

Dear Cachet Owner:

Enclosed is your copy of Cachet, version 1.0.2. There are no significant changes to the way you'll use Cachet, but we have improved its capabilities.

With Cachet 1.0.2 you'll find:

- **Wider Cachet Files**

Cachet is capable of opening files up to 8190 pixels wide when operating under System 7.0 or later.

- **EfiColor Profiles Update**

Fiery/Xerox 5775 - designed for use with the EFI Fiery 125i color server attached to a Xerox 5775 full-color copier.

Euroscale - allows EfiColor quality for offset processes that conform to European CMYK printing ink standards.

The SNAP-Newsprint profile has been withdrawn. If you need assistance with processes adhering to SNAP (Specifications for Non-Heat Advertising Printing) guidelines, please call Technical Support at (415) 286-8503.

- **Improved Performance**

The new EfiColor Processor serves your EfiColor Color Management System 30% faster. This saves time when you're saving separation files and printing. The processor works with the most recent EfiColor-compatible products, such as QuarkXPress 3.2.

- **Metric Color Tag Capability**

Cachet automatically writes metric color tags (MCT) to files so that other applications that read these tags will automatically recognize the color space of the file. This is extremely useful in keeping color consistent with other applications supporting the EfiColor Management System.

**PLEASE NOTE:** The enclosed "**READ ME FIRST**" contains special instructions for installing your new version of Cachet. To avoid possible incompatibilities, please remove all previous Cachet-related files before installing Cachet 1.0.2. We recommend that you use "Easy Install" when installing Cachet 1.0.2.

We know you'll find this improved version of Cachet valuable. We appreciate that you've selected Cachet for your color desktop publishing solution, and we are dedicated to bringing you timely and useful updates. We welcome your comments and suggestions.

Sincerely,

ELECTRONICS FOR IMAGING, INC.
