

Visual Programming With Prograph CPX™

Table of Contents

SECTION 1: PROGRAPH PROGRAMMING FUNDAMENTALS

1. Overview -- Why Do I Need Prograph?

What is Prograph?

An Example Prograph Program

Program: Address Book

2. Elements of a Prograph Program

Projects

Sections

Operations

Methods

Built-In Methods -- The Prograph Primitives

Data Types -- Constants, Variables and Persistents

Decision-Making with Matches, Controls and Cases

Calculations with Evaluations

Classes

Summary of Major Prograph Programming Operations

SECTION 2: BACKGROUND FOR OOP -- PROCEDURAL PROGRAMMING TECHNIQUES

3. Prograph Methods

Methods and Operations

Local Methods

Program: Triangle Adjacent Side

Bigger Programs Using Several Methods

Structured Programming

Creating Methods at Runtime

Program: Divide Numbers

Setting Detailed Help Information for Your Methods

4. Program Flow Control

Decision-Making and Cases

The Match Construct

Program: Toss A Coin

Multiple Cases

Program: Grade Exams

Program: Choose An Action

The Control Construct

Inject

Program: Choose Trig Function

Recursion

Program: Factorial

5. Loops

The Loop Construct

Program: Counter

Prograph Version of a For...Next Loop

Program: For-Next Loop

Looping an Indefinite Number of Times

Program: Square Root

The Repeat Construct

Program: Math Quiz

6. Strings and Persistents

String Variables

Concatenation

Program: Get Full Name

Substrings

String Conversion

Program: Numbers To Strings

Persistents

Program: Password

7. Lists

Lists -- Collections of Things

List Multiplexes

Program: Sales Tax

Getting and Setting Individual Elements

Program: One Price

Partitioning Lists

Program: Separate A List

Nested Lists (2-dimensional or Higher-dimensional Lists)

Program: Merchandise List

Filling and Using a New List

Program: Names and Ages

8. Applying Procedural Programming

Program: Programmer's Calculator

Converting Numbers to Decimal Format

Reconverting Decimal Formatted Text to Numbers

SECTION 3: OBJECT-ORIENTED PROGRAMMING TECHNIQUES

9. Principles of Object-Oriented Programming Principles

Why Use Object-Oriented Programming?

Solving Problems by Using Classes and Objects

The Class Interface

- Communication With and Between Objects -- Requests to Perform Actions
- Software Reuse -- Inheritance and Subclassing
- Polymorphism
- Deciding What the Classes and Objects Should Be
 - English Descriptions
 - Class-Responsibility-Collaborator (CRC) Cards
- Changing a Class' Behavior by Subclassing
 - Finding Subclasses
- Software Reuse -- Extending a Class with Composition

10. OOP with Prograph -- Creating Classes

- Creating Classes with Prograph
 - `Class: Car`
- Attributes
- Class Methods
- User-Defined Get and Set Methods
- Setting Default Values for Attributes
- Putting Objects to Use in Prograph Programs

11. Extending Classes -- Subclasses and Inheritance

- Subclassing (Inheritance)
- Abstract Superclasses
 - `Class: Array`
- IntArray -- The First Subclass of the Array Class
 - `Class: IntArray`
- Instance or Initialization Methods
- Overriding and Accessing Superclass Methods
- One Form of Polymorphism in Subclasses
- Creating a Second Array Subclass -- RealArray
 - `Class: RealArray`
- Using the Array Classes
- Composition
 - `Class: Coordinate`
 - `Class: Line`

12. Using the Full Power of OOP

- Polymorphism
 - `Program: Polymorphic Shapes`
- Shared Class Attributes
 - `Class: Student List`

13. Applying OOP -- Creating Utility Classes

- `Class: Complex Numbers`
- `Class: Fractions`
- `Class: Stack`
- `Class: Queue`

Class: Matrix

SECTION 4: OBJECT-ORIENTED USER INTERFACE MANAGEMENT

14. The ABCs of Interclass Communication

- Prograph GUI Construction Tools
- What are Application Frameworks?
- The ABCs as an Enhanced Application Framework
- The Application Builder Classes and Interclass Communication
- The Application Builder Editors as GUI Designers
- The Application Builder Editors as Message Designers

15. Applying the ABCs -- User Interface Construction with the Application Builder Editors

- The Calculator Program -- Version 1
 - Program: Calculator
- Designing the User Interface of the Calculator Program
- Writing the Calculator Program Code

16. Applying the ABCs -- Son of Calculator

- The Calculator Program -- Version 2
 - Program: Calculator 2
- Designing the User Interface of the Calculator Program
- Writing the Calculator Program Code

17. Applying the ABCs -- Graphical Display of Documents

- The Data Plotter Program
 - Program: Data Plotter
- Writing the Code for the Data Plotter Program

SECTION 7: EPILOG

18. Where To Go From Here

- Recommended Reading
 - Computer Architecture
 - Object-Oriented Programming
 - Visual Programming
 - Prograph
- Electronic Resources
 - The Internet
 - Anonymous FTP Sites
 - World-Wide Web Pages
 - Bulletin Board Services
