

Before You Install Logic Studio

This document covers system requirements and other information that should be considered before installing Logic Studio.

Warning: Soundtrack Pro 3 and Compressor 3.5 contain updated components that are incompatible with Final Cut Studio 2 or earlier. If the Logic Studio installer detects Final Cut Studio 2 or earlier on your system, it automatically deselects the checkboxes for Soundtrack Pro and Compressor in the Custom Install pane.

Note: If you have installed previous Logic versions on your computer, the Logic Studio installer may change files in the Logic factory content folder. Files with names identical to the default Logic factory content files are replaced. If upgrading from Logic Express 7 or Logic Pro 7, files with different names are moved to a new folder, called Previous Logic Settings.
