced in Apple's System Software 7.5! Select anything (a word, sentence, paragraph, picture, etc.) in your favorite Drag 'n Drop compatible application and drag it right into MultiClip PRO. A new clipframe will be created, just as if you had copied the item! And the reverse will also work. It's easy to grab clipframes and drag them to your favorite application and drop them in, ready to GO!

Sort clipframes by different attributes just like in the Finder!

MultiClip PRO allows viewing clippings as thumbnails or as a sorted List like in Apple's Finder. Organize your clipframes by name, size, date and kind. Click on the headers to sort or use the View menu. **Easier to find, Faster to scroll and more Info at a glance.** Does your Scrapbook do this? The lists makes it easy!

Find clippings by name, text, format, keyword and more

Find ClipFrames by several criteria: Text, Formats and Keywords (you can combine all options). MultiClip searches text inside the ClipFrame contents, in their names or comments (and for aliases it will even search the original document). You can search simultaneously in ALL open collections. No more "guesswork" to locate your information. **MultiClip PRO finds your clipboards instantly!**

Automate Complicated Tasks Easily with AppleScript!

Now you can **program MultiClip to perform complicated, or simple, tasks for you automatically**! With the help of AppleScript and a very simple, Englishp;like scripting language, you can do AMAZING things.

Imagine working on the company's new catalog, handling all those product numbers, descriptions and pictures. Now you can **use MultiClip to make your life easy**! Click on the product name in Quark Xpress, and have a Script that copies it, searches in FileMaker Pro for the product number, and pastes it into your document, then searches in your MultiClip Collections for the appropriate product picture, and pastes that for you as well! **The possibilities are UNLIMITED!**

New, super reliable architecture ensures 100% compatibility

Full Reliability and Compatibility is our #1 Priority. **The new architecture is 100% compatible with all known applications and extensions. No conflicts!**

Get Full information about ClipFrames and Groups!

Now you can add/change names and comments to your clipboards for easy searches. Add Keywords to select the clipframes you want with just one click. MultiClip PRO 3.5 shows more ClipFrame information such as date, time, size and originating application. Expert Options allow removing formats from a ClipFrame and changing the preferred editor. Select multiple ClipFrames and get information about a group (global size, formats, etc). You can now modify the image reduction level for a single ClipFrame or for a group, and even designate a Power Key Macro! **More information = More Flexibility = More Power!**

Shortcuts for your favorite commands

All MultiClip PRO 3.5 Collection windows feature a handy toolbar that will give you "one click" access to important commands such as: Edit ClipFrame, Get Info, Search, Show List or Thumbnail view, change the number of ClipFrames shown in the window and more. Now **it takes no effort to use your favorite commands.** A Great Time Saver!
Edit Graphic clippings with your favorite Plug-in Filters!

Edit your graphics ClipFrames in any number of ways, just by letting MultiClip PRO know where your **favorite Photoshop Plug-in filters** are located. You'll be able to **apply these filters to your images**, in a Picture Editor Window, just as you would in Photoshop.

Crop and Scale Images with the Picture Editor

These easy-to-use Tools include: 3 Selection modes (Marquee, Lasso, Polygonal Selection), an Eraser and a Cropping Tool. Scale any image by percentage or to fit in an area in inches, centimeters, points, picas or pixels. You can open different editors (Text, Image, etc) for the same clipping. **Whether you have to scale them or crop them, MultiClip PRO has all the tools to make your images fit perfectly in your documents!**
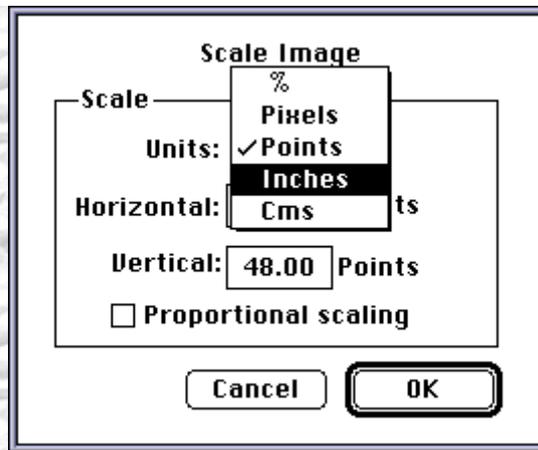

Full Control over Text

The text editor allows you to edit text with multiple fonts, sizes and styles. It also features a **Find/Replace** command and several handy text tools such as convert text to ALL CAPS, small caps, Sentence or Word capitalization. You can now join several Text ClipFrames into one and you can sort all text clippings alphabetically.
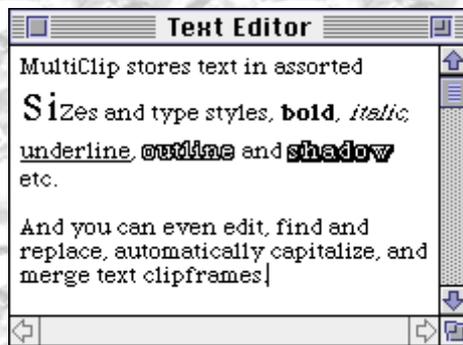

Automatically names text clipframes and more

MultiClip PRO automatically assigns names to all ClipFrames as they are copied based on your preferences. There's no need for you to type names for Text ClipFrames, MultiClip can use the first few words to name Text ClipFrames, and the name of the application to name Graphic ClipFrames. **Save Time!**
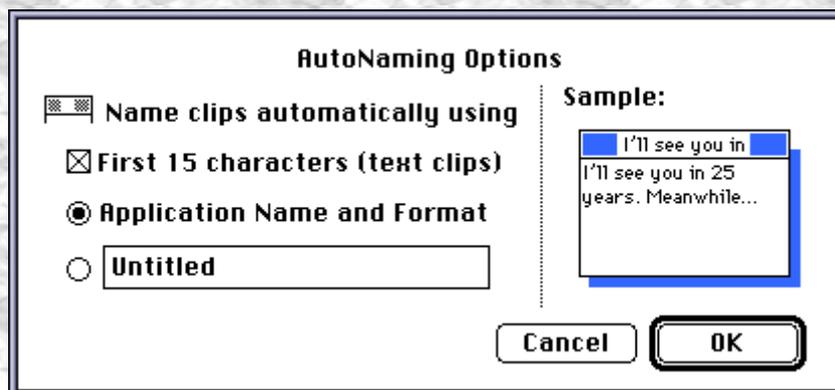

Powerkeys

Now you can **add the Power of macros and automated tasks** to your pasting! Either select one of the built in options such as a carriage return, a space, tab or comma character, or design your own custom PowerKeys! You can create PowerKeys that add a trailing character after a paste or save your document with a Command-S after pasting in your signature clipframe. Just specify a keyboard sequence to follow ANY MultiClip clipframe's paste! **Imagine the time savings**!

## Supports more file formats!

First of all, we've added what many users have asked for; built in JPEG filter! Now you can import high-resolution JPEG and GIF images! But, we didn't stop there! **Now you can also take advantage of any Claris XTND Translators you already have!** Many products install XTND translators, you may already have the ability to import to MultiClip from TIFF, Microsoft Word, MacWrite, RTF, AIFF, PhotoShop, WriteNow, WordPerfect, ClarisWorks, Windows BMP, CompuServe GIF, AppleWorks, Kodak Photo CD, PCX, Sound Edit and many more!

Easy, Instant Presentations!!!

MultiClip PRO features the most easy to use, yet powerful, slide show available. Just select the clipframes you want and click on PLAY. MultiClip PRO shows your clips (with text, images, background music and even movies) one after another. You can set options like time between frames, click to continue or Full screen. **Now you don't have to be an expert or spend hundreds of dollars to set-up a presentation.**

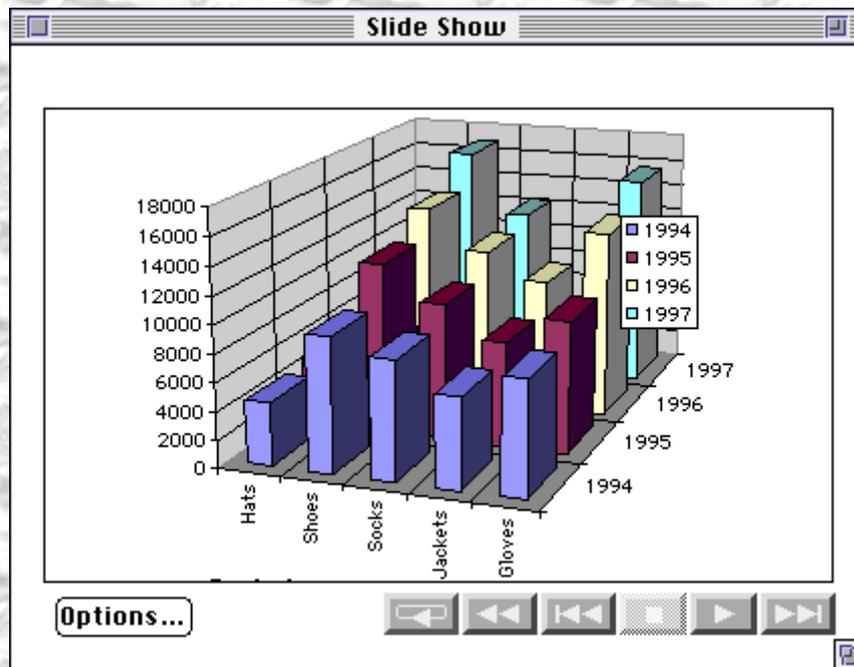

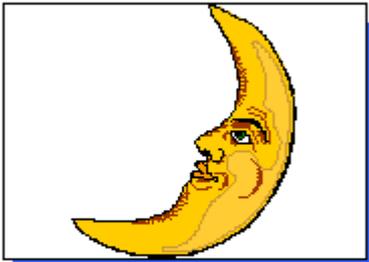

Just Remember Two Master Keys to unlock all MultiClip PRO's Copy and Paste Power

SPECIAL COPY: One easy to remember Hot Key will make this dialog appear in any application. You can preview the selection you are about to copy (and view information about it). The new ClipFrame can be named and comments may be added. You can place the new clipboard in any open collection and even append the selected text to the previous clipframe. **Organize your clippings as you copy!**

SPECIAL PASTE: One easy to remember Hot Key will make this dialog appear in any application. You can preview the selection you are about to paste (and view information about it). The ClipFrame's name and comments can be viewed. You can pick ClipFrames to paste from any open collection and even append clipframe. **Select as many ClipFrames to paste as you wish!**

Play your Movies. Select your favorite scenes.

Now you can Play QuickTime movies and Cut, Copy & Paste single frames or movie segments within MultiClip. Just double-click on a QuickTime ClipFrame (copied or imported) to open the Player. You can copy a frame (or selection of frames) and play one or several movies at the same time even with sound control (it also handles QuickTime-compressed images transparently). **No need to spend $ hundreds in presentation software or QuickTime Editors**!

Power for Multiple Cut, Copy & Paste

Don't you hate it when you copy something and your Mac erases your previous clipboard? **MultiClip will change that forever**. Hot Keys are at the heart of MultiClip's power to copy and paste data in any application. We added more commands such as Copy and Append text to the last ClipFrame, Skip the next ClipFrame in line, Reverse the Paste order and more
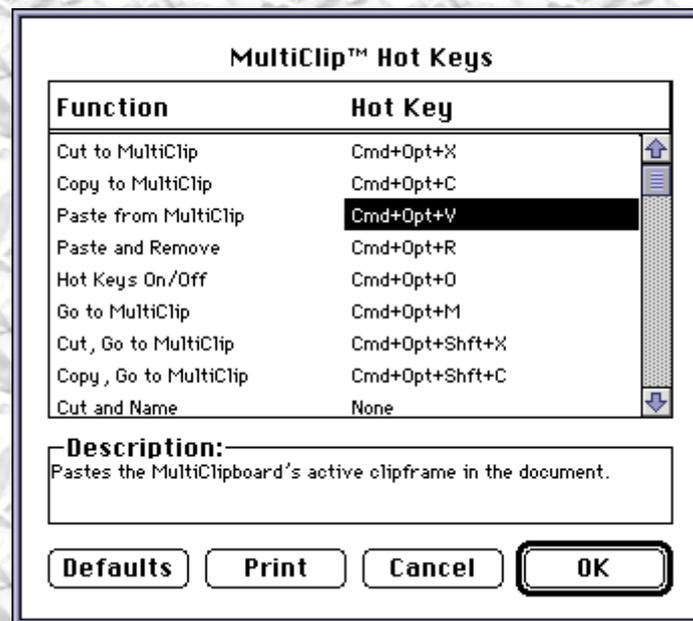

Label your ClipFrames with Keywords for instant selection.

You can now "label" your clipframes with one or more keywords to categorize your information. For instance, if you label all clip art with computer images with the keyword "Computer" MultiClip PRO will instantly find those images with a single menu selection! It can't get any easier than that. **Retrieve your information instantly!**
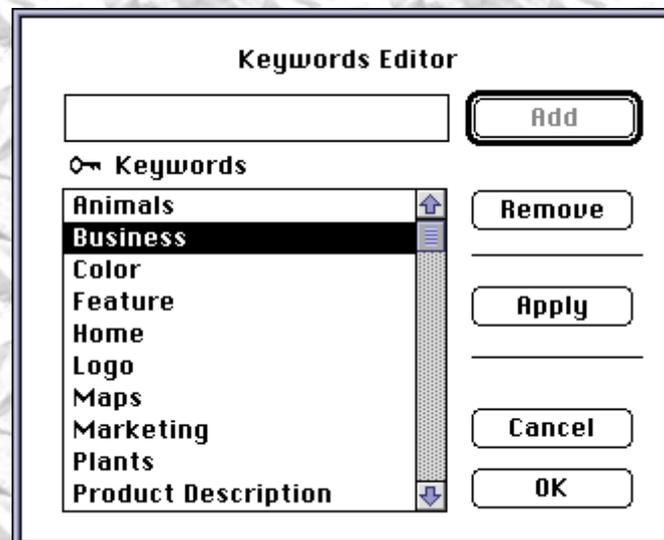

Save disk space by using "Aliases" of the real files

New Alias ClipFrames help you organize your information without wasting additional disk space or RAM. Aliases are "pointers" to the original file on disk, so you can keep hundreds of large clipframes (movies, 24 bit graphics, etc) using a fraction of the memory and disk space it would take to hold the real files in MultiClip PRO Collections. And you can perform all MultiClip commands on Aliases (such as find text, edit, etc) as if they were the real files. **When you Paste the Alias, MultiClip will instantly (and transparently) find the original file and Paste it in your document. Wow!**

Clipframe size controls

In previous versions of MultiClip PRO the clipframe size was based on the number of rows and columns of clipframes you asked MultiClip PRO to display. **Now you can have total control of the size of your clipframes**, simply by clicking on the corner of a clipframe, and dragging until the frame is the size you want. Perfect when you need just the right size to view the contents of individual clipframes better, or see more of then at once! And, you can lock this size in so that it will remain, no matter how you resize the window, just by clicking on the new Lock Button.

Organize sets of clipframes to paste together in order!

Now you can keep your **clipframes organized in GROUPS** within your collections, **change their order** in the group, and **paste them together** as a group. Clipframes can be 'members' of more than one group. And, changing the order items paste in the groups is as simple as clicking and dragging! Imagine keeping your name, titles, company, home and club affiliates all parts of different 'signature' groups. When you need those items they can all be pasted together in a letter with one command!

Make MultiClip PRO work "your way"

When we asked our users why MultiClip is their scrapbook replacement of choice the answer was simple: the ability to fully **customize** their **working environment** to meet their needs so they could **work faster** and more productively.

So we decided to greatly enhance this capability.

You can now set the window appearance to anything you want and the layout can be different for each collection. You can choose the number of thumbnails in the windows (or the attributes in the collections you wish to view as lists). You can hide the names on the image clipframes. And you can even set a different reduction level to preview each different clipframe or group. Or pick a color for each window to easily spot them in the desktop. **The list goes on and on.**

You are one of a kind and your working environment should be as well. That's why we added the ability to make MultiClip work exactly as you work.

Use the Apple Scrapbook as a MultiClip collection

MultiClip is 100% compatible with Apple's Scrapbook. You can even open your active Scrapbook, use it as a MultiClip collection with all its powerful features and then close it. And you can export collections as scrapbooks!

## We've redesigned MultiClip's dialogs with you in mind!

One of the greatest advantages of MultiClip PRO has always been that its EXTENSIVE features are customizable to work they way YOU want. **Now all the power of these customizable features is easier for you to access, use, understand and control!** Never before have you had this much easep;of-use, power and flexibility in a program before!

Paste Multiple clipframes at the same time

MultiClip PRO allows Multiple Paste with several commands. Just select a bunch of ClipFrames in a collection and choose the name of the application where you want to paste from the Paste in submenu. Save time with Multiple Paste!

Copy to the collection you want with a new Copy Key

You can now assign a custom copy key for each collection, so you can organize your work as you copy. Just select **Collection Info** and customize your **Collection Copy Key** for all the collections you want. The next time you want to copy directly to a particular collection, press its unique key combination and MultiClip PRO will place the copied selection in the collection you want. **Imagine the time you'll save when you copy all material for a certain project or application directly to a collection that gathers that kind of information.**

Hundreds of features to increase your productivity

MultiClip PRO will make your work with the Mac easier with features such as: Create new text ClipFrames, Show Current Clipboard, Scroll to selected clipframe, Show active clipframe, Tile windows horizontally, vertically or as a grid, Windows menu to select any open collection, Menu that shows recently opened applications, Powerful and extensive Undo feature, Select All, Save a Copy of the collection, Revert to saved, Extract keywords from other collections, Select your default Paste collection from a pop-up menu, and **much, much more**

Exchange data with all applications

MultiClip PRO imports Apple Scrapbooks, Now Scrapbooks, old MultiClip files and (as separate ClipFrames) a wide variety of file formats such as text files, JPEG, GIF, PICT or EPS images, sounds, QuickTime movies, etc. It is Easy Open compatible, and Claris XTND Translator compatible for more import capabilities. You can import the entire file contents or create Alias ClipFrames (pointers to files that save RAM and disk space) with files of ANY format.

You can import ALL files in a folder as ClipFrames at the same time. The Export feature automatically saves all selected ClipFrames as separate files. You can also save your collections in Scrapbook format.

Easy to Use Apple Technologies

MultiClip PRO takes full advantage of all System 7.5 power features: AppleScript, Drag 'n Drop, Apple Events, Easy Open, QuickTime, Publish & Subscribe, Smart Memory, Balloon Help, Aliases and much more

And Much MUCH more!

And that's not all we've added to the program. In our quest to give you the best upgrade value possible, we've included tons of new features, many requested by you, our users!

The new version also adds **Improved Slide Show** features, so you can select the size of the show window; a **System Profile** function to improve **Technical Support** response times; a built in **Launch at Start-up** control, so you don't need to install any special files in your system; INformation on the **Pixel Size** of a graphic, included in the Get Info dialog, the ability to **remove recent collection names** from the Open Menu, and **much, much more!**

It is so easy to use that you will be instantly taking advantage of its full power.

You don't have to take our word for it, Here's what the Press has to say about MultiClip PRO :

Version 3.5 has not yet been reviewed by any of the magazines, but you can check up on mentions and reviews of earlier versions of MultiClip at the following sites!
