

Riven Movie Snoop is a small app that knows how to find QuickTime movies in the data files for the game Riven and lets you watch them without playing the game.

System requirements: any Power Mac capable of playing the game itself.

Riven Movie Snoop is freeware; distribute anywhere!
Send any bug reports, comments, flames, or job offers to:
d88-bli@nada.kth.se

How to use: Open the application. Open any file in the folder named "Data" on any of the five Riven CDs. Click on a movie in the list on the right side of the window to open it. Use the standard movie controller to play the movie. On a 640x480 screen, the scroll bar won't be visible, but you can scroll the list with the home/end/page up/page down keys. You can select the previous/next movie with the up/down arrow keys.

Special goodies:
Movie 148 in the file "g_Data.MHK" on CD 4.
Movie 3 in the file "o_Data.MHK" on CD 5.

Version history:
1.0 Initial release.
1.01 68k code added for optimists. :-)
