README - ReVision version 1.1

What is ReVision?

ReVision is a ReWire host that allows you to sync a compatible ReWire device (for example Propellerhead Reason or Ableton Live) with a QuickTime movie in order to compose a soundtrack.

What's new in 1.1.1

 dB level indicator

What's new in 1.1

 Optional Tempo and Time Signature changes at Markers.
 Load all the ReWire device you have at one time.
 Audio level monitoring and clip indicator.
 AIFF export up to 24 bit/96 kHz resolution.
 Optional demo movie export with new soundtrack.
 Movie start offset adjustment. Skip any preamble.
 Settable TimeCode origin for timecode syncing.
 Scrubbing enhancements - use keyboard arrow keys, scrollwheel mouse,
  mouse dragging over the movie, or the new slider control.
 Start/Stop the playback with the space bar.

 Now works without a QuickTime movie for users wanting access to the tempo/
  time signature and SMPTE features alone.

Requirements

Mac OS X 10.2 and above.
A ReWire 2.0 device capable application such as Propellerhead Reason, Ableton Live or Celemony Melodyne.

Installation

Just drag the ReVision icon to the Applications directory of your choice, however ReVision must be on the System Disk in order to find the ReWire shared library.

Using ReVision

Please refer to the User Guide accessible from the ReVision Help menu.

Registering ReVision

Until you register ReVision you will be unable to save documents and the program

will automatically quit after 10 minutes. To Register start the program and choose the "ReVision->Register..." menu item.

Bugs, Issues etc.

None at this time.

This software is completely without warranty.
Please contact us with any bugs, feature requests, issues etc.
