Topaz Simplify is a Photoshop plug-in, which means it won't run by itself and requires a compatible host program.

To Install

1. Close Photoshop or other image editing program if you are using it.
2. Open the Topaz Simplify dmg or zip file, double-click on the Topaz Simplify installer, and then follow the on-screen instructions.

Mac Dmg

Windows Zip

3. Your Topaz plug-ins will automatically be installed in your Photoshop plug-ins folder.
4. After the installation, you will need to enter your license or trial key.

Important for Mac Users:

After installation, Topaz Simplify will be installed in the following folder: “ Macintosh HD -> Library -> Application Support -> Topaz Labs -> Simplify 3”.

If your Photoshop is installed in a customized location, you will need to manually create a shortcut (alias) link inside folder “<Photoshop install folder> -> Plug-ins” that links to “ Macintosh HD -> Library -> Application Support -> Topaz Labs -> Simplify 3 -> Plug-ins”.

Entering Your Key

Entering your trial key allows you to save your projects and print them during your evaluation period. Entering your license key allows you do the same, except without any time limitations.

1. Start by opening up an image in Photoshop.
2. Go to Filters -> Topaz Labs -> Simplify 3 -> Menu -> Enter key.
3. You can then copy and paste or type your key in.

Important: To install the product on a second computer, you will need to download Topaz Simplify and then enter your same license key.

Host-Specific Installation

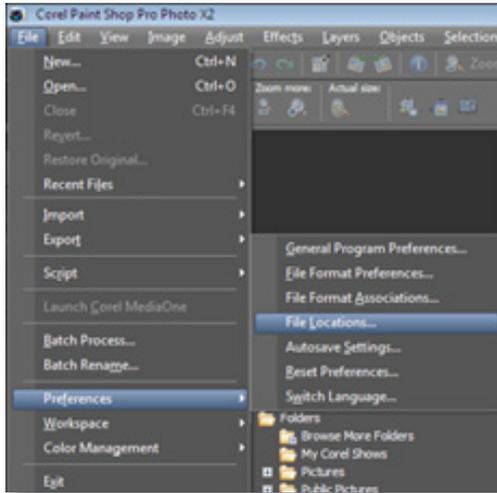

Topaz Simplify is also compatible with Lightroom, Aperture and iPhoto. To use Simplify in any of these programs you will need to download and install the free Topaz Fusion Express compatibility add on. You can get it online at: www.topazlabs.com/downloads

In Windows, Topaz Simplify is supported by most host applications that support Photoshop plug-ins. This includes Paint Shop Pro, Photo Impact, Painter, and Irfanview, although there are additional host programs that may also support Topaz Simplify.

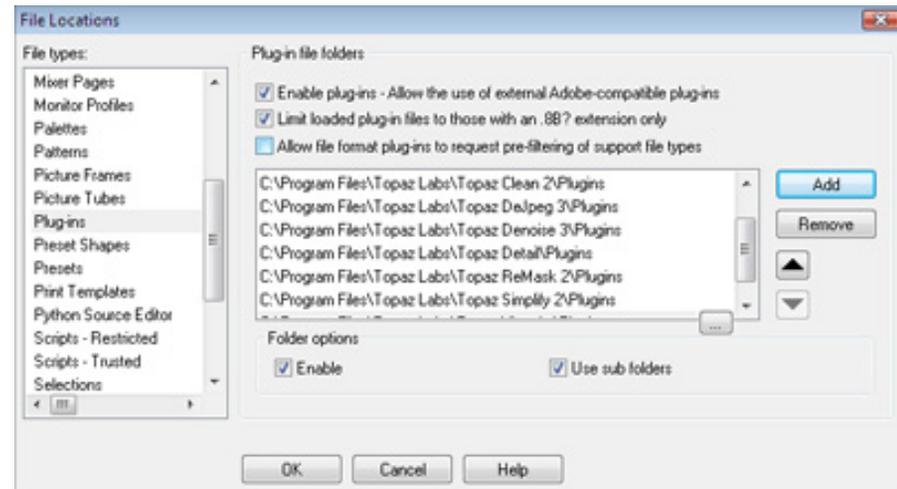

To install Simplify in either Paint Shop Pro, Photo Impact, or Irfanview first download Topaz Simplify to the default location. Then, to configure it into each program following the host-specific instructions on the next page.

How to install Topaz Simplify in Paintshop Pro

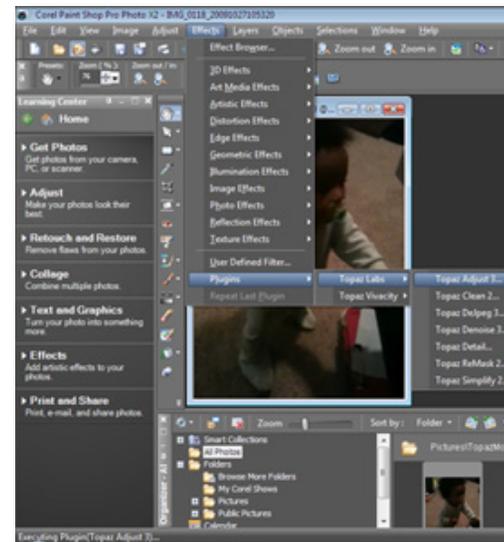

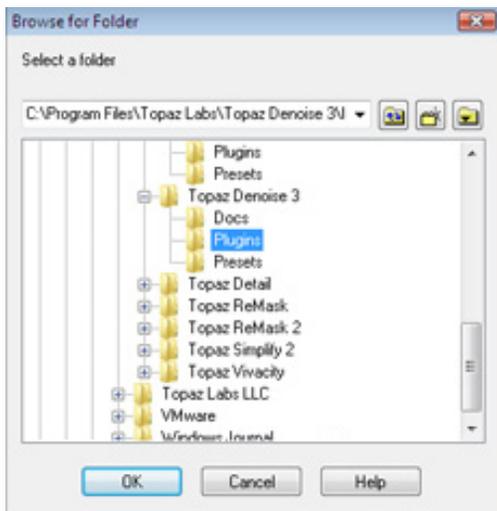

1. First launch Paint Shop Pro.
2. Go to File -> Preferences -> File Locations. Select “Plug-ins” from the “File Types” list and click “Add”.

3. Choose C:\Program Files\Topaz Labs\Topaz Simplify 3 plug-ins and click “OK”.

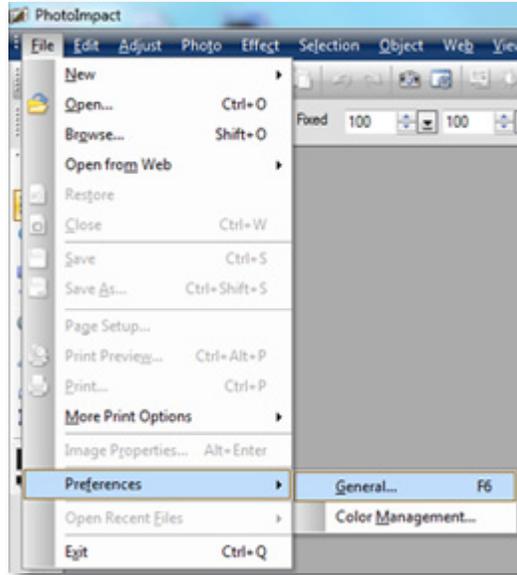

4. Topaz Simplify 3 is now available to use. Simply go to Effects -> Plug-ins and select “Topaz Simplify 3”.

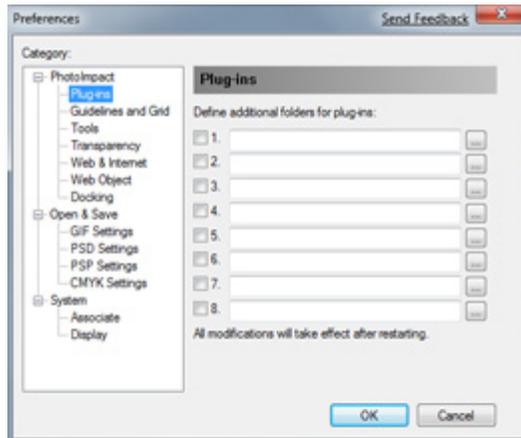

How to install Topaz Simplify in Photo Impact

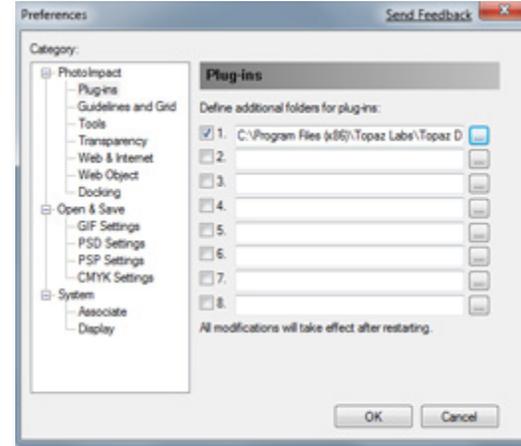

1. First launch Photo Impact.
2. Go to File -> Preferences -> General or use shortcut key F6.

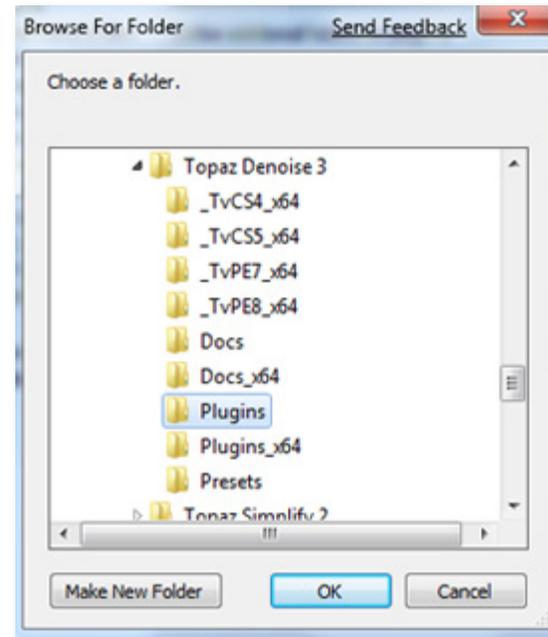

3. Select Plug-ins from the Categories list.

Then click on the **...** button and browse to find the Simplify 3 plug-in folder located in: C:\Program Files\Topaz Labs\Topaz Simplify 3 plug-ins and then click "OK".

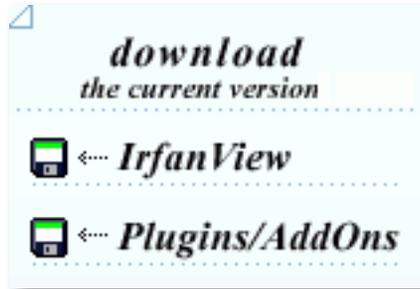

4. Restart Photo Impact. Go to Menu -> Effect to access plug-in.

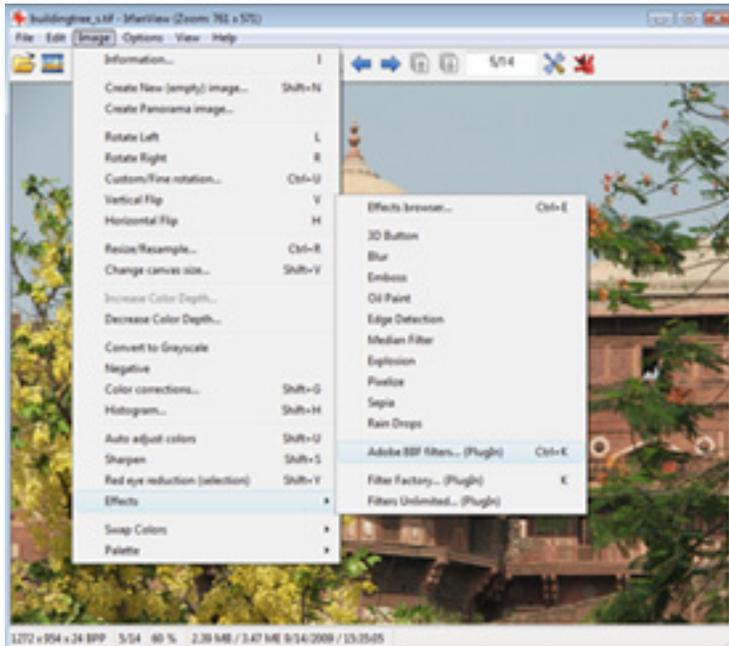

How to install Topaz Simplify in Irfanview

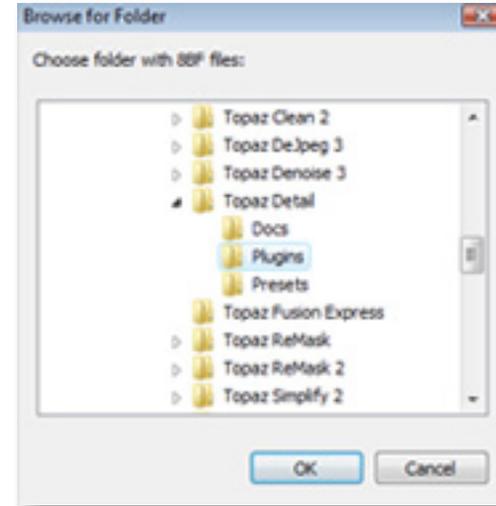

1. Make sure that you have downloaded and installed the 8bf plug-in add-on, available on the Irfanview webpage. (<http://www.software.com/irfanview-plugin>)

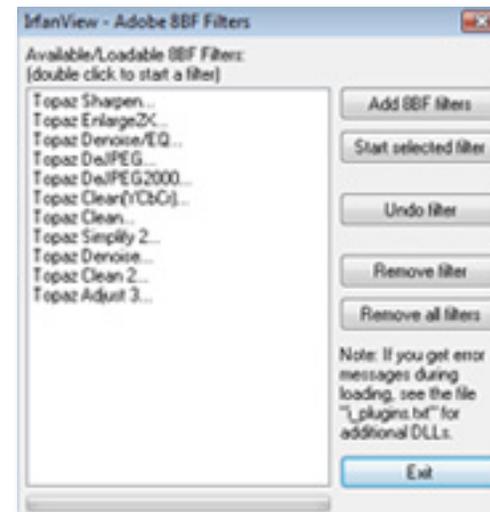

2. Open Irfanview and go to Image -> Effects -> Adobe 8BF filters.

3. In the screen that pops up, select "Add 8BF filters" and navigate to the C:\Program Files\Topaz Labs\Topaz Simplify 3 \Plug-ins folder and click "OK". You will then see "Topaz Simplify 3" in the Available/Loadable 8BF Filters section.

4. To use Topaz Simplify 3 in the future, simply go to Image -> Effects> Adobe 8BF filters again and select "Topaz Simplify 3".

To uninstall Topaz Simplify follow these instructions:

Mac

1. Quit Photoshop (or other editing program).
2. Navigate to the Topaz Labs support files and frames located at: Macintosh HD -> Library -> Application Support -> Topaz Labs.
3. Locate the Topaz Simplify file and move it to the trash. You will need to enter your system password to OK this change.
4. Navigate to your Photoshop plug-ins folder located at: Applications -> Photoshop -> Plug-ins
5. Locate any leftover Topaz Simplify files and move it to the trash.

Windows XP*

1. Quit Photoshop (or other editing program).
2. Click on the Start Menu and select Control Panel.
3. Double-click on Add / Remove programs.
4. Select Topaz Simplify and click remove.

Windows Vista*

1. Quit Photoshop (or other editing program).
2. Click on the Start Menu and select Control Panel.

3. Select Programs, then Uninstall a Program.
4. Select Topaz Simplify and click remove.

Windows 7*

1. Quit Photoshop (or other editing program).
2. Click on the Start Menu and select Control Panel -> Programs -> Programs and Features.
3. Select Topaz Simplify and click uninstall.

*Please note that if you also have the 64-bit version of Simplify installed, then you will need to first uninstall this version before you can uninstall the regular version.

Topaz Simplify

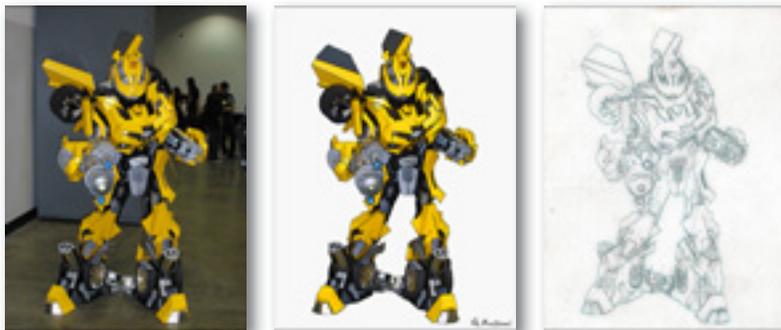

About Topaz Simplify

Topaz Simplify opens up the traditional art medium by bringing digital photographers the tools needed to instantly transform any digital image into a work of art.

Simplify can blur the distinction between photographic realism and art, allowing you to make your digital image into something that is truly unique to look at.

Topaz Simplify allows you to easily apply the look of brush strokes and other art tools with ease. Using Simplify, you can enhance the essence of your original image giving you a dynamic and creative result.

Topaz Simplify is also great for rescuing previously unusable images. By adding artistic enhancements to a damaged, underexposed, overexposed, dull or boring image, you can instantly transform it into something that is creative, unique and eye catching.

Original

Simplify Cartoon

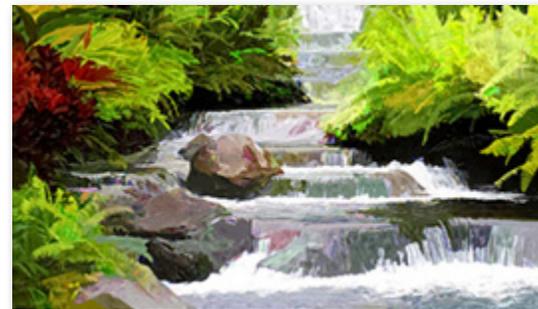

Simplify Sketch

The Primary Functions of Topaz Simplify Include:

1. Remove details from your image based on size.
2. Enhance or remove color in images.
3. Generate or reduce lines, edges and shading for changes in distinctness.
4. Fine tune images to match your artistic vision.
5. Create a new and artistic interpretation of your digital images with ease and artistic precision.
6. Rescue unusable images by adding a traditional art flare.

Before Topaz Simplify

After Topaz Simplify

New Simplify Features

Topaz Simplify 3.0 Features

1. **Auto Updater.** Get software updates instantly.
2. **New user interface.**
3. **Snap / Recall buttons.** Save up to 99 snapshot settings for comparison.
4. **Undo / Redo buttons.**
5. **Collapsible side panels.** Expand and collapse the preset panel and the tool panel for an adjustable workspace.
6. **Collapsible tabs.** Open and close the parameter tabs as you need them.
7. **Preset Enable / Disable option.** Option to enable or disable the preset preview processing at program startup.
8. **Presets Layout.** New preset format with single preset preview window.
9. **Preset Navigation.** Use the up / down arrow keys to navigate the preset list and display the selected preset thumbnail (in preset preview window). Use the return (Enter) key to apply the currently selected preset.
10. **Enable / Disable Tool Tips.** Option to enable or disable the pop up tool tips.
11. **Quick Slider Reset.** Double click on the slider name to reset default slider values.

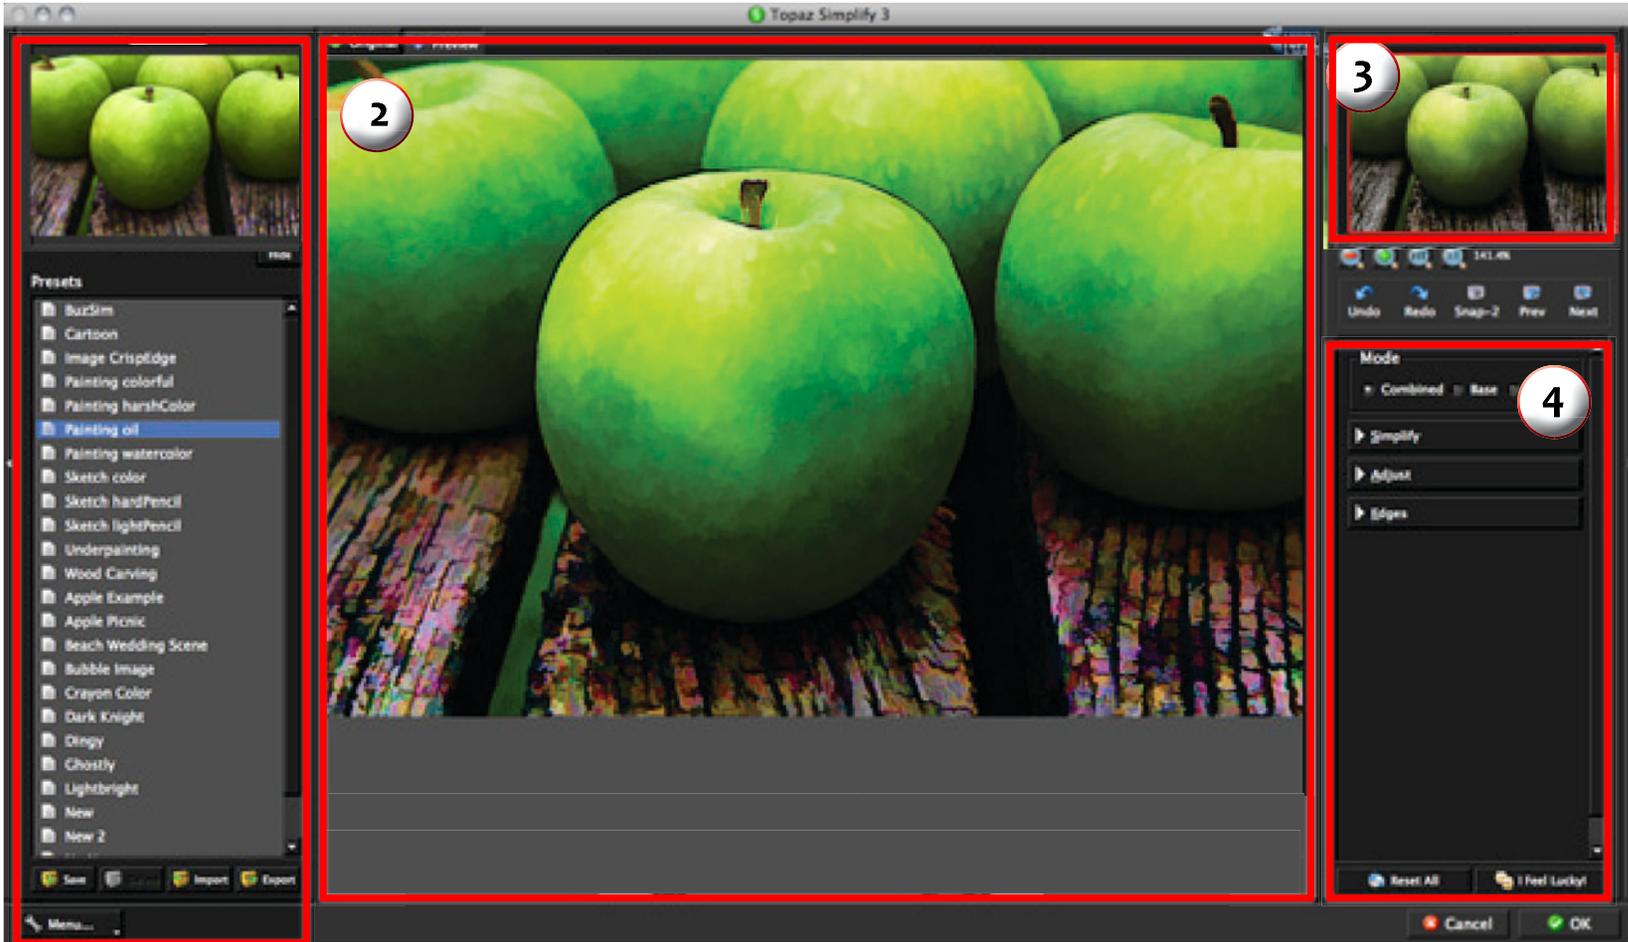

Before Topaz Simplify

After Topaz Simplify

Interface (Main View)

Although the Topaz Simplify interface may look intimidating at first glance, don't worry: it's actually quite simple and easy to use. You'll soon be a pro after experimenting with it for a bit. In order to make sense of the function of each of the various controls, we have divided the interface into a few sections:

1. Presets Preview
The removable pre-view window displays preset previews.

2. Presets Panel
Provides “snapshots” of pre-defined effects.

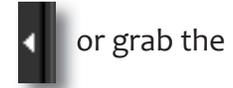

3. Preview Window
Displays the preview of the original and adjusted image.

4. Preview Navigator
Displays the region of the preview image you are currently focused on.

5. Settings & Parameters
Controls the editing using sliders to adjust the various effects.

Interface (Tool Panel View)

Use the small white arrows to expand and collapse the preset panel. You can click the white arrow or grab the edge of the panel and drag it in or out.

Interface (No Panel View)

Use the small white arrows to expand and collapse the preset and tool panels. You can click the white arrows or grab the edge of the panels and drag them in or out.

Interface (Preset Panel View)

Use the small white arrows to expand and collapse the tool panel. You can click the white arrow or grab the edge of the panel and drag it in or out.

or grab the

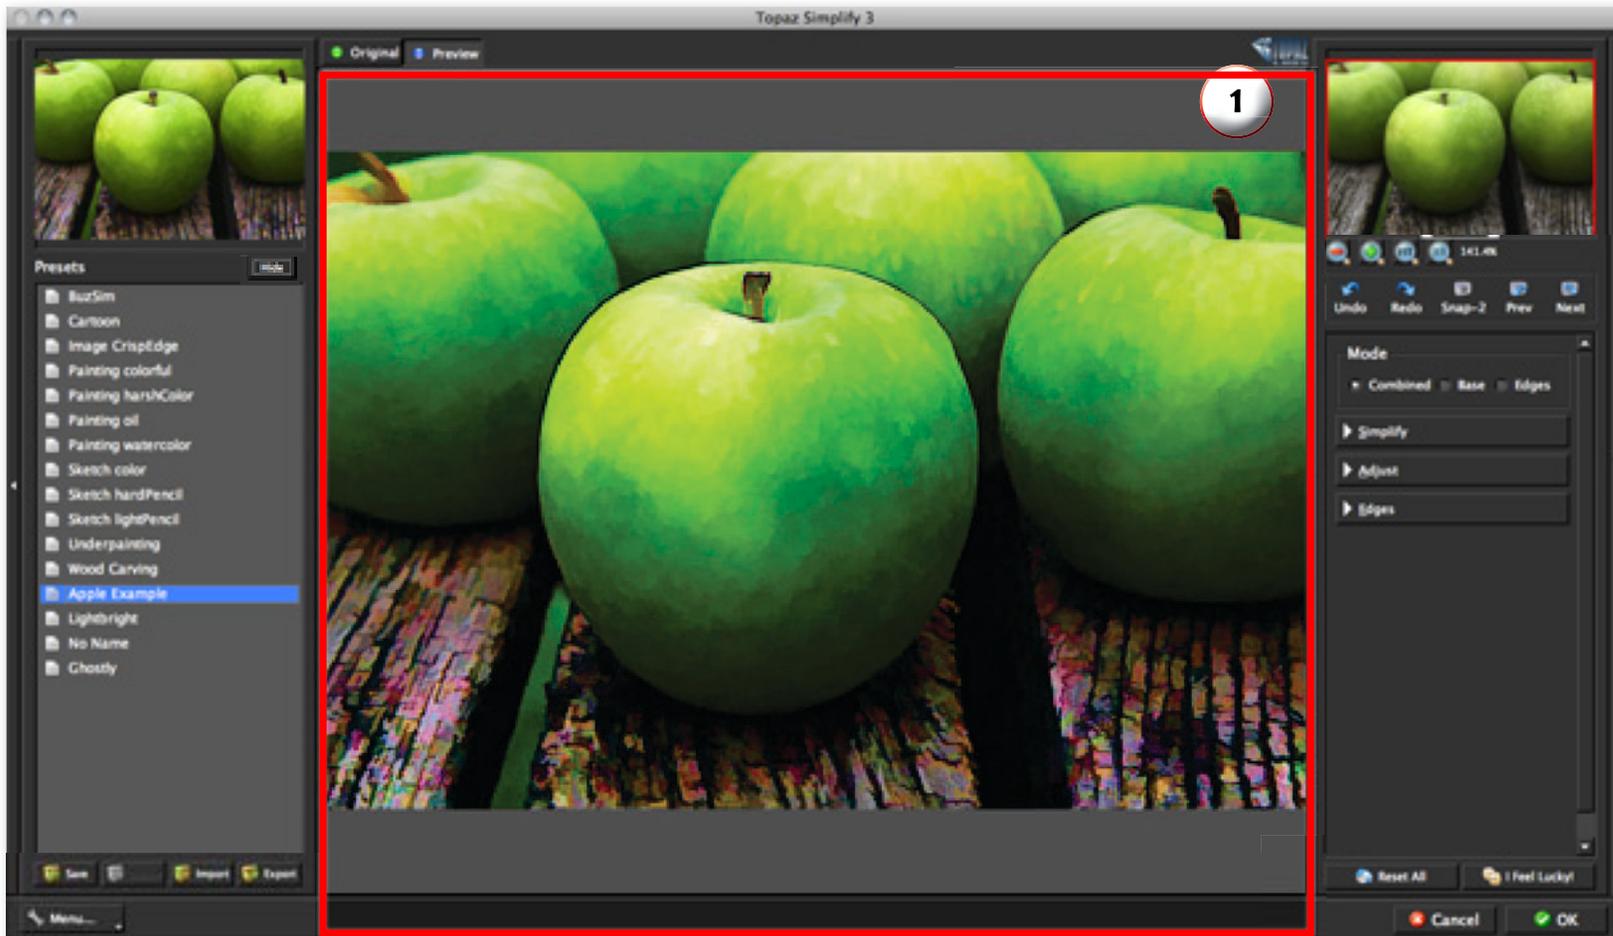

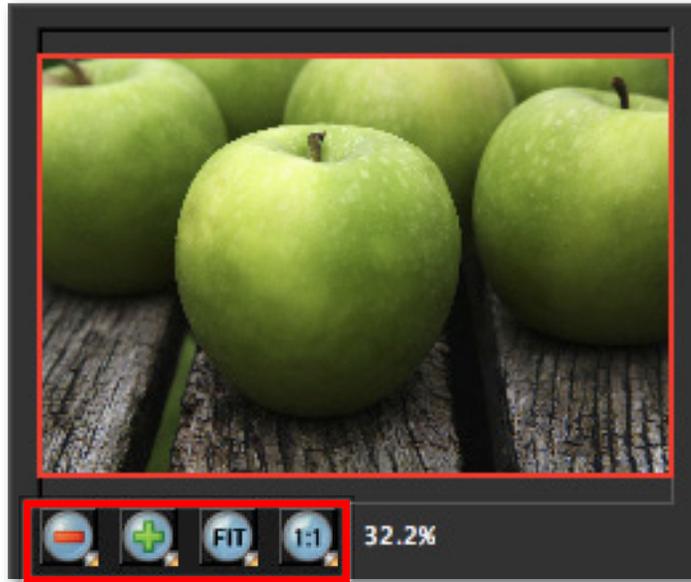

Preview Section

The Preview section is the main window that is centered in the Simplify interface. The preview section shows you the original image and the processed preview of the image. Click on the image in the preview window (or use the Original and Preview buttons) to switch between the Original and Preview tabs and compare the filtered and un-filtered images.

To pan the preview image, click and hold the left mouse button on the preview image and drag it around. When you let go of the mouse button, the new portion of the image will be processed and the result will be displayed.

You can also use SPACE bar or your numbered shortcut keys “1” and “2” to switch back and forth between your filtered and unfiltered image in the preview window.

You can zoom in or out of the preview image by clicking the “+”, or “-” buttons below the preview image. You can also resize the window as well by dragging the bottom right corner in and out.

The “Fit” button will fit the entire image into the preview window.

The “100%” button will zoom to 100% view.

If zoomed below 100% the preview image will be internally resized in order to speed up preview updating.

Visit the Simplify Gallery to see Topaz Simplify at work:
<http://gallery.topazlabs.com/keyword/simplify>

The “Ctrl +” and “Ctrl -” keys zoom in and out of the image, just like in Photoshop.

You can use the arrow keys to adjust the value of the slider that is currently selected.

A complete list of the shortcut keys can be found in the Shortcut Keys section later in this manual.

Photoshop and other host software support many Image Modes, such as Grayscale, RGB, LAB, CMYK, etc. Images can also be 8, 16, or 32 bits per channel. Topaz Simplify supports both 8 bits per channel and 16 bits per channel. Topaz Simplify supports RGB mode only. To work on black-and-white images, first convert them to RGB mode.

Presets

Presets are a great way to speed up and simplify the whole process of using Topaz Simplify. Presets are set previews with previously defined settings that you can recall and reapply at any time.

We've included some default presets for you and, although they won't work for every single photograph, they serve as excellent starting points for customized tweaking.

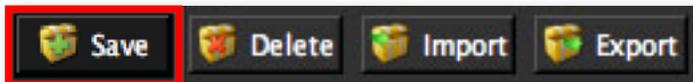

Applying Presets

Applying a default preset is easy and intuitive. Simply clicking on a preset will change all the settings in Topaz Simplify to match those in the selected preset.

To get the exact results you want, you may still want to go through the tabs and tweak the parameters.

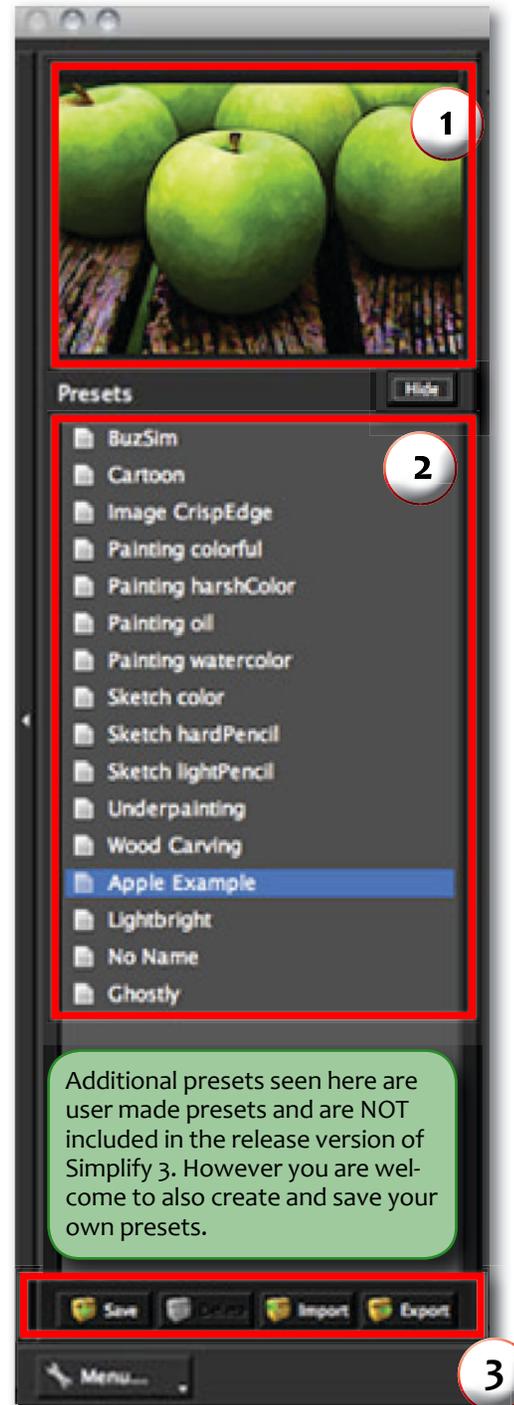

Adding Presets

Sometimes it's convenient to be able to define presets and save your settings for later use. To do this, first adjust the Topaz Simplify parameters until you're satisfied with the result. Then, click on "Save".

Remember that you can easily expand or collapse the presets panel by clicking on the small white arrow on the edge of the panel or by grabbing the panel edge and dragging it in or out.

Work Area

1. Presets Preview

The removable preview window displays preset previews. Click Hide / Show to expand or collapse the preset preview window at anytime during your workflow.

2. Presets List

Lists all of the saved presets available for use.

3. Preset Options

The preset options allow you to save your presets, delete presets (default presents cannot be deleted), import new presets and export your saved presets to share with your friends.

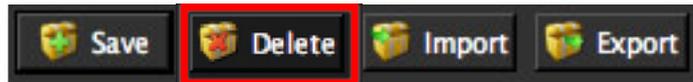

Then enter a preset name, select the type of image that it is good for and then enter a description and click “OK”. You can also select a second image category type that the preset is good for.

Note that if the preset name you’ve entered is the same as any currently saved preset, then you will be asked if you want to overwrite the current one.

Your preset will be automatically saved as a new file with a “.tpp” extension in the Topaz Simplify Presets menu and the preview is automatically generated. To apply it later, just click it like any other preset.

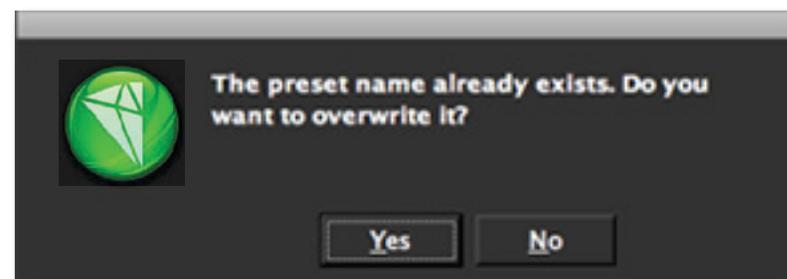

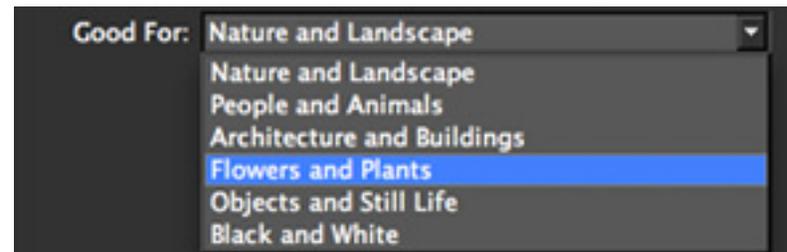

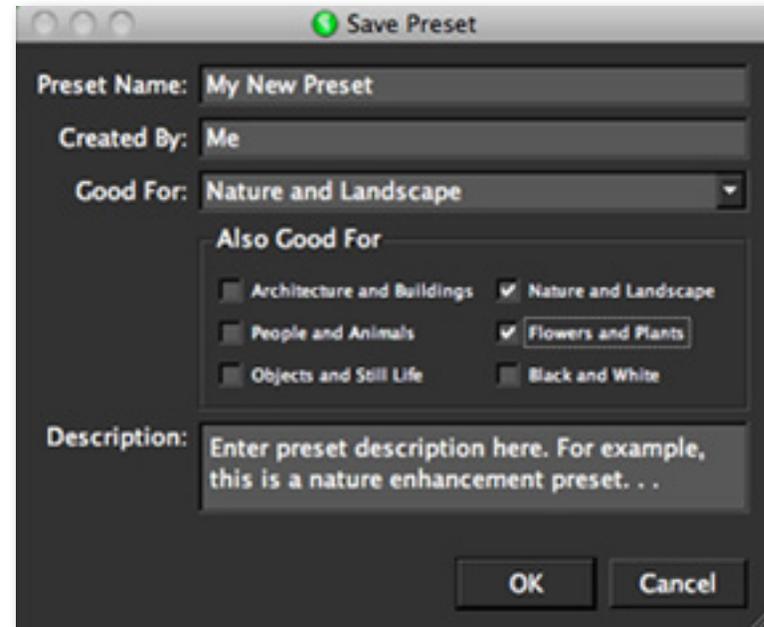

Deleting Presets

If you’d like to delete a preset the select the preset name and then click on Delete.

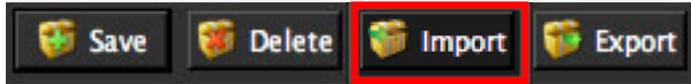

Please Note: Default presents cannot be overridden or deleted. Once you delete a preset it or overwrite it when saving, then it cannot be retrieved.

Saved presets are located in the Topaz Simplify “Presets” folder:
C: \ Program Files \ Topaz Labs \ Topaz Simplify \ Presets unless you’ve opted to install Topaz Simplify into a different directory.
Mac users have this folder at Macintosh HD / Library / ApplicationSupport / TopazLabs / Simplify / Presets.

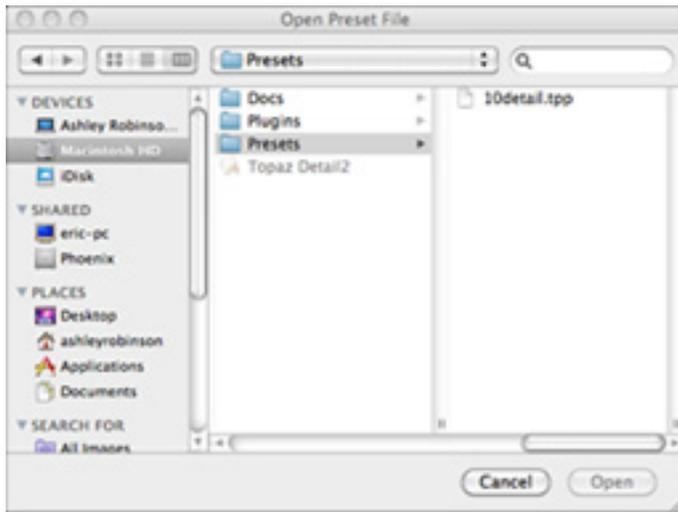

Importing Presets

To import a preset file, click the “Import” button.

This will open up a “Browse” box to import a saved preset from your computer into Topaz Simplify. This is useful if you have downloaded a preset file that you’d like to use.

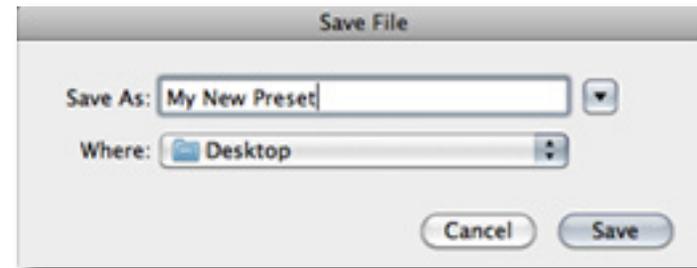

Visit the Topaz Labs Blog which features the latest Photography, software and design information including tutorials, videos, and thoughts about both Topaz and non-Topaz topics.

Exporting Presets

To export the preset file to a certain location, click “Export”.

Name your preset and save it to your desktop or other specified location that you have reserved for saved presets.

You can then share this preset file with others who may then import it.

Sharing Presets

Feel free to share your saved presets by emailing them to your friends and having them put it into their Topaz Simplify Presets folder.

For more information about Simplify be sure to check out the Simplify website at: www.topazlabs.com/simplify

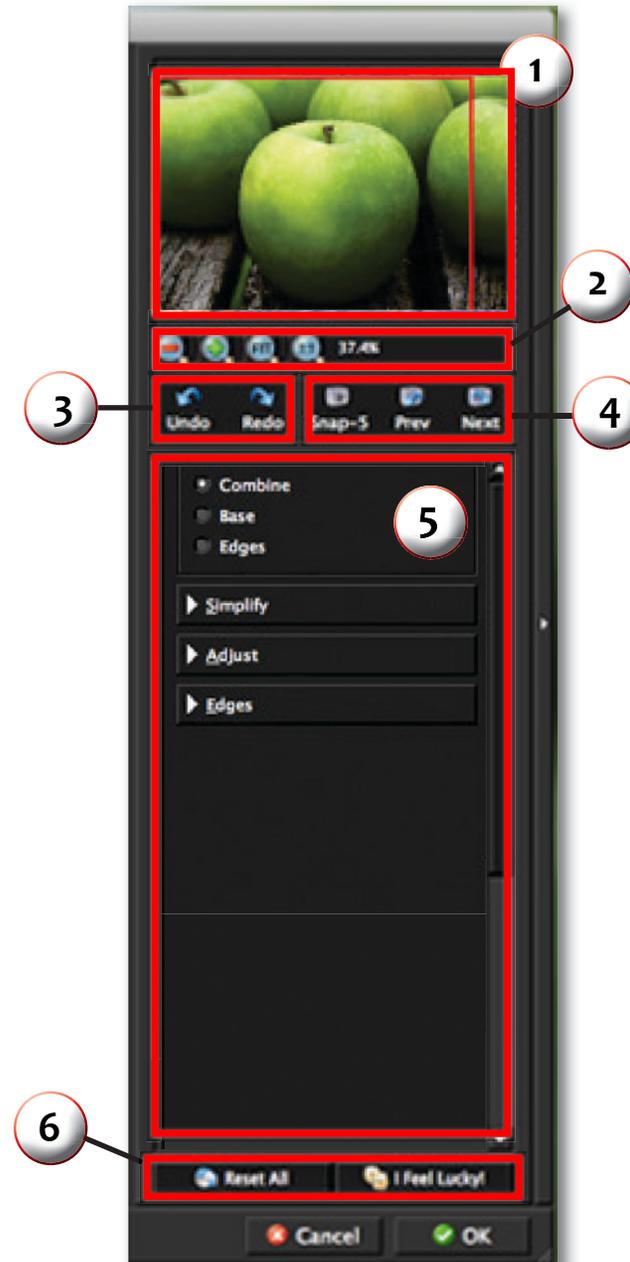

Tools

You will use the various tools in the tools panel during your workflow to make your image adjustments.

1. Preview Navigator - Displays the region of the preview image you are currently focused on.
2. Zoom Buttons - Use the zoom buttons to zoom in and out of your image. Or you can also set your image to fit the preview window or to view it at 100%.
3. Undo and Redo buttons
4. Snap and Recall buttons. Save up to 99 snapshot settings for comparison.
5. Sliders and Parameters - Controls the editing process using sliders to adjust the various effects.
6. Additional Slider Controls - Use the “Reset All” button to reset all of the sliders values back to zero. Use the “I Feel Lucky!” button to apply randomized settings to your image. This is useful when you want to experiment with different settings.

Select this to open up your Internet browser and go to the Topaz Simplify image gallery to see other user images enhanced with Topaz Simplify.

MyTopaz

Brings you to the Topaz community where you can connect and interact with other Topaz users. Here you can also participate in discussions and contests, and share your favorite Topaz images.

Tutorials

Brings you to the Topaz Simplify tutorials page where you can access a variety of helpful video and text tutorials. You can also submit tutorials that you created here as well.

About

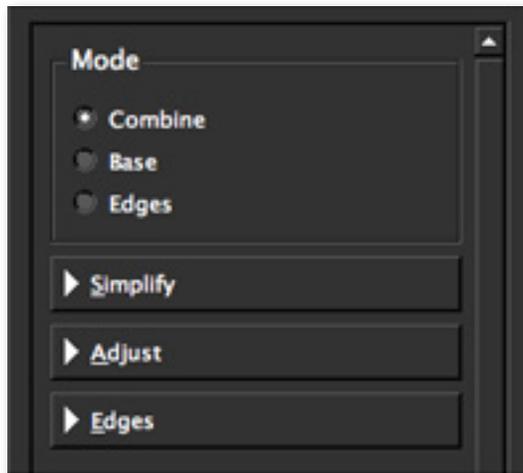

Select this to see what version of Simplify you currently have.

Settings & Parameters

Parameters

Topaz Simplify has three settings tabs and a total of 26 parameters to help you achieve optimal image results.

Before Topaz Simplify

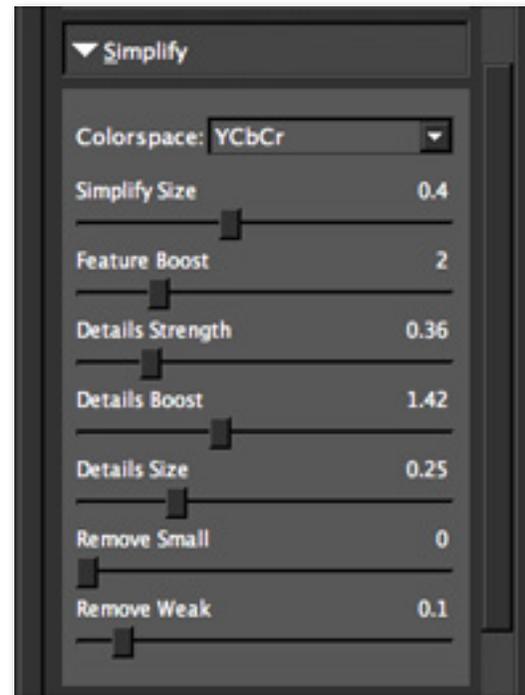

After Topaz Simplify

Colorspace allows you change the space where the simplifying action takes place. The RGB colorspace tends to produce more dramatic color effects, while the YCbCr colorspace tends to shift color less.

Simplify

The Simplify tab controls what details in the image are removed and which ones are retained. Different combinations of the settings create many different possibilities.

Simplify Size

Defines the size of the details being simplified. Any detail with a size below this value will be removed, leaving behind only the larger features. The value of this parameter is relative to the entire image's size.

Feature Boost

Boosts the main features in the image and exaggerates details. Use this in the RGB color space to introduce colorful artifacts into the image. For more natural image colors, switch the colorspace to YCbCr.

Details Strength

Selectively brings back detail from the “simplified” image, and controls the strength of these details. This parameter works with the Details Size slider.

Details Boost

Controls the weaker details in the image. A setting higher than 1 accentuates weaker details, while a setting below 1 weakens minor image details.

Details Size

Determines the size of image features to be considered “detail” which will be brought back with the Detail Strength slider. The value of this parameter is relative to the full image size.

Remove Small

Removes smaller image details whose size is below this value.

Remove Weak

Removes weaker image details with a strength below this value.

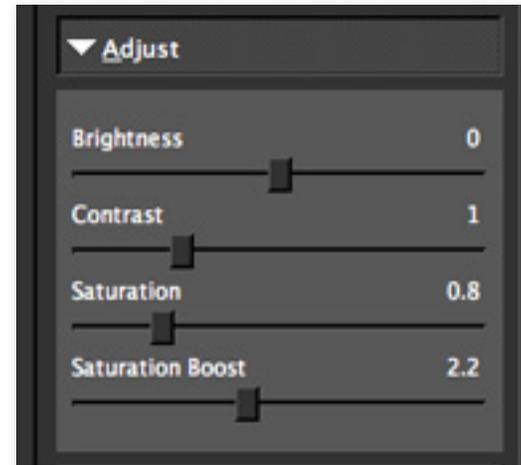

Need to reset your slider values?

Simply double-click on the slider name above the slider control to instantly reset the slider value to 0.

Settings & Parameters

Adjust

The Adjust tab offers convenient color controls which allows you to alter the brightness, contrast and saturation of the simplified image.

**Brightness**

Controls the brightness of the image. A value greater than 1 increases the brightness and a value less than 1 decreases the brightness.

Contrast

Controls the contrast in the image giving you the ability to increase or decrease the appearance of the darks and lights in your image proportionally.

Saturation

Increases or decreases the color saturation (richness of color) in an image.

Saturation Boost

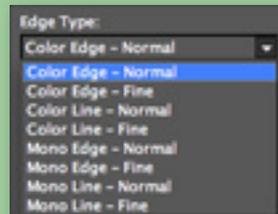

Adjusts the amount of saturation in the weaker image colors without affecting the stronger image colors. Setting this value higher than 1.0 will make the color more vibrant, while a value of less than 1.0 makes the weaker color appear more washed out.

You can use the Saturation Boost slider's ability to adjust the saturation levels of weaker image colors to create a "selective color" effect.

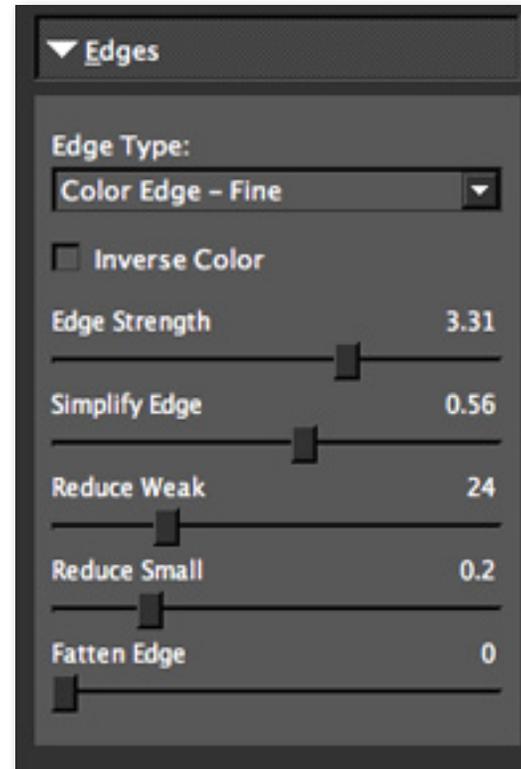

Edges

The Edges tab brings out, modifies or alternatively creates edges in the photo. It also offers the ability to use those lines alone or to combine them with the rest of the image (known as the base). While the Simplify and Adjust tabs make up the main portion of the image, the Edges tab plays an important role in determining the size, shape and color of the edges in an image, which can affect the final result in many ways.

Simplify offers 8 different types of color edges that you can use to accentuate your image. Choose any one of edge types with this option. This includes different combinations of color, size and style of edge lines.

Settings & Parameters

Inverse Edge Color

Enabling this box will invert the edge color. By default, edges are black on a white background. You can use this feature to create white edges on a black background.

Edge Strength

Increases the strength of the displayed edges. This feature only detects edges that have not been excluded by the Simplify Edge parameter.

Simplify Edge

This removes image features of a certain size. The higher this setting is, the less number of edges that will remain. This parameter is analogous to the Simplify Size parameter in the Simplify tab.

Reduce Weak

Reduces edges that are faint or weak in intensity. This feature is ideal when there are stray weak lines around the edges that you would like to remove.

Reduce Small

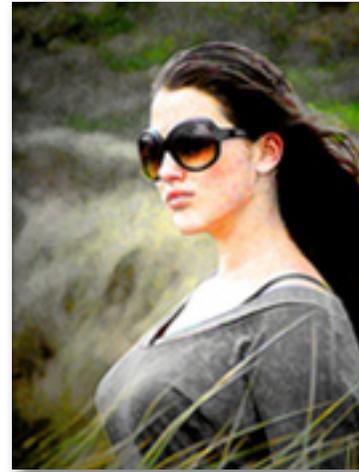

Reduces edges that are small in size. This is also ideally used with there are small lines around important edge detail that you wish to remove.

Fatten Edge

Fattens the image edges, making them thicker. This feature is useful when the original image edges are thin or too small.

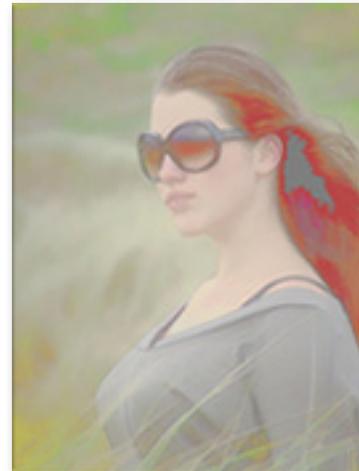

Before Topaz Simplify

After Topaz Simplify

After Topaz Simplify

After Topaz Simplify

After Topaz Simplify

The best way to get great-looking images is to experiment with the filter until you're satisfied. Despite the number of sliders and settings, getting a great result is easier than you might think!

Sample Project #1

In this section, we will walk you through a sample project, step-by-step, to help you become more familiar with the Simplify program focusing on using a combination of presets and manual adjustments.

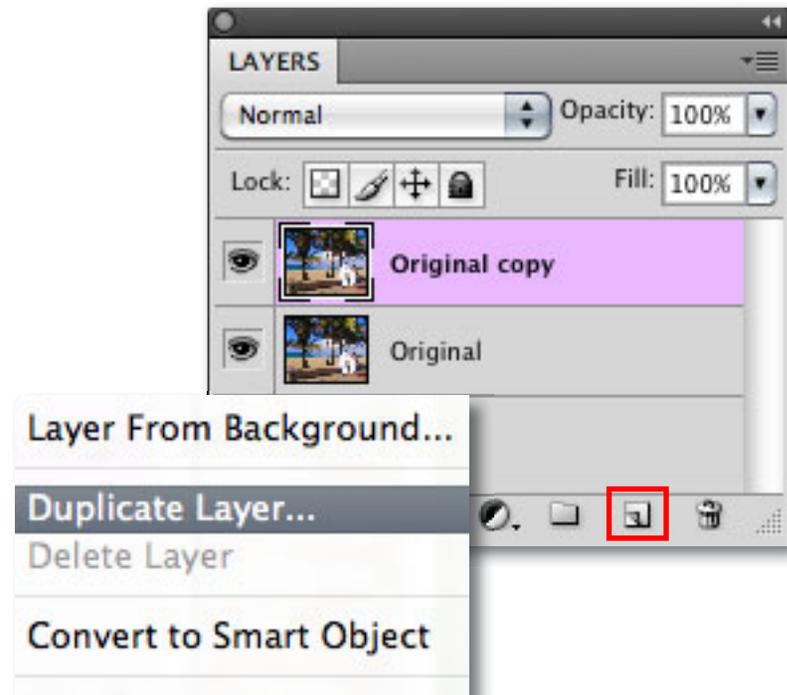

Before Topaz Simplify

After Topaz Simplify

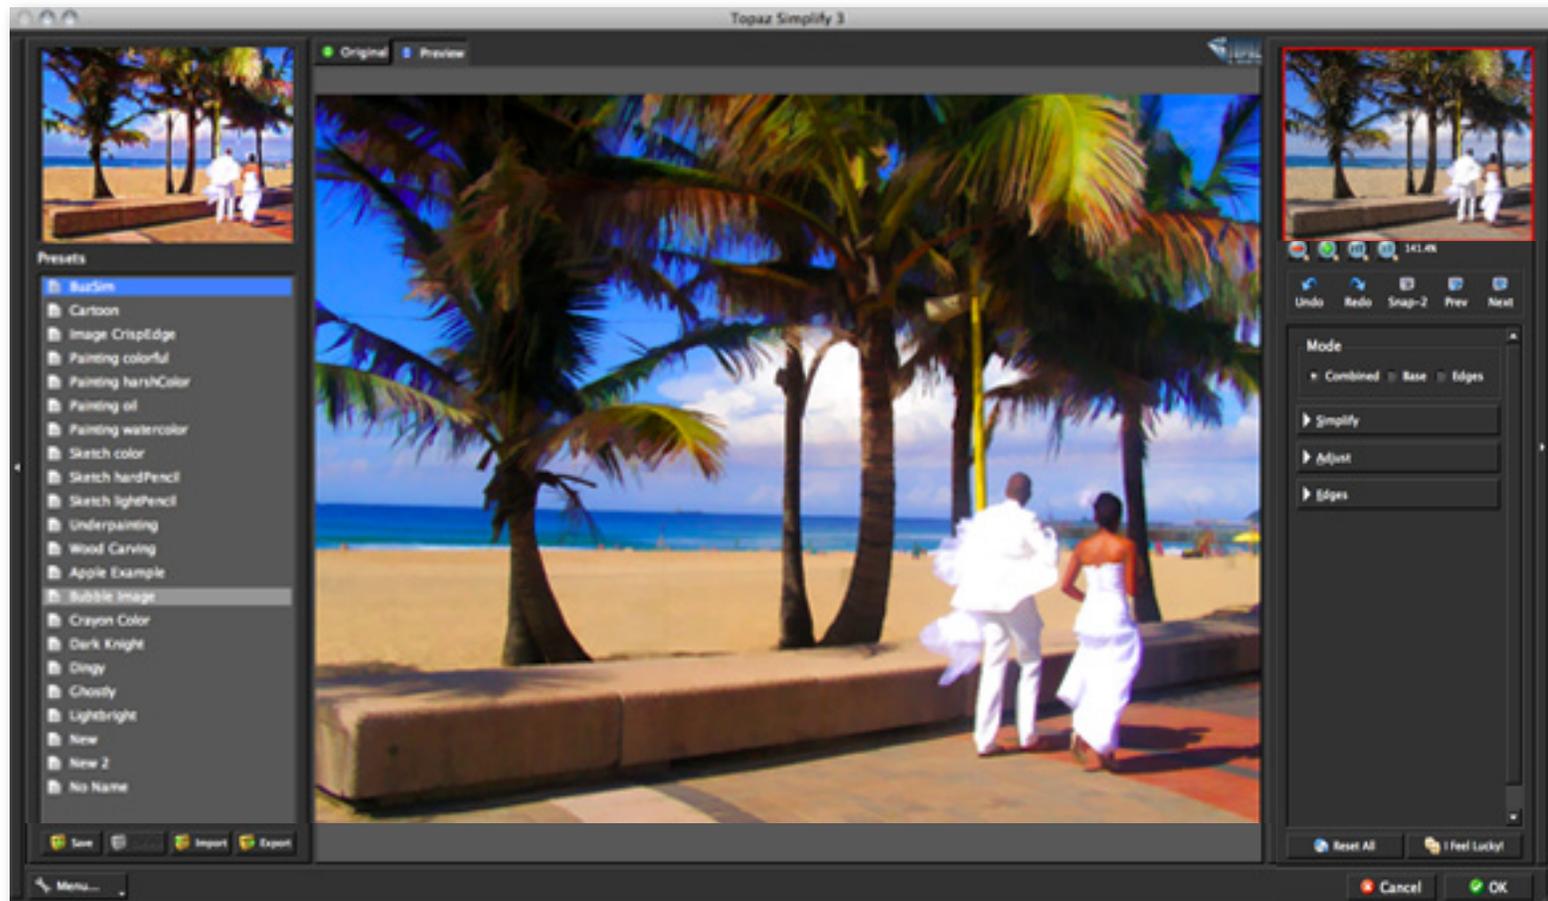

We will be using this beach image of a couple on their wedding day for our example. The goal for this image is to take it in a more artistic painting direction by removing some of the smaller details and lines and enhancing the color. In the following steps, we will show you how to achieve optimal results with your own photos, following this model. So, let's get started.

1. Open an image file.
2. Create a duplicate layer of your image. Right-click on your image layer in your layers and select "Duplicate Layer". You can also achieve this by selecting your image layer and dragging it down to the new layer icon.

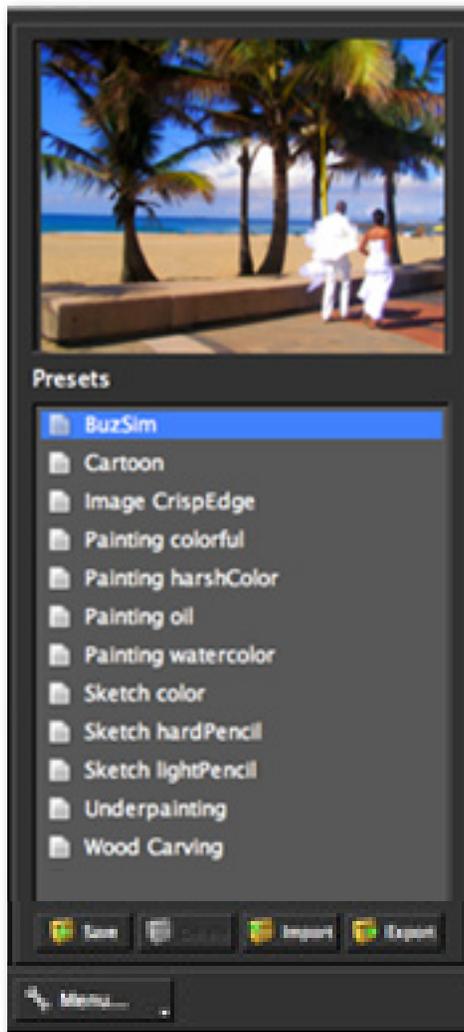

3. To begin working on your image go to Filters -> Topaz Labs -> Simplify 3.
4. Once your image loads, use the zoom tools to zoom in on a specific part of your image. Then you can click on the preview and drag it around until you find an area that you like.

Again, we want to take this image into a more artistic direction by removing details and giving it a painterly effect. Doing this will bring new character to the scene. To achieve this we will be working with the presets and sliders for this example, but you can start any way you like.

5. If you want to choose a default preset, scroll through the panel on the left side of the screen. To select it, just click on it and the sliders will automatically adjust to the pre-defined settings and parameters. For this example we will be using the BuzzSim preset.

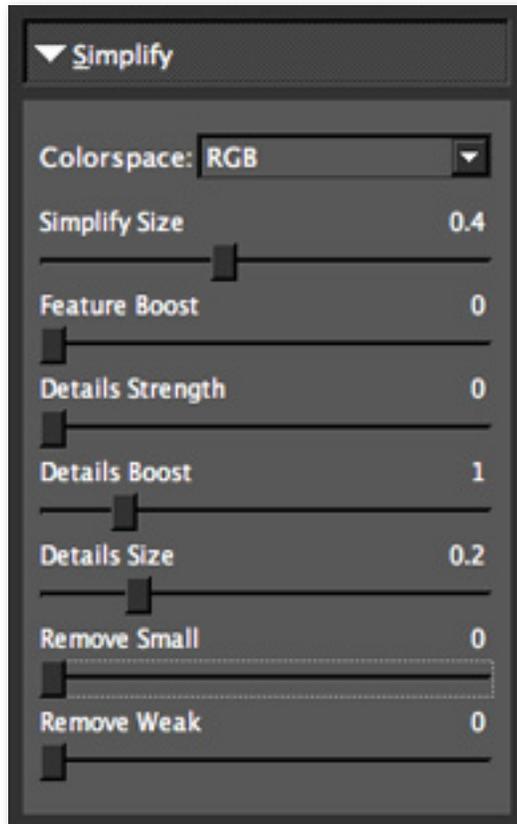

If you are satisfied with the preset adjustments then you can click “OK” to process your image and save it back to Photoshop.

If you would like to make some additional adjustments to your enhancement settings then you can do so by adjusting any of the sliders in the three tabs manually until you achieve your preferred image results.

Don't forget that you can use the shortcut keys in Topaz Simplify 3 to speed up your workflow.

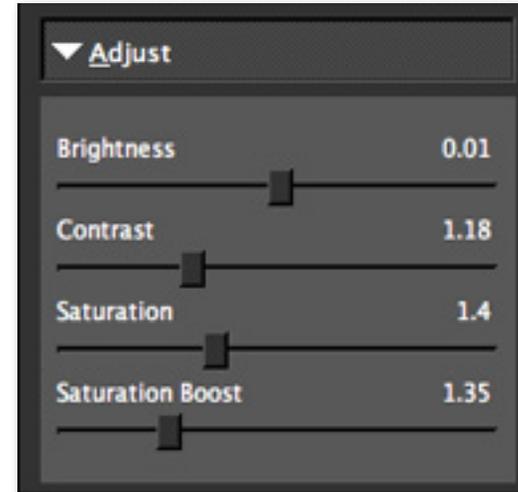

6. Start in the Simplify tab. It is a good idea to begin here, and then progress to the Adjust and Edges tabs in order to see the effects of your adjustments easily.

7. Slowly adjust each of the sliders to create the optimal exposure in your image. For this image we will only increase the Simplify Size slider slightly allowing more of the smaller details to be removed.

When you are happy with the Simplify settings, move to the Adjust tab.

8. The Adjust tab gives you control over the color, contrast and brightness of your image.

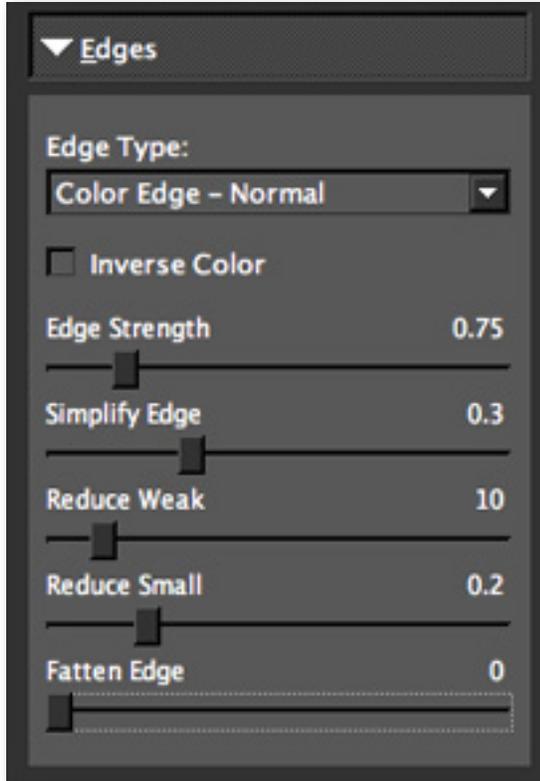

9. Slowly adjust each of the sliders to perfect the color in your image. For this image we will increase the Contrast slider just a bit.

10. We will also gently increase the Saturation and Saturation Boost sliders.

When you are happy with the color settings, move to the Edges tab.

Remember: You can use the Saturation Boost slider's ability to adjust the saturation levels of weaker image colors to create a "selective color" effect.

The Edges tab is where you can really make the objects in your image pop by enhancing or minimizing the edge detail.

11. Use the Original and Preview tabs to switch between your original image and your Simplified image to see the difference. You can also use your spacebar shortcut key to do this as well.

If you want to make some additional adjustments you may do by continuing your work with the sliders. If you

are happy with the new artistic look of your image then you are ready to process your changes.

11. Click OK and watch your image transform into a beautiful artistic masterpiece.

Before Topaz Simplify

After Topaz Simplify

Before Topaz Simplify

After Topaz Simplify

Sample Project #2

In this project, we will walk you through a second Simplify workflow to show you how easy it is to instantly turn your digital image into a work of art.

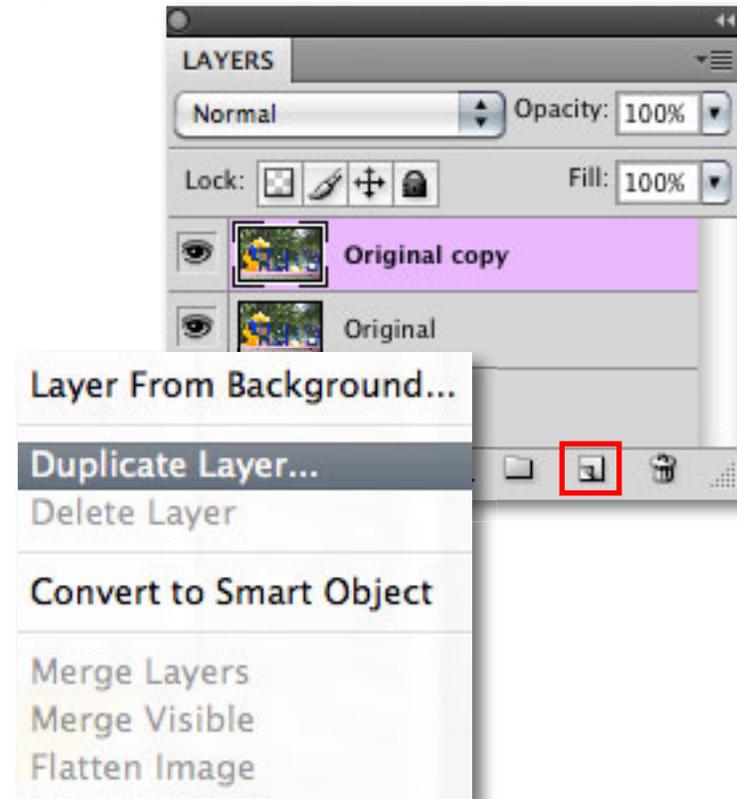

Before Topaz Simplify

After Topaz Simplify

We will be using this photo of a playground for our example. In the following steps, we will show you how to achieve optimal results with your own photos, following this model. Let's get started.

1. Open an image file.
2. Create a duplicate layer of your image. Right-click on your image layer in your layers and select "Duplicate Layer". You can also achieve this by selecting your image layer and dragging it down to the new layer icon.

3. To begin working on your image go to Filters -> Topaz Labs -> Simplify 3.

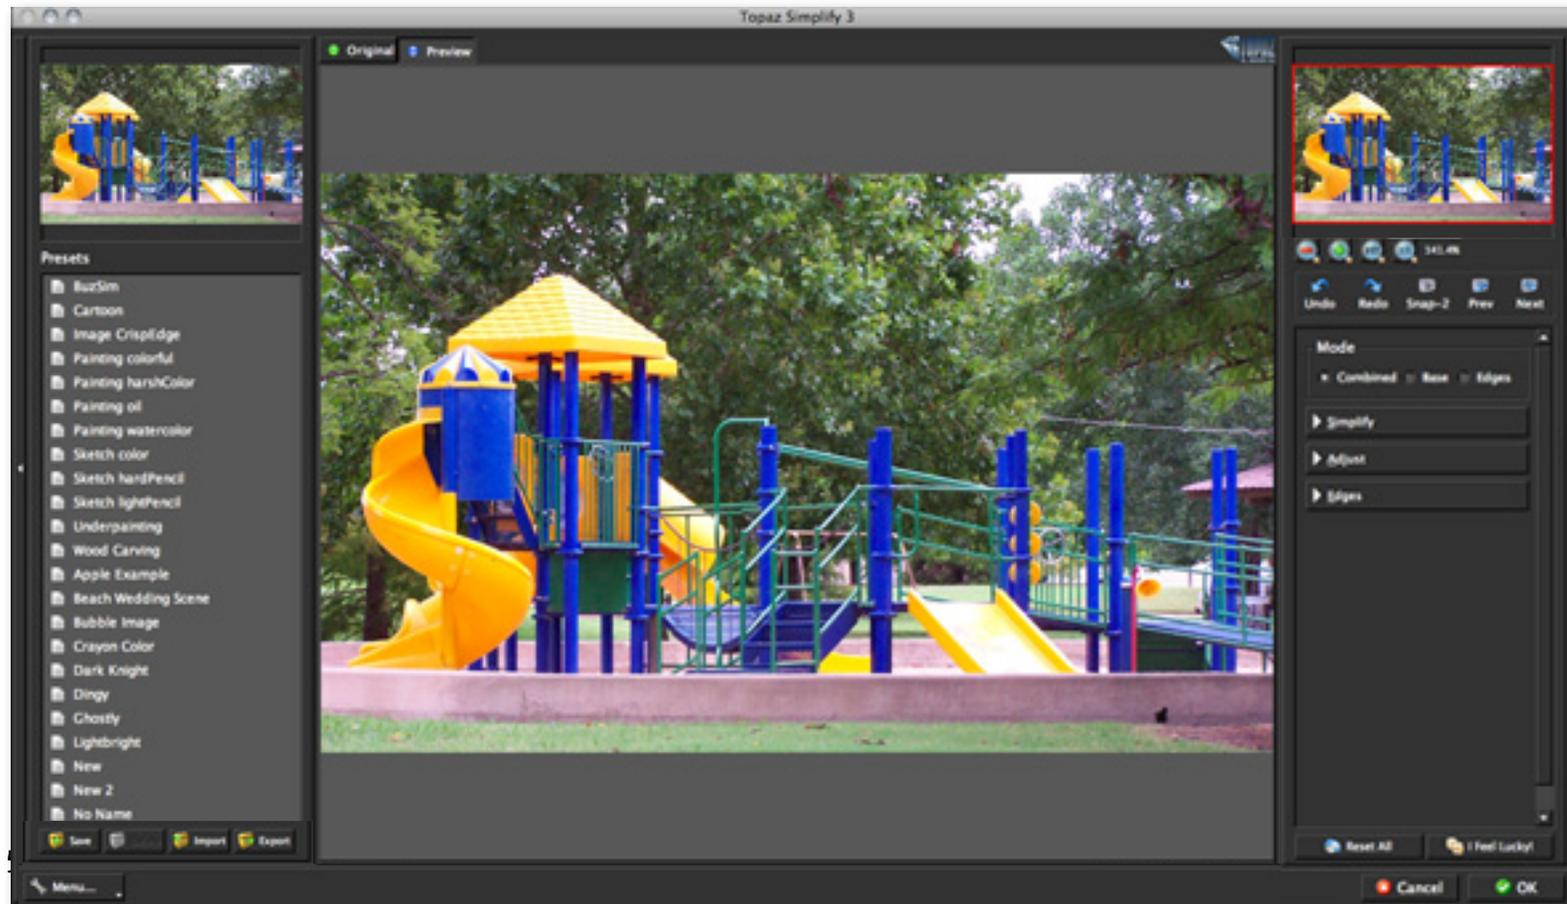

Please visit the Topaz Simplify website at <http://www.topazlabs.com/simplify> for video tutorials, tips, and tricks!

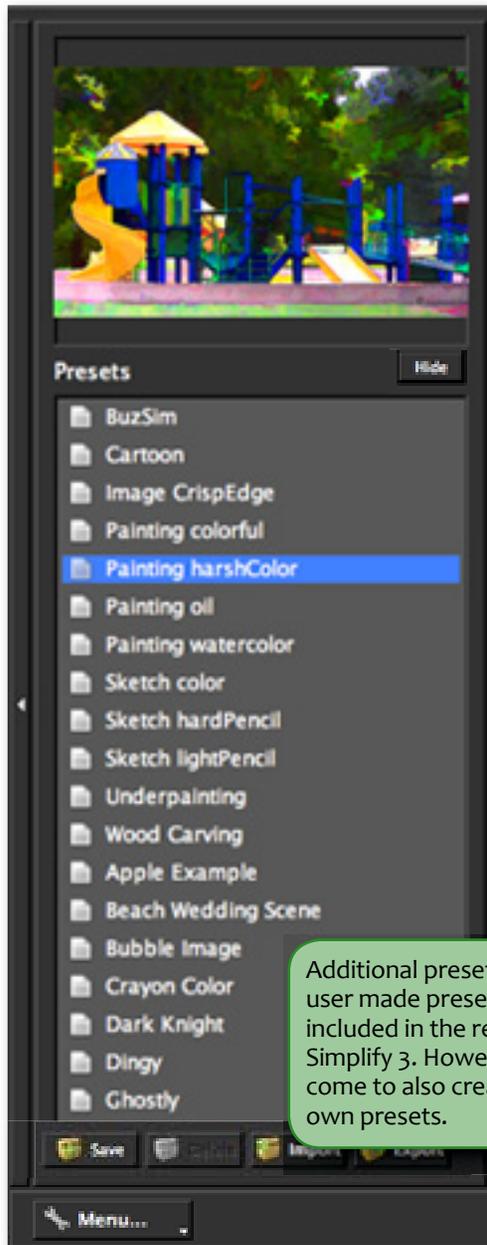

Once your image loads, use the zoom tools to zoom in on a specific part of your image. Then you can click on the preview and drag it around until you find an area that you like.

We want to take this image into a more creative and artistic direction, so we will begin working with the default presets and then move to the sliders, but you can start any way you like.

through the panel on the left side of the screen. To select it, just click on it and the sliders will automatically adjust to the pre-defined settings and parameters.

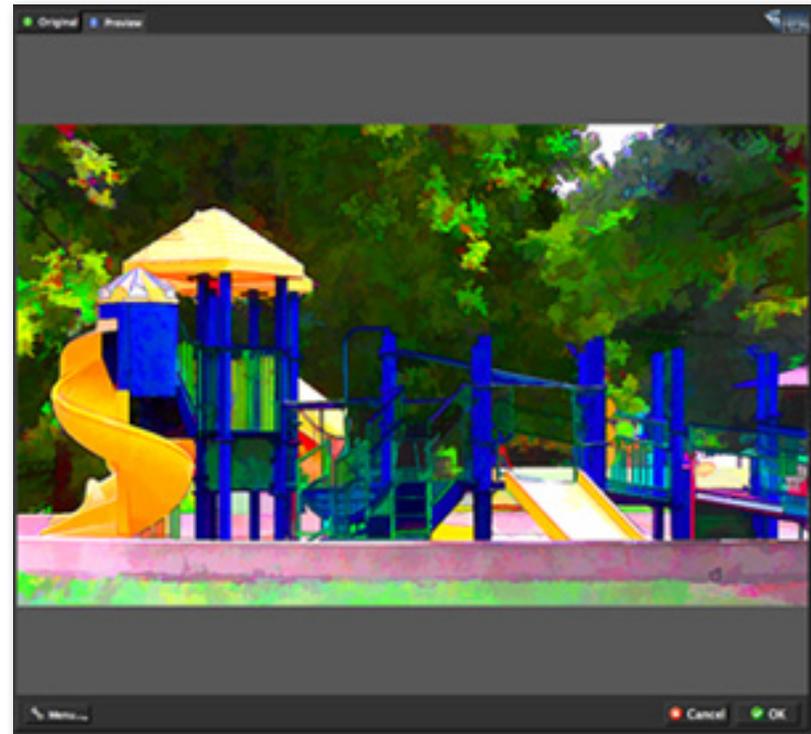

For this example we will be using the Painting Harsh Color preset.

Additional presets seen here are user made presets and are NOT included in the release version of Simplify 3. However you are welcome to also create and save your own presets.

With a wide variety of presets you will often find that a single selection will give you optimal image results.

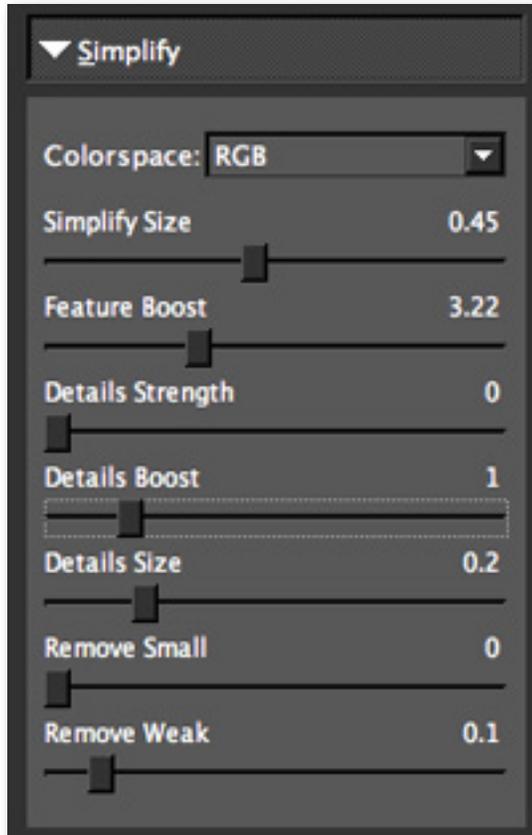

If you are satisfied with the preset adjustments then you can click “OK” to process your image and save it back to Photoshop.

If you would like to make some additional adjustments to your enhancement settings then you can do so by adjusting any of the sliders in the three tabs manually until you achieve your preferred image results.

Don't forget that you can use the shortcut keys in Topaz Simplify 3 to speed up your workflow.

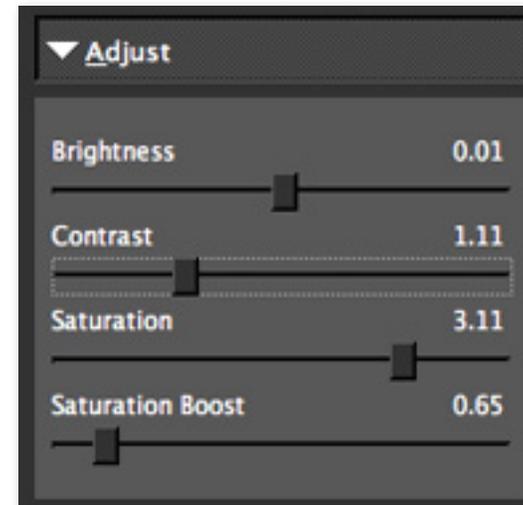

6. Start in the Simplify tab. It is a good idea to begin here, and then progress to the Adjust and Edges tabs in order to see the effects of your adjustments easily.

7. Slowly adjust each of the sliders to create the optimal exposure in your image. For this image we will slightly decrease the Simplify Size slider to bring back in some of the smaller details and also slightly increase the Feature Boost slider.

When you are happy with the Simplify settings, move to the Adjust tab.

8. The Adjust tab gives you control over the color, contrast and brightness of your image.

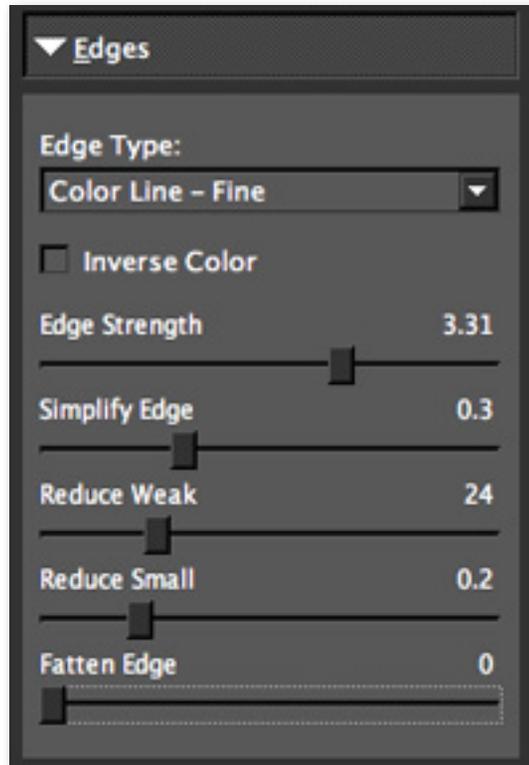

9. Slowly adjust each of the sliders to perfect the color in your image. For this image we will slightly increase the Saturation and Saturation Boost sliders.

When you are happy with the color settings, move to the Edges tab.

Visit the Topaz Simplify image gallery to checkout over 200 user-submitted Simplify images.

11. Use the Original and Preview tabs to switch between your original image and your Simplified image to see the difference. You can also use your spacebar shortcut key to do this as well.

If you want to make some additional adjustments you may do by continuing your work with the sliders.

If you are happy with the new artistic look of your image then you are ready to process your changes.

11. Click OK and watch your image transform into a beautiful artistic masterpiece.

Before Topaz Simplify

After Topaz Simplify

Before Topaz Simplify

After Topaz Simplify

Achromatic - Without color.

Adjustment Layer – A layer that allows you to adjust the look of an original image without making it permanent. With adjustment layers you can make various changes to a layer without damaging it and go back and readjust it at anytime.

Algorithm - Any bit of code or programming that defines a process.

Brightness - The degree to which a color sample appears to reflect light.

Chroma - Purity or intensity of color. The difference of a color against the brightness of another color that appears white under similar viewing conditions.

CMYK - Cyan, magenta, yellow, and black. A color model commonly used for 4-color printing by printers to define and mix all of the colors they are capable of outputting.

Color - The human perceptual response to different wavelengths of light impinging on the photo receptors in the retina.

Color channel - The visual component of a color digital image that represents all the pixels in that picture made up of a specific primary color. In a typical digital photo, the primary colors of red, green and blue (from the RGB color model) create all the colors in that photo, which may be represented by three color channels, each of red, green or blue.

Color Profile - defines the range of colors that can appear in a digital photo.

Desaturate - Decreasing the intensity of a color (hue).

Download - The process of transmitting or transferring data from one device to another.

Export - Outbound data transfer in a format that can be used by other programs.

Import - Inbound data transfer into a file or document.

Pan and Zoom - A useful function that allows users to magnify the captured image in the preview and then, by using the cursor, to move or pan around the image. Typically Pan and Zoom allows users to magnify the image 2x or 4x time. By magnifying the images and zeroing in on a specific section, you can see details not visible when the entire image is sized to fit the preview.

Parameter - A numerical or other measurable factor forming one of a set that defines a system or sets the conditions of its operation.

Photo-editing or Imaging software – Programs in which you can alter your photos and / or create digital images. Depending on the software, you can improve exposure, color and other attributes of your picture, paint on it, add type, apply special effects, remove noise, resize it, combine it with other pictures, prepare it for e-mail or posting on the web, output it to a printer, or do any number of other manipulations or edits.

Plug-in - A computing feature with the ability to be added to a system to give extra features or functions.

Preset - A pre-defined combination of parameters and settings that is saved into a folder within Topaz Detail 2. Topaz provides default presets. A preview of each preset can be seen in the preset preview window located at the top left hand side of the interface above the preset list.

Preview- Shows the processed preview of the image.

RAW image - An image file format that contains untouched, “raw” pixel information straight from the digital camera’s sensor. It has yet to translate the information in each pixel into the full color information, so this format offers more control over how the final JPEG or TIFF image is generated.

Refine – Improve (something) by making small changes to make it more subtle and accurate.

RGB - Red, Green, Blue. The color model that is used in digital cameras and by computer monitors.

Saturation - The difference of intensity within a specific hue.

Shadow - A dark area or shape produced by a body coming between the rays of light and a surface.

Sharpness - The clarity of detail in a photo.

Smoothing - To make a surface more regular or consistent; free from perceptible projections, lumps, or indentations.

Before Topaz Simplify

After Topaz Simplify

“I need a Topaz Simplify trial key.”

Visit <http://www.topazlabs.com/downloads> for a trial key. Please check your Spam folder because your Spam filter sometimes filters out the automated email.

If you need more time to evaluate, please e-mail us at www.topazlabs.com/support for an extended trial key.

“I can’t find Topaz Simplify in the Photoshop Filters menu.”

If you’re using Windows:

1. Go to C: \ Program Files \ Topaz Labs \ Topaz Simplify 3 \ Plug-ins. Right click the file “tlsimplify3.8bf” and click “Copy”.
2. Go to your Photoshop Plug-Ins folder, usually located at C: \ Program Files \ Adobe \ Photoshop CSx \ Plug-Ins. First, delete anything that is currently there that has to do with Topaz Simplify 3 This includes any folder that might be labeled “Topaz Simplify 3” or any tlsimplify3.8bf file. After doing that, right-click on any empty space and click “Paste”.
3. Quit and restart Photoshop and Topaz Simplify will appear in your Filters menu.

If you’re using Mac:

1. Go to Macintosh HD / Library / Application Support / Topaz Labs / Simplify3 / Plug-ins and right-click Topaz_Simplify3.plugin. Click “Copy”.
2. Go to Applications / Adobe Photoshop CSx / Plug-Ins (or wherever your Photoshop Plug-Ins folder is located). Delete any current reference to Topaz Simplify
3. Afterwards, right-click any empty spot and paste the

Frequently Asked Questions

Topaz_Simplify3.plugin file into the Photoshop Plug-Ins folder.

3. Quit and restart Photoshop and Topaz Simplify 3 will appear in your Filters menu.

“Do you have any other Simplify tutorials?”

Yes, please see pages 26 and 33 of this Topaz Simplify user guide, and also visit: <http://www.topazlabs.com/tutorials/simplify>

“I do not have Photoshop, will Simplify work with my Elements, Aperture, Lightroom, iPhoto Paint Shop Pro, Photo Impact or Irfanview?”

Yes, you can use Topaz Simplify with any of the above host programs. However, to use Simplify in Aperture, Lightroom or iPhoto, you will need to download the free Topaz Fusion Express plug-in. For more information please visit: www.topazlabs.com/fusion

“What are the limitations of the trial version of your software?”

The only limit on the trial versions of the Topaz plug-ins is time. The free trial versions are designed to enable you to experience the full functionality of our plug-ins for a 30-day trial period. After the trial period is up, you will only be able to use the Topaz software by purchasing it. You will then receive a license key to activate the plug-in, and the trial version will automatically become the full version with no time limitations.

“If I use the 30-day trial version will I need to uninstall the trial version before I upgrade to a full version?”

No, the Topaz trial software is designed to be unlocked to become the full version simply by entering a license key. The full license key will be e-mailed to you immediately after you purchase the software.

.....

“Where do I enter my key?”

To enter your key please open an image in Photoshop and go to Filter -> Topaz Labs -> Simplify 3 -> Menu -> Enter Key. You can then copy & paste or type in your license key and then select OK.

.....

“I had Topaz Simplify as a trial, then I purchased. How do I enter my new license key?”

You can enter your new license key by opening up an image in Photoshop and go to Filter -> Topaz Labs -> Simplify 3 -> Menu -> Enter Key. Please remove the trial key and enter your new purchased license key, then select OK and you are all set.

.....

“My Topaz Simplify key doesn’t work!”

There are a couple of reasons why Topaz Simplify might think your key is invalid.

First, make sure that your key is in the proper format. It’ll be in the format “xxxxxx-xxxxxx-xxxxxx-xxxxxx-xxxxxx” and will be all numbers in 30 digits in five groups of six (no letters).

Second, make sure that as you’re entering the key

Frequently Asked Questions

there is nothing in the space beforehand. This means clicking, pressing Ctrl-A, and hitting delete to make sure that absolutely nothing is in that field before you paste in the key.

If it doesn’t work when you copy and paste, try typing it out, and vice versa.

.....

My Topaz filters are grayed out in the filter menu.

Please make sure that you are using a 8-bit or 16-bit image that is in RGB color mode. Also, if your project includes adjustment layers please make sure that you are not on an adjustment layer. You will need to select the image layer. This will allow you to access your Topaz programs.
