If you burn your own CDs with many files on it, you should use FolderClean Up (FCU). The look of your harddisk or just a couple of folders need to be cleaned? Then FCU is the perfect solution!

Instead of using time-consuming standard Apple desktop-menus, now you can use FolderCleanUp to save a lot of time and give your storage media a well-ordered look.

To see what FCU can do for you - simply drag the "Demofolder" which you find enclosed with the installer onto the FolderCleanUp application and look what happens.

FolderCleanUp arranges folders with sub-folders in the following way:

Depending on how many files or subfolders are contained in a directory, FCU sorts these files and represents them either as icons or as a list.

FCU is Freeware! If your company needs a customized version with special representation, let us know.

We can modify the code and produce an exclusive version for you - for a small contribution.

FCU is Shareware. You can copy the unmodified installer file to anybody who is interested in this little helper. Use FCU on your own risk!!! The author is not responsible for any data loss or disk corruption.

Requirements:

OS 7.5x or higher

AppleScript installed
