

Welcome to Apple PIE Developer Information Group (DIG) CD#3

Included on this CD are many items you can find on the PIE Developer Information Board on AppleLink. If you do not have access to that board and are a registered NTK purchaser, please read the PIE Technical Support letter located on the top level of this CD.

What to look for on this CD & the fastest way to find it:

**Technical Information:** Here is where you will find all of the latest documentation, Q & A's and sample code written by the DIG technical staff. You will also see articles written by DTS and others in the world of Newton.

**Tools:** DocViewer 1.1, BBEdit Lite 2.3.1, Disinfectant 3.2, GraphicConverter 1.6.6E and ResEdit 2.1.1.

**Developer Training:** Information about Newton training offered by both Apple Developer University and Bear River. There are also descriptions of courses under development at this time.

**StarCore:** Information about what StarCore is and who to contact if you are interested in more information

**Shipping Your App:** I tried to come up with a title that programmers would open. Here you will find information about signature registration, trademark issues and the distribution agreement.

**Fun Stuff:** Go into this folder at your own risk. Our DTS team created this for your enjoyment.

**To conduct a search use On Location Indexes.**

We hope you find this information useful and fun. Please link any comments and/or suggestions to PIESYSOP.
