Welcome to SuperGOO

Kai's SuperGOO is the evolution of the fabulously successful Kai's Power GOO, the latest release of Liquid Image™ "Funware" from MetaCreations.

All the fun you had GOOing faces and pictures has been greatly enhanced, and the FUSION Room now has its own library of facial components you can pick from.

What's New?

If you're a user of GOO this section will give you a head start on locating, learning and taking advantage of SuperGOO's new features.

The GOO Room

The GOO Room still lets you play with images as if they were made out of liquid paint, but several improvements have been made to the basic GOO functions:

- Zooming and Panning
- Customizable Brush Sizes and Functions
- Support for non-square images (images at any aspect ratio)
- Support for Alpha Channels

The FUSION Room

Before, you could use the FUSION Room to merge two pictures together to make a new goofy image. Now, the FUSION Room lets you create faces using a host of facial features. You can add a nose, mouth, eyes and hair to a blank face to create your own original face. These features are included in a library that comes with the application.

Installation

This section provides instructions for installing the Windows and Macintosh versions of your SuperGOO software. Follow the instructions appropriate for your system

Windows Installation

Minimum System Requirements

SuperGOO runs on any PC compatible computer with the following minimum configuration:

- Pentium Processor
- Windows 95 (or higher)
- Windows NT 4.0 (or higher)
- 16 MB Free RAM
- 25 MB HD Space for Install
- 40 MB Free HD Space (after Install)

- CD-ROM Drive
- 16-bit video
- 14" Monitor

Installation

To install your SuperGOO software:

1. Insert the SuperGoo CD-ROM disc into your CD-ROM drive.
2. If you are using Windows NT 4.0, select **File menu> Run**.
If you are using Windows 95, select **Start menu> Run**.
3. Type the letter corresponding to your CD-ROM drive, followed by “:\setup (for example, type “d:\setup” if using the D drive).
Click the OK button, then follow the prompts.
4. If in the main install window, click “Install.”
Please be certain that you have at least 25 MB of free space on your hard disk before you install.

Macintosh Installation

Minimum System Requirements

SuperGOO runs on any Macintosh computer with at least the following configuration:

- Power Macintosh
- MacOS 7.6.1 (or higher)

- 16 MB RAM allocated to application
- 25 MB HD Space for Install
- 40 MB Free HD Space (after Install)
- CD-ROM Drive
- 16-bit video
- 14" Monitor

Installation

To install your SuperGOO software:

1. Insert the SuperGoo CD-ROM disc into your CD-ROM drive.
2. Double-click on the SuperGoo Install icon to begin installation.

Installation Tips

Windows 95/NT 4.0:

Please be sure that:

- Your operation system is Win95/NT4.0. SuperGoo will not run on Win 3.x or NT 3.x.x.
- Your display is set to a minimum of 16-bit colors (65,000 colors). We recommend 24-bit (true color).
- You are using a Pentium processor or “Pentium class” processor. SuperGoo will NOT run on a 486.

- There are no open applications (other than Win95/NT4.0, of course).
- There are NO applications running in the background. This includes anti-virus software, crash monitors or system diagnostic software.

Power Macintosh:

Please be sure that:

- Your operating system is 7.6.1 or higher.
- Your display is set to a minimum of 16-bit colors (65,000 colors). We recommend 24-bit (true color).
- You are not running Virtual Memory or any RAM enhancing program such as RAM Doubler.
- Please be certain that you have at least 25 MB of free space on your hard disk before you install.
- You might receive an error message while attempting to launch SuperGoo which states “The application SuperGoo could not be opened because axiom could not be found.” This means that the Macintosh does not have enough memory left after launching SuperGoo to load the necessary “axiom” extension.

About This User Guide

This user guide provides all the information you need to get the most out of Kai’s SuperGOO. It will help you learn the application and serve as a reference as you attempt more sophisticated procedures.

This user guide assumes you are already familiar with basic Windows and Macintosh concepts—menus, dialogs, and mouse operations, such as clicking and dragging. If you need more information on these subjects, or on the Macintosh Finder or the Windows Desktop, please refer to the Macintosh User’s Manual or the Microsoft Windows User’s Guide, respectively.

Conventions

This user guide is for both Windows and Macintosh users. By convention, Macintosh commands precede Windows commands in the text. For example, Command/Ctrl+I is equivalent to the Macintosh Command-I and the Windows Ctrl+I. For simplicity, the term folder refers to directories as well as folders. The Kai’s SuperGOO interface for both platforms is identical, unless otherwise specified.

Technical Support

MetaCreations offers technical support to registered users of Kai's SuperGOO with valid serial numbers. This support encompasses issues that involve installation, configuration and/or functionality. There are three convenient options: The Web, e-mail and telephone support.

Web Support

Many of the answers to your questions are available 24 hours a day on our website:

www.metacreations.com/support

Try exploring the FAQ section. In addition to frequently asked questions, our website provides troubleshooting techniques, late breaking product news, and other resources to get the most out of Painter.

E-Mail Support

To answer your technical support question most effectively and quickly, please use the e-mail form provided for you on our website:

www.metacreations.com/support.

If you do not have access to the Internet, e-mail directly to support@metacreations and a form will be e-mailed back to you.

Telephone Support

Phone support hours are Monday-Friday, 8:00 AM-5:00 PM Pacific Time, excluding holidays. You must have your serial number when calling for support and please be at your computer if possible.

As a registered user of Kai's SuperGOO, you are entitled to one free call. The number is: (408)430-4068. After your first call, technical support for Kai's SuperGOO comes under the category of Product Support.

Subsequent calls will entail a charge of \$1.45 per minute, with a maximum of \$25.00 per call. The rate-per-minute will be stated at the beginning of each call.

Please Note: The charge will not begin until a technical support specialist takes your call.

Per-minute charges are subject to change without prior notice.

The Fee-For-Service number is:

(888) 456-META (6382)

Creative Support

If you have questions regarding creative technique, please refer to the forums and mail-lists on our website:

www.metacreations.com

This area is available to you to meet and talk with other users of Kai's SuperGOO to share knowledge, technique, and inspiration.

Note: MetaCreations reserves the right to change its support policies at any time.

Getting to Know Kai's SuperGOO

What is SuperGOO?

Kai's SuperGOO is the latest addition to the MetaCreations line of creative entertainment tools. Like its predecessor, Kai's Power GOO, SuperGOO is a fun image-distortion tool. Using SuperGOO's tools and effects, you can stretch, stir, bulge, or twirl pictures to create "funhouse mirror" distortion effects. Using the libraries that come with SuperGOO you can create your own realistic faces.

Once distorted, an image can be printed or saved for use in photo-editing or compositing software or in a desktop publishing application. Multiple distortion effects can be combined to create animated movies (in QuickTime or AVI format) for use in multimedia presentations or output directly to video.

What can I do with Kai's SuperGOO?

The most obvious use for SuperGOO is to take images of family, friends and co-workers and use the SuperGOO distortion tools to create funny parodies of people for your own amusement. You can then save those images as parts of movies or as a still images. Images can be imported into image-editing applications for additional modifications or inclusion in advertising or fine art pieces.

Animations can be used in multimedia authoring applications for inclusion in both on-screen and video-based presentations. Both images and animations can be incorporated into Web pages.

Exploring the Kai's SuperGOO Workspace

Unlike most applications that use a myriad of palettes and toolbars to display their features, SuperGOO is divided into rooms.

There are two rooms in SuperGOO:

- The FUSION Room
- The GOO Room

These rooms contain all the features and functions you'll need to fully express your creativity.

The FUSION Room

The FUSION Room works like a police sketch artist's tool. It lets you combine different facial components to create your own unique faces. Using the huge number of noses, eyes, mouths, heads and hair stored in the Kai's SuperGOO library, you can create almost any face. You can also incorporate features from your own photographs.

Use the FUSION Room to mix and match facial features to create your own faces.

Once you've created a face, you can take it into the GOO Room and distort it just like you would any other image.

The GOO Room

The GOO Room is where you distort images to create your own custom pictures. The images you use in this room can be imported from a variety of sources, or opened from the GOO library.

Use the GOO Room to distort imported images.

Once open, you can use the GOO tools to distort, bulge, smear or twirl portions of the image, or use the GOO effects to twirl, rotate, stretch or squeeze the entire image.

You can also save your picture at various stages and then play the images together as a movie, or GOOvie.

The Option Buttons

The three buttons that appear at the top of each room let you move between rooms and access import and export functions.

The Option buttons.

The Basics of Working with Kai's SuperGOO

Kai's SuperGOO is an incredibly easy-to-use program. Most of Kai's SuperGOO's features are applied by a simple click and drag. **The best way to get the most out of Kai's SuperGOO is to just click a tool and try it.**

Before you start exploring, there are a few basic procedures you should know. These procedures apply to the entire application.

Working with Rooms

You can move between rooms using the Option buttons at the top of the room. When you move from the FUSION Room to the GOO room, the picture on the Image Canvas moves with you. This way you can GOO a face you created in the FUSION Room.

To move between rooms:

- ✱ In the GOO Room click the FUSION button at the top of the screen to move to the FUSION Room.

In the FUSION Room, click the GOO button to move to the GOO Room.

Working with Files

Kai's SuperGOO lets you import your own pictures of friends and family to distort or combine to create wacky pictures. You can open a file in BMP, PICT, Photoshop, TIFF, JPEG, GIF, or FlashPix.

To open a picture:

1. Click the In button at the top of the screen and choose Open from the popup menu. The Open dialog appears.
2. Locate the picture file you want to use and click Open. The picture appears on the Image Canvas.

Importing Files using Plug-ins

Kai's SuperGOO can import images in a number of standard image formats. You can extend Kai's SuperGOO's import capabilities using third-party plug-ins. A *plug-in* is a component that connects with an application and extends its capabilities.

In order to use a plug-in from an outside developer you have to place it in a folder that SuperGOO can access.

To install plug-ins:

- ⌘ In Finder or the Windows desktop, drag the plug-in application's icon in to the **SuperGOO: plugins** folder.

To import a picture using plug-ins:

1. Click the In button at the top of the screen and choose **Import Via Plug-Ins > Set Destination for Acquires and Imports** from the menu. The Set Destination dialog appears.
2. Select a folder on your system where you want imported images stored.
3. Click the In button again and choose **Import Via Plug-Ins > Select Plug-ins Folder** from the menu. The Select Folder dialog appears.
4. Locate the folder where you've stored your import plug-ins.

Scanning Pictures

You can scan images directly into Kai's SuperGOO using a program interface called TWAIN. This interface lets Kai's SuperGOO interact directly with your scanner.

To scan a picture into Kai's SuperGOO:

1. Click the In button and choose **Import via TWAIN > Set Destination for Acquires and Imports** from the menu.
2. Select a folder where you want to store scanned images.
3. Click the In button again and choose **Import via TWAIN > Select TWAIN Source**. The Select Source dialog appears.
4. Select your scanner from the list and click OK.
5. Click the In button again and choose **Import via TWAIN > TWAIN Acquire**. The TWAIN dialog appears.
6. Use the dialog controls to setup and start a scan of your picture.

Saving Pictures

You can save GOOed pictures in a number of popular image formats including, BMP, PICT, Photoshop, TIFF, JPEG, GIF or FlashPix. Once saved, a picture can be used in another image-editing application or page-layout application.

To save a picture:

1. Click the Out button and choose Save. The Save dialog appears.
2. Choose a file format, location and filename and click Save.

Printing Pictures

Once you're done GOOing a picture or finished creating a new face, you can print your work.

To print a picture:

1. Click the Out button and choose Print. The Print dialog appears.
2. Set up your print options and click Print.

Just GOO It!: A Tutorial

Welcome

Welcome to the Kai's SuperGOO Tutorial. This tutorial is designed to teach you how to use the major features and functions in Kai's SuperGOO. Once you're done you'll know how to use most of the tools to create your own image and then GOO them.

Each section of this tutorial is self-contained. So, if you only want to learn about GOOing, skip to the GOO lesson, or if you only want to learn about fusing images, jump to the Fusion lessons.

Don't worry; the tutorial doesn't take long, and who knows, you might even have some fun along the way.

Getting Started

Kai's SuperGOO is made up of two rooms: The FUSION Room and the GOO Room. The FUSION Room lets you create faces by combining different features. The GOO Room lets you distort images using brushes and effects.

Before you start playing with Kai's SuperGOO, there are a few things you should know how to do.

Lesson 1: Moving Between Rooms

The Map Tablet and In/Out Tablet both provide ways of switching between the two rooms. The Map Tablet provides a picture that identifies all parts of the application. You can click this picture to move to different parts of Kai's SuperGOO.

To move between rooms:

1. Launch Kai's SuperGOO.
2. Click the FUSION button at the top of the screen. The FUSION Room appears.

The FUSION Room showing a face in the Image Canvas.

Making Faces

In this section you'll learn how to use the features of the FUSION Room to create a face. The FUSION Room works like a police sketch artist's tool. This room lets you take different facial features like eyes, noses, and mouths and mix them up to create different faces. You can mix and match any number of features. Kai's SuperGOO provides a huge number of features to choose from.

In this section you'll create a face by combining features from the FUSION library.

Lesson 1: Making a Random Face

SuperGOO's Mutator lets you sit back and watch as Kai's SuperGOO quickly generates a random face by combining facial features from the FUSION Libraries.

There are a series of buttons, called Feature controls, on the Mutator that represents the different facial features you can apply to a face. When a button is highlighted, the features it represents are randomly generated. When a button is not highlighted, the feature is not included in the randomization.

In this lesson you'll learn how to generate a random face and control how that face is generated using the Feature controls.

To randomly generate a male face:

1. Move your cursor over the Mutator button to "wake up" the Mutator.

The Mutator button.

2. In the Mutator, drag the selector towards the male symbol as shown.

The Gender Selector in the Mutator.

3. Click the Randomize button.

The Randomize button.

A new male face appears on the Image Canvas.

A randomly generated male face.

To control how a face is generated:

1. Click the Eyes Feature control to disable it.

The Head Feature control on the Mutator.

2. Click the Randomize button.

All the features on the face, except the eyes are replaced randomly.

Lesson 2: Adding Features

All the features on a face in the FUSION Room can be replaced by a feature stored in the GOO library. The library for a particular feature is accessed by moving your cursor over a tool in the Face palette.

The Face palette contains the six tools that control each of the features on the face: Head, Mouth, Eyes, Nose, Hair and Facial Hair.

To replace a feature using the Face tools:

1. Drag your cursor over the Mouth tool. Four little controls, called Library controls, appear around the tool.

The Mouth tool with its Library controls displayed.

2. Click the upper-left library control to display the ♂ symbol. This tells SuperGOO that you want to add a female mouth.

The Gender library control

A ♂ symbol indicates that you want to add a male mouth.

3. Click the upper-right library control. A series of mouth previews appear around the face.

The randomly generated head surrounded by mouth previews.

4. Click a mouth you like. The mouth is applied to the face.

The randomly generated head with a female mouth.

5. Click the face in the center to hide the library previews.

Lesson 3: Editing Features

Once you've added features to your face, you can re-arrange them to refine your face, or to create an unrealistic funny face.

The tools in the Edit palette let you reposition, resize, rotate, and flip facial features.

To reposition a feature:

1. Click the Reposition tool in the Edit palette.

The Reposition tool.

2. Drag the nose on the face up and slightly to the left. Notice that the nose moves, but the rest of the face stays the same.

The generated face with a repositioned nose.

To resize a feature:

1. Click the Resize tool.

The Resize tool.

2. Move the cursor over the center of the nose and then drag towards the top-right corner of the screen. The nose enlarges.

Release the mouse button when the nose is about the size shown.

The generated face with an enlarged nose.

To rotate a feature:

1. Click the Rotate tool.

The Rotate tool.

2. Move the cursor over the mouth and drag to the right. The mouth rotates clockwise.

The generated face with a rotated mouth.

Lesson 4: Cloning Features

Using the Clone tool you can combine the features from an existing image with the face you created in the FUSION Room. This way you can combine your friends' faces with the one you're creating.

Features are combined using a process called *cloning*. When you clone something, a portion of a source image is duplicated onto a destination image.

Once the features are cloned onto your face, you can reposition or edit them using the Edit tools.

In this lesson, the source image is a file called MYFACE and the destination is the face in the Image Canvas.

To clone a features from an image:

1. Click the Clone tool.

The Clone tool.

2. Locate the file **Documentation: Tutorial: MYFACE** and click Open.

The MYFACE appears in a clone window. This image will act as the source for your cloning.

The MYFACE image in a clone window.

3. In the Image Canvas, move the cursor over the eyes. Notice that an Origin Selector icon appears on the source image.

The Origin Selector icon on the source image.

This icon lets you know which part of the source image will be cloned onto the Image Canvas.

4. Make sure that the Origin Selector is positioned over the eyes of the MYFACE image.

5. In the Image Canvas, drag your mouse over the eyes in small circles. As you drag, the eyes from the MYFACE image appear on your face.

The generated face with cloned eyes.

To reposition cloned features:

1. Click the Reposition tool.

The Reposition tool.

2. Drag the cloned eyes up slightly so that they cover the original eyes.

The cloned eyes covering the original eyes.

GOO It

In the GOO Room your pictures are treated like they're made out of liquid. The tools in this room let you move that liquid around to create goofy distortions or comical caricatures out of normal images.

In the GOO Room you can use the tools in the GOO brush palette to distort your picture using brushstrokes, kind of like painting with water, or the tools in the Effects palette to apply distortion effects.

To move to the GOO Room:

- ✱ Click the GOO button at the top of the screen.

Lesson 1: GOOing Using Brushes

The GOO brushes let you smear, smudge, twist and generally distort your image. Each of the brushes lets you distort the image differently.

In this lesson you'll use the GOO brushes to turn the face you created in the FUSION Room into a caricature.

To smear an area of your image:

1. Click the top set of rainbow colored buttons. The GOO Brushes palette appears.

The GOO brushes palette buttons.

These tools let you GOO specific portions of the image.

2. Click the Smear tool.

The Smear Tool.

3. Drag the Size control slider down to reduce the size of the brush.

The Size control slider.

4. Move the cursor to the right corner of the mouth and pull down, then to the side and up.
5. Repeat the move on the right side of the face.

The face after its been smeared.

To smudge an area of your image:

1. Select the Smudge tool.

The Smudge tool

2. Click the up arrow to increase the size of the brush.
3. Drag the Flow control up to increase the flow of the Smudge tool. Higher flows make the image act like it's more liquid. Colors streak easier and the picture distorts quickly. Keep the flow low if you don't want to distort your picture too much.
4. Click the Mirror Vertical button. When this button is enabled, any changes you make to one side of the face are mirrored onto the other side.

The Mirror Vertical button.

5. Place your cursor on the left side of the boy's nose, press down and pull your mouse to the left slowly.

The face after its been smudged.

To move an area of your image:

1. Select the Smear tool.

The Smear tool.

2. Place your cursor on the right side of his forehead and push up and to the right.

The face after its been smeared.

To nudge an area of your image:

1. Select the Nudge tool.

The Nudge tool.

2. Place your cursor at the center of the right eye and gently push up.

The eyes after they've been nudged.

To GOOplicate an area of your image:

1. Select the GOOplicate tool.

The GOOplicate tool.

2. Place your cursor over the newly GOOed right eye and begin GOOing

3. The eye unGOOes, but in its new location.

The eyes after they've been GOOplicated.

Lesson 2: GOOing Using Effects

GOO effects let you GOO the entire image all at once. Different effects produce completely different results. The Effects palette lets you apply nine different effects to your picture.

In this lesson you'll use the Effects palette to apply several effects to your face.

To apply the Twirl effect to an image:

1. Click the bottom set of buttons on the left side of the screen to display the Effects palette.

The Effects palette buttons.

2. Click the Twirl button.

The Twirl button.

3. Click and drag from the center of your image out. The Twirl effect is applied to the image.

The Twirl effect applied to the face.

To apply the Spike effect to an image:

1. Select the Spike button.
2. Click and drag from the center of your image out. The Spike effect is applied to the image.

The final look of the spike effect.

Making GOOvies

A GOOvie is a collection of *keyframes* played together as an animation. As the movie, or GOOvie plays, your image moves from one transformation to another. The Keyframe Controller lets you save images as keyframes and delete or display specific frames.

In this section you'll learn how to create keyframes and preview your animation.

To save an image as a keyframe:

1. Move the cursor to the first empty frame.
2. Click the center of the frame. The face in the Image Canvas appears in the frame.

The face in the first frame.

3. Click the ZigZag button on the Effects palette.

The ZigZag effect applied to the face.

4. Click on the next empty frame in the filmstrip to save the Vortex effect as a keyframe.
5. Click the Stretch button to apply the stretch effect.

The Stretch effect applied to the face.

6. Click the center of the third frame to save the Stretch effect as a keyframe.

The face in the third frame.

To play a GOOvie:

- ⌘ Click the Movie Camera icon on the right side of the Image Canvas. Your stored images are played in the Image Canvas. Click the mouse button to stop the playback.

To control the playback speed:

- ⌘ Drag the Playback slider down, towards the turtle, to slow down the playback of your movie.
You can also drag the slider up, towards the rabbit, to speed up playback.

Moving On

Well, that's about it. Once you've completed the tutorial you're ready to explore the rest of SuperGOO. In fact, that's probably the best way of learning how SuperGOO works—explore. Just click on things and see what they do. If you like the effect, click on it again. If you don't, click on something else.

The GOO Room

How the GOO Room Works

The GOO Room is where you'll distort images and create GOOVies. The room provides a series of tools that let you play with the images as if they were made out of liquid. There are also tools that let you save your distorted image at different stages. You can then create an animation, or GOOvie, out of your distortions.

The GOO Room

Image Canvas

The Image Canvas, found in both the GOO and FUSION Rooms, is where your selected image appears. All modifications to your image are displayed here in real-time.

GOO Brush Palette

The first set of rainbow buttons in the upper left corner of the screen shows or hides the GOO Brush Palette, which contains nine different distortion brushes.

GOO Effects Palette

The second set of rainbow buttons shows or hides the GOO Effects Palette, which contains nine different distortion effects.

Control Slider

When the GOO Palette is active, the control shifts the picture between the current GOO composite and the original image.

Keyframe Palette

When you move your mouse cursor to the bottom of the interface, a set of keyframe place-holders appears. These place-holders are used to store animation keyframes for movie, or GOOvie, creation.

A keyframe is a snapshot of your image at different stages. When you string a number of keyframes together, SuperGOO fills in the gaps between keyframes to create a smooth animation.

Keyframe Controller

An editing device for the Keyframe Palette, the Keyframe Controller, floats over the top of the palette, allowing you to easily move and select your keyframes. Select a keyframe then click on the lower arrow to delete it, or the upper arrows to load the keyframe to (up arrow) or from (down arrow) the Image Canvas.

Playback Slider

Press and drag up or down to set the speed of your animation. Drag up to increase animation speed or down to decrease it.

Movie Camera

Click on the Movie Camera to preview your GOOvie. Click anywhere to stop playback.

Text Engine

The ABC text label accesses the Text dialog which lets you add text to a layer that floats over your picture. Refer to **“Adding Text” on page 38** for more on adding text.

Working in the GOO Room

The GOO Room works like a painting easel. All the brushes and tools you'll need to play with an image are arranged around a preview of your picture in the center of the screen. GOOing an image is just a matter of dragging a brush over the image and seeing what happens. Different brushes produce very different results, so try experimenting with a number of them.

Opening or Importing Images

Before you start GOOing you'll need an image. You can either open an existing image, or import one. You can import images using either a third-party plug-in or a scanner.

To open a file:

1. Click the In button and choose Open from the dialog.
2. Locate the picture file you want to use and click Open. The picture appears in the center of the screen.

You can import a file using either a third-party plug-in or by scanning it directly into SuperGOO. Refer to **“Importing Files using Plug-ins” on page 13** and **“Scanning Pictures” on page 14** for more on both importing methods.

Viewing an Image

While you’re GOOing your picture, you’ll often find it useful to move to different areas of the image or enlarge the portion you’re working on. The Zoom and Pan controls let you change your view of the image.

Zooming enlarges or shrinks the image. When you use the Zoom tools you’re not changing the image, just the way you see it. Panning lets you move a different portion of the image onto the Image Canvas. Again, the Pan tool doesn’t effect the image, only how you see it.

To zoom in/out of the image:

- ⌘ Click the Zoom In button to enlarge the image. Click the Zoom Out button to shrink it.

The Zoom In and Out buttons.

To pan the image:

- ⌘ Drag the cursor over the Pan button. The image moves in the direction you drag.

The Pan button.

Setting Up Brushes

All the GOOing features in the GOO room are applied using brushes. You can set a number of parameters for each brush.

To set the size of a brush:

- ⌘ Drag over the Size control to set the brush size. Drag up to increase the brush size and down to decrease it.

The Size control.

You can also size the brush using the up and down arrow keys on your keyboard. Use the up arrow key to increase the brush size and the down arrow key to reduce brush size.

To set the flow of a brush:

- ⌘ Drag up over the Flow control to increase the flow of the brush, and down to decrease. The higher the flow the more liquid the image appears (i.e. colors streak more and distort easily).

The Flow control.

Mirroring a Brush Effect

Using the mirror control you can mirror a brush effect either vertically or horizontally. When the Vertical Mirror button is enabled, brushstrokes are mirrored along a vertical axis. When the Horizontal

Mirror button is active, brushstrokes are mirrored along a horizontal axis. If both buttons are enabled, brushstrokes are mirrored both horizontally and vertically.

An effect mirrored horizontally, vertically and along both axes.

Using the GOO Brush Palette

The GOO Brush Palette consists of nine different distortion brushes: Reset, Grow/Shrink, Move, Smear, Smudge, Nudge, Mirror Toggle, Smooth, and UnGOO.

To activate the GOO Brush palette:

- ✎ Click the top set of rainbow-colored brush icons. The GOO Brush palette appears on top of the Image Canvas.

The GOO Brush palette icons.

To use a GOO brush:

- ✎ Click on one of the brush buttons to activate it and then drag over the image.
You can also switch between brushes by pressing the right or left arrow keys on your keyboard.

To undo a GOO brush:

- ✎ Press Command/Ctrl + Z.

Smear

Painting with Smear creates high levels of distortion pressure for creating quick, dramatic distortions.

Smudge

Smudge affects a slightly smaller area than Smear, but with decreased pressure. Use it to create small, subtle distortion effects.

Nudge

The extremely small size and high pressure of Nudge makes it useful for creating a finger-painting effect.

Twirl

Twirl applies a small twirling distortion to an area of your image.

Bulge/Pinch

Creates a bulging distortion on an area of the image. Decrease the flow of the brush and it creates a pinching effect.

Noise

Noise applies graphic noise to an area of your image.

GOOplicate

GOOplicate reproduces the original image in a different area of your image.

UnGOO

UnGOO quickly undo the distortion effects of the GOO brushes. It is the ultimate “selective undo” brush.

Smear

Smudge

Nudge

Twirl

Bulge

Noise

GooPLICATE

UnGOO

Using the GOO Effects Palette

The GOO Effects palette consists of nine different global distortion effects including: Bulge, Twirl, Rotate, Stretch, Squeeze, Spike, Noise, and UnWind.

To activate the GOO Effects palette:

- ※ Click the bottom set of rainbow-colored brush icons. The GOO Effects palette appears on top of the Image Canvas.

The GOO Effects palette icons.

To use a GOO Effect:

- ※ Click on one of the brush buttons to apply the effect to the entire image.

Click and drag within your image to apply the effect.

Squeeze

Squeeze pinches your image inward or outward.

Wave

Wave produces wave-like distortions over your image.

Twirl

Twirl causes your image to twirl clockwise or counter-clockwise

ZigZag

ZigZag causes your image to distort in concentric waves.

Ripple

Ripple causes your image to distort in waves that resemble a ripple of water.

Spike

Spike adds a radiant effect to your image which resembles rays extending outward.

Tiling

Tiling lets you zoom out of your image. As you move further away, SuperGOO tiles the image to fill the Image Canvas. If you drag to the left or right over the image, it rotates.

Stretch

Stretch pulls your image vertically and horizontally.

Vortex

Vortex pulls the edges of your image towards the center as if the picture was being sucked into a black hole

ZigZag

Ripple

Twirl

Tiling

Squeeze

Spike

Vortex

Wave

Adding Text

In SuperGOO you can add a layer of text over top of your image. The Text dialog lets you enter your text string, select a font type, style alignment and color.

The Text dialog.

Since the text is on its own layer, it's not affected by the GOO brushes or effects. You can position text anywhere on the image.

To add text:

1. Click the ABC icon on the right side of the screen. The Text dialog appears.
2. Click the font popup and choose a font from the menu.
3. Enter your text into the window.
4. Click one of the alignment buttons to create left, right or center aligned text.

5. Click one of the style buttons to change the text style. B= Bold, I= Italic, S= Drop Shadow.
6. Click the color button and choose a text color.
7. Click the A, B or C icons to resize.
8. Click the Ok icon to close the dialog. Your text appears on the Image Canvas.
9. Drag the text to a position on the image and click to place it.

Making GOOVies

Making movies of your GOO distortions is so easy that you'll undoubtedly spend a great deal of time creating many GOO animations (GOOVies). This section contains all of the information you'll need to create interesting and amusing movies.

Working with Keyframes

An animation is created by saving different images to the Keyframe palette. When you play the GOOVie, SuperGOO moves between the images stored in the Keyframe palette. The Keyframe palette displays all the images in your GOOVie and lets you add or remove frames from the animation.

The Keyframe palette.

To save the current image into an empty keyframe:

1. Move the Keyframe controller over an empty keyframe.
2. Click on the empty keyframe.

To replace a keyframe image with the current image:

1. Click on the down arrow in the bottom-center of the Keyframe Controller.
2. Click the empty keyframe.

To create duplicate keyframes:

1. Move the Keyframe controller over the keyframe you want to duplicate.
2. Click the down arrow in the top-left corner of the Keyframe controller.

Using the Control Slider

To create smooth animations, software programs have traditionally created and stored hundreds of intermediate image frames using a process called “tweening” (which refers to the “in between” frames from one keyframe to the next). SuperGOO, on the other hand, creates these intermediate images in real-time.

The Control Slider can be used to view the intermediate animation frames between your original image and the last selected keyframe. One of these intermediate images can then be loaded into an empty keyframe to create a more gradual transition than could be created by manually trying to soften distortions.

The Control Slider.

Dragging the Control Slider up moves through the intermediate images toward the current image, dragging down moves back toward your original image.

Playing Your Movies

Once you have saved images into at least two keyframes, you can play your GOOvie using the Movie Camera. The movie will automatically loop from the last keyframe to the first for an unending animation.

The Movie Camera.

To play a GOOvie:

- ⌘ Click the Movie Camera.

To stop a GOOvie:

- ⌘ Click the mouse button.

Controlling Playback

The Playback Slider (located below the Movie Camera) is used to set the speed at which you want your animation to play. Drag the Playback Slider up towards the rabbit to increase the speed of your animation, or down towards the turtle to decrease the speed.

The Playback Slider.

Saving Animations

Your GOOvie animations can be saved as QuickTime and Sequenced PICT (Macintosh) or AVI and Sequenced BMP (Windows) files. Once you've saved your animation, it can be used in other multi-media applications.

To save an animation:

1. Make sure you have at least two keyframes in the Keyframe palette.
2. Click the In button at the top of the screen and choose Make Movie from the popup menu. The Make Movie dialog appears.

3. Choose a Format popup menu and choose a file format for your movie.
4. Click the Settings popup to display compression options for your movie.
5. Set the desired Compression options. The options available depend on the Compressor you select. Refer to your Macintosh or Windows system documentation for more on these compressors.
6. Click OK to exit the options dialog.
7. Click the arrow icon next to the File Location text label. The Save dialog appears.
8. Choose a location for your movie and click Save.
9. Drag the Size slider to set the dimensions of your animation.
10. Click the checkmark icon to create a movie file.

4

The FUSION Room

How the Fusion Room Works

The Fusion Room lets you create faces by combining different facial features. You can choose from a host of features stored in the GOO libraries, or you can import your own pictures and use them to create a new face. The tools in the FUSION Room let you add different types of facial features and access the GOO libraries.

Each of the features on the face is placed on a separate layer, meaning that you can reposition or scale a feature without affecting the rest of the face. These layers let you move features around and experiment with different combinations.

The FUSION Room.

Image Canvas

The Image Canvas is where you combine and rearrange facial features. As you change the face, the canvas automatically updates to display your edits.

Face Palette

The Face Palette contains controls for adding the different features that make up the face. Each tool controls a different facial feature.

Library Controls

Each Face tool has four controls that let you view the different facial features available in the library.

Edit Palette

This palette contains tools for editing the position and scale of a selected feature.

Mutator

The Mutator lets you randomly combine different facial features. You can control which features are randomized, and whether those features are male or female.

Memory Frames

These frames let you store the faces you create in the Image Canvas.

Working in the FUSION Room

The FUSION Room works like a police sketch artist's tool. You combine different facial features, like eyes, noses and hair, to create a new face. You can use the facial features stored in the GOO libraries or inter-change features from your own pictures.

Opening and Importing Pictures

In the FUSION Room you can either create a face from scratch by combining features, or you can apply new features to an existing face.

To open a file:

1. Click the tablet handle on the left side of the screen. The In/Out tablet appears.
2. Click the Open text label. The Open dialog appears.
3. Locate the picture file you want to use and click Open. The picture appears in the center of the screen.

You can import a file using either a third-party plug-in or by scanning it directly into SuperGOO. Refer to **“Importing Files using Plug-ins” on page 13** or **“Scanning Pictures” on page 14** for more on both importing methods.

Layered images, like those produced by many image-editing applications, are flattened unless you open a.FOO file (the FUSION Room's native format).

Using the Face Palette

Each of the tools in the Face palette let you change a specific feature on the face. Using the tools you can change the Head, Mouth, Nose, Eyes, Hair and Accessories.

Face palette tools.

Changing Features

When you activate a tool, four small controls appear around it. These controls let you search through the GOO libraries to find the right facial feature. You can use the controls to move through the library one feature at a time or display a number of features all at once.

A Face palette tool with the Library controls displayed.

To change a facial feature:

1. Click the Face tool for the feature you want to change. For example, if you want to change the nose, click the Nose tool.
Four Library controls appear around the activated tool.
2. Click the upper-left library control to change the gender of the facial feature.

There are different libraries for male and female features:

- ♂ means that you're using male features.
- ♀ means that you're using female features.

3. Click the control in the lower-right to move forward through the library, or the control in the lower-left to move backwards.

Every time you click the control a new feature appears on the face.

To change a facial feature using the library previews:

1. Click the Face tool for the feature you want to change. For example, if you want to change the nose, click the Nose tool.
Four Library controls appear around the activated tool.
2. Click the upper-right library control. A series of preview for the selected feature appear around the image in the Image Canvas.

A series of library previews displayed over the Image Canvas.

3. Click the preview of the feature you want to use. The feature is applied to the face.

You can click the ♂ or ♀ button on the Face tool to switch between male and female features.

4. Click the face in the center of the Image Canvas to hide the library previews.

Hiding/Showing Features

You can also use the tools to disable specific features. When the tool appears dimmed, that feature is not displayed on the face.

To hide/show a facial feature:

- ✱ Click the tool for the features you want to hide. For example, click the Eyes tool if you want to hide the eyes.
Click the tool again to make the feature reappear.

Using the Edit Palette

The Edit palette provides tools for rearranging and resizing the facial features in the Image Canvas. The palette consists of six tools that let you import, reposition, resize, rotate, flip vertically and flip horizontally.

Each feature is on its own layer, so you can edit one feature without affecting the rest of the face.

You can click the Reset button at any time to undo your changes.

The Edit palette.

To edit a feature:

1. Click on the desired editing tool in the Edit palette.
2. Drag over the facial feature you want to edit.

To reposition a facial feature:

1. Click the Reposition tool in the Edit palette.
2. Drag a facial feature in the Image Canvas. The feature moves in the direction you drag.

To resize a facial feature:

1. Click the Resize tool.
2. Drag over the feature you want to resize. Drag away from the center of the feature to increase its size, or drag towards its center to decrease its size.

To rotate a facial feature:

1. Click the Rotate tool.
2. Drag over the feature you want to rotate. Drag right to rotate clockwise, or left to rotate counter clockwise.

To stretch a feature vertically:

1. Click the Stretch Vertical tool.
2. Click the feature you want to flip.

To stretch a feature horizontally:

1. Click the Stretch Horizontal tool.
2. Click the feature you want to flip.

Randomizing Features

The Mutator, located in the bottom-right corner of the screen, lets you randomize the features of the face in the Image Canvas. When you use the Mutator, features are taken from the GOO libraries and randomly combined on the face.

The Mutator.

You can control the mutation, or randomization, process by choosing either male or female features. When you choose either male or female, the random features are constrained to the selected gender. For example, if you select male, only random male features are applied to the face.

You can also constrain the randomization process. Using the Feature controls you can choose exactly which features are randomized. When you disable a feature, it is not randomized. You can use these controls to refine your mutations. For example, when you find a head you like, disable the head control, and continue randomizing. Then when you find a mouth, disable the mouth control as well. You can continue disabling controls until you're happy with the entire face.

To randomize the features on a face:

1. Drag the Gender Selector to choose either male or female features.
2. Disable the Feature control for any features you don't want randomized.
3. Click the Randomize button. A new set of features appear in the Image Canvas.

Combining Features

Not only can the FUSION Room create faces from a library of existing features, it can also fuse the features from existing pictures to create a totally new face. This way you can take pictures of your family and friends and combine them to create fantastic new faces.

Features are combined using a process called *cloning*. When you clone something, a portion of a source image is duplicated on to a destination image. The Clone tool in the Edit palette lets you pick an area of the source image to duplicate onto the face in the Image Canvas.

Cloned portions of an image appear on their own layer that floats over the rest of the image. This means that you can move the cloned features anywhere on the image Canvas, without affecting the rest of the face.

The Clone Window with a portion of the source image being cloned onto the Image Canvas.

Clone Source

To clone a features from an image:

1. Click the Clone tool. The Open dialog appears.
2. Locate the file you want to use and click Open. The image appears in the Clone Source window.
3. In the Image Canvas, position the cursor over the area where you want to place a cloned portion of the image.
4. Drag the mouse over the area in small circles. As you drag, a portion of the source image appears on your face.
5. Use the Edit palette tools to reposition, or resize the cloned features.

To load an image into the Clone window:

1. Click the Load button on the Clone window. The In dialog appears.
2. Locate the file you want to use as a clone source and click Open.
The image appears in a clone window.
3. On the Image Canvas move the cursor over the area where you want the cloned features to appear.
4. Drag the over the desired area. The features from clone image appear on your FUSION Room face.

Saving Faces

The memory frames, located below the Image canvas, let you save different faces. As you create faces you may want to save different stages of change. For example, if you're playing with the mouth and get it into just the right position, you can temporarily store it in a memory frame and then continue editing features.

To store a face in a Memory Frame:

1. Set up the face in the Image Canvas.
2. Click on an empty memory Frame.

To recall a stored face:

- ⌘ Click on the face you want to use.

To clear a Memory Frame:

- ⌘ Option/Alt-click the Memory Frame you want to clear.

To retrieve a face from Memory Frame:

- ⌘ Click the Memory Frame you want to use.

- **When you're using a full body shot, you'll need to use the Resize tool to make facial components bigger. Don't be surprised if you lose image quality when you resize the features. That's just the price you pay for image editing.**

Using your Own Photos in the Fusion Room

Since you can copy any feature from an imported photo into the FUSION Room, you'll probably want to add features from people you know. Almost any photo with a face in it can be useful in the FUSION Room. Here are some tips for using photos:

- **Images that have straight-on face shots make it easier to find features to clone.**
- **Photos with little or no background make cloning just the facial components easier.**

MetaCreations Limited Use License Agreement

By using this software you are agreeing and indicating your acceptance of these terms and conditions. If you do not agree with them you should return the software to the dealer from whom you purchased and your money will be refunded. If the dealer from whom you purchased this package fails to refund your money, contact MetaCreations Corp. immediately at the address below.

MetaCreations Corp. (hereinafter referred to as Company), a Delaware-based Corporation, provides the computer software (hereinafter referred to as Program) contained on the medium in this package and licenses its use. You assume full responsibility for the selection of the Program to achieve your intended results and for the installation, use and results obtained from the Program.

License

A. In consideration of the payment of a license fee, you are granted a personal, non-transferable and non-exclusive license to use the Program under the terms stated in the Agreement. You own the dis-

kette or other physical media on which the Program is provided under the terms of this Agreement, but all title and ownership of the Program and enclosed related documentation (hereinafter referred to as Documentation), and all other rights not expressly granted to you under this Agreement, remain with the Company.

B. The Program may be used by you only on a single computer. Therefore, you must treat this software just like a book. With the exception of Item D below, "just like a book" means that this software may be used by any number of people and may be freely moved from one computer location to another, so long as there is no possibility of it being used at one location while the same copy is at the same time being used at another location. Just as the same copy of a book cannot be read by two different people in two different places at the same time, neither can the same copy of software be used by two different people in two different places at the same time. Site licenses for multiple single users are available. Contact MetaCreations Corp. for details.

C. You and your employees and agents are required to protect the confidentiality of the Program. You may not distribute or otherwise make the Program or Documentation available to any third party.

D. You may not copy or reproduce the Program or Documentation for any purpose except to make one (1) archival copy of the Program, in machine readable or printed form, for backup purposes only in support of your use of the Program on a single computer. You must reproduce and include the Company copyright notice on the backup copy of the Program.

E. Any portion of the Program merged into or used in conjunction with another program will continue to be the property of the Company and subject to the terms and condition of this Agreement. You must reproduce and include Company's copyright notice on any portion merged in or used in conjunction with another program.

F. You may not sublease, assign or otherwise transfer the Program or this license to any other person without the prior written consent of Company.

G. You acknowledge that you are receiving on a LIMITED LICENSE TO USE the Program and Documentation and that the Company retains title to the Program and Documentation. You acknowledge that Company has a valuable proprietary interest in the Program and Documentation. You may not use, copy, modify or transfer the Program or Documentation or any copy, modification or merged portion in whole or in part except as expressly provided for in this Agreement. If you transfer possession of any copy modification or merged portion of the Program or Documentation to another party, your license is automatically terminated.

H. If you have purchased a NETWORK version of the software, this license agreement applies to the installation of the software onto a single file server.

It may not be copied onto multiple systems. Each node connected to the file server must also have its own node copy of the software that becomes a license for that specific user.

Term

This license granted to you is effective until terminated. You may terminate it at any time by returning the Program and Documentation to Company together with all copies, modifications and merged portions in any form. The license will also terminate upon conditions set forth elsewhere in the Agreement, or if you fail to comply with any term or condition of this Agreement. You agree upon such termination to return the Program and Documentation to Company together with all copies, modifications and merged portion in any form. Upon termination, Company can also enforce any rights provided by law. The provision of this Agreement which protects the proprietary rights of Company will continue in force after termination. Termination of this license either voluntary or involuntary does not entitle you to a refund of your purchase cost except as provided elsewhere in this License Agreement.

Limited Warranty

Company warrants, as the sole warranty, that the medium on which the Program is furnished will be free from defects in materials and workmanship under normal use and conditions for a period of ninety (90) days from the date of delivery to you as evidenced by a copy of your receipt. No distributor, dealer or any other entity or person is authorized to expand or alter either this warranty or this Agreement. Any such representations will not bind the Company. Company does not warrant that the functions contained in the Program will meet your requirements or that the operation of the Program will be uninterrupted or error-free. Except as stated above in this section, the Program and Documentation are provided as-is without warranty of any kind either expressed or implied, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. You assume entire risk as it applies to the quality and performance of the Program and Documentation. Should the Program prove defective you (and not Company, authorized Company Distributor or dealer) assume the entire cost of all necessary servicing repair or correction.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state. Some states do not allow the exclusion of implied warranties, so the above exclusion may not apply to you.

Limitation of Remedies

Company's entire liability and remedy will be:

A. The replacement of any medium not meeting Company's 'Limited Warranty' explained above and which is returned to Company or an authorized Company distributor or dealer with a copy of your receipt; or

B. If Company is unable to deliver a replacement medium which conforms to the warranty provided under this Agreement, you may terminate this Agreement by returning the Program and Documentation to Company, authorized Company Distributor, or dealer from whom you obtained the Program and your license fee will be refunded.

Product Returns

If you must ship the Program and Documentation to an authorized Company Distributor, dealer or to Company, you must prepay shipping and either insure the Program and Documentation or assume all

risk of loss or damage in transit. To replace a defective medium during the ninety (90) day warranty period, if you are returning the medium to Company, please send us your name and address, the defective medium and a copy of your receipt at the address provided below. In no event will Company be liable to you for any damages direct, indirect, incidental or consequential, including damages for any lost profits, lost savings or other incidental or consequential damages arising out of the use or inability to use such Program and Documentation, even if Company has been advised of the possibility of such damages or for any claim by any other party. Some states do not allow the limitation or exclusion of liability for incidental or consequential damages so the above limitation or exclusion may not apply to you. In no event will Company liability for damages to you or any other person ever exceed the amount of the license fee paid by you to use the Program regardless of the form of the claim.

US Government Restricted Rights

The Program and Documentation are provided with restricted rights. Use, duplication or disclosure by the US Government is subject to restrictions as set forth in subdivi-

sion (b) (3) (ii) of the Rights in Technical Data and Computer Software Clause at (252) 227-7013. Contractor/Manufacturer is MetaCreations Corp., 6303 Carpinteria Avenue, Carpinteria, CA 93013.

General

This Agreement is governed by the laws of the state of California (except federal law governs copyrights and register trademark(s)). If any provision of this Agreement is deemed invalid by any court having jurisdiction, that particular provision will be deemed deleted and will not affect the validity of any other provision of this Agreement. Should you have any questions concerning this Agreement, you may contact MetaCreations Corp. at the address below.
