# Server Installation and User Instructions

This application may be installed on a central file server, any web server on your LAN, or onto the hard drive of any PC or Macintosh desktop.

---

## MINIMUM REQUIREMENTS

IBM Compatible PC: Windows 95/98/NT/2000/Me/XP 200 Mhz, 32MB RAM, with Microsoft Internet Explorer 4.0 or higher or Netscape Navigator / Communicator 4.08 through 4.79. Netscape 6.x or 7.x are not currently supported.

Power Macintosh: Mac OS 8, 9, 10 with Netscape Communicator 4.7.

---

## INSTALLATION

Place the SMART Yellow Pages CD in your CD drive. The CD should launch automatically and display an options menu. If not, run 'LAUNCH.EXE' on the CD. You may choose to install the directory onto a LAN Server, a Web Server, or onto a hard drive. You may also run the directory directly from the CD by clicking on the 'Run from CD' option on the menu. To view detailed installation instructions, click on the 'Help and Documentation' option on the menu.

Macintosh users can launch the directory directly from the CD by opening 'MACSTART.HTM' in a browser. Users may also copy the entire contents of the CD onto a hard drive and then run 'MACSTART.HTM' in a browser to launch the directory.

---

## BROWSER PLUG-IN

The application utilizes an Adobe SVG plug-in to render images. The installer verifies browser compatibility and installs the Adobe SVG 3.0 plug-in from the server if necessary. If users have restricted rights for application installs, the LAN Administrator may use a Windows NT logon script or Windows Installer Service to deploy the desktop icon and browser plug-in. Instructions are available by clicking on the 'Help and Documentation' option on the launch menu.

## USING YOUR ELECTRONIC DIRECTORY

Click on the SMART Yellow Pages icon on your desktop to launch the directory. Click on any section of the Directory from the list displayed. You may page through any section using the 'Previous' and 'Next' buttons below the page.

**Searching:** Yellow Page searches scan Headings, Businesses Names, Phone Numbers, and Keywords (a keyword can be almost anything: brand, item, company name, location, etc.). White Page searches scan Names and Phone Numbers. Enter your search in the search field and click on "Search Yellow" to search the Yellow Pages or "Search White" to search the White Pages.

**Zooming:** Click with your mouse where you wish to zoom in on the page. Click on the magnifying glass icon with the minus sign on the toolbar to zoom out. Click on the magnifying glass icon with the plus sign to zoom into the center of your view. To reset the page to full page view at any time, click on the full page icon on the toolbar. Click on the page width icon to zoom the page so that it fills the width of the viewing frame.

**Scrolling:** Click on or drag the scrollbars to scroll the page.

**Turn Pages:** Click on the 'Previous' and 'Next' icons below the page to turn pages.

**Double-Page view:** Click on the double-page view icon on the toolbar to view the directory in "open book" format. This is useful to view dual-page ads, to be able to scan two pages at a time, or to get the look of the directory as if it were on a table in front of you.

Note: This functionality is not available for Mac users.
