Stalker Internet Mail Server 1.7

Introduction
The Stalker Internet Mail Server (SIMS) is a server application implementing Internet mail exchange service using the SMTP protocol, remote mailbox access using the POP3 protocol, and the "poppwd" service for remote password modification.

The Stalker Internet Mail Server has a built-in Web (HTTP) Server. This server allows the SIMS administrator to configure SIMS over the Internet.

The Stalker Internet Mail Server is **FREE**. It does not have any limitations, and it can be used to support several hundred accounts.

Documentation
The SIMS System Guide is available at:
