Whether you're a beginner or professional graphic artist, you can modify your existing fonts or create completely new fonts with Fontographer. The typefaces you use say a lot about you, your company, and your clients. And Fontographer lets you create a font library that projects exactly the right image. Discover Fontographer, the most popular font design software from the creators of FreeHand, and build a font library that's as unique as you are!

Fontographer lets you multiply your fonts with your imagination. Create your own font from scratch, or take advantage of Fontographer's "Font Blend" command **1** to easily blend two typefaces to make a multitude of new fonts. In just one step, you can also create a bolder or thinner version of a font, and use it in any program with a font menu.

Create professional-quality fonts in minutes!

Fontographer comes with a robust set of drawing tools **2** that make modifying or creating fonts easy and fun. If you have ever used a drawing program, you already know how to use Fontographer's drawing tools. You can even use the perspective tool to perform 3-D rotation of objects **3**.

Create signatures, graphics and type.

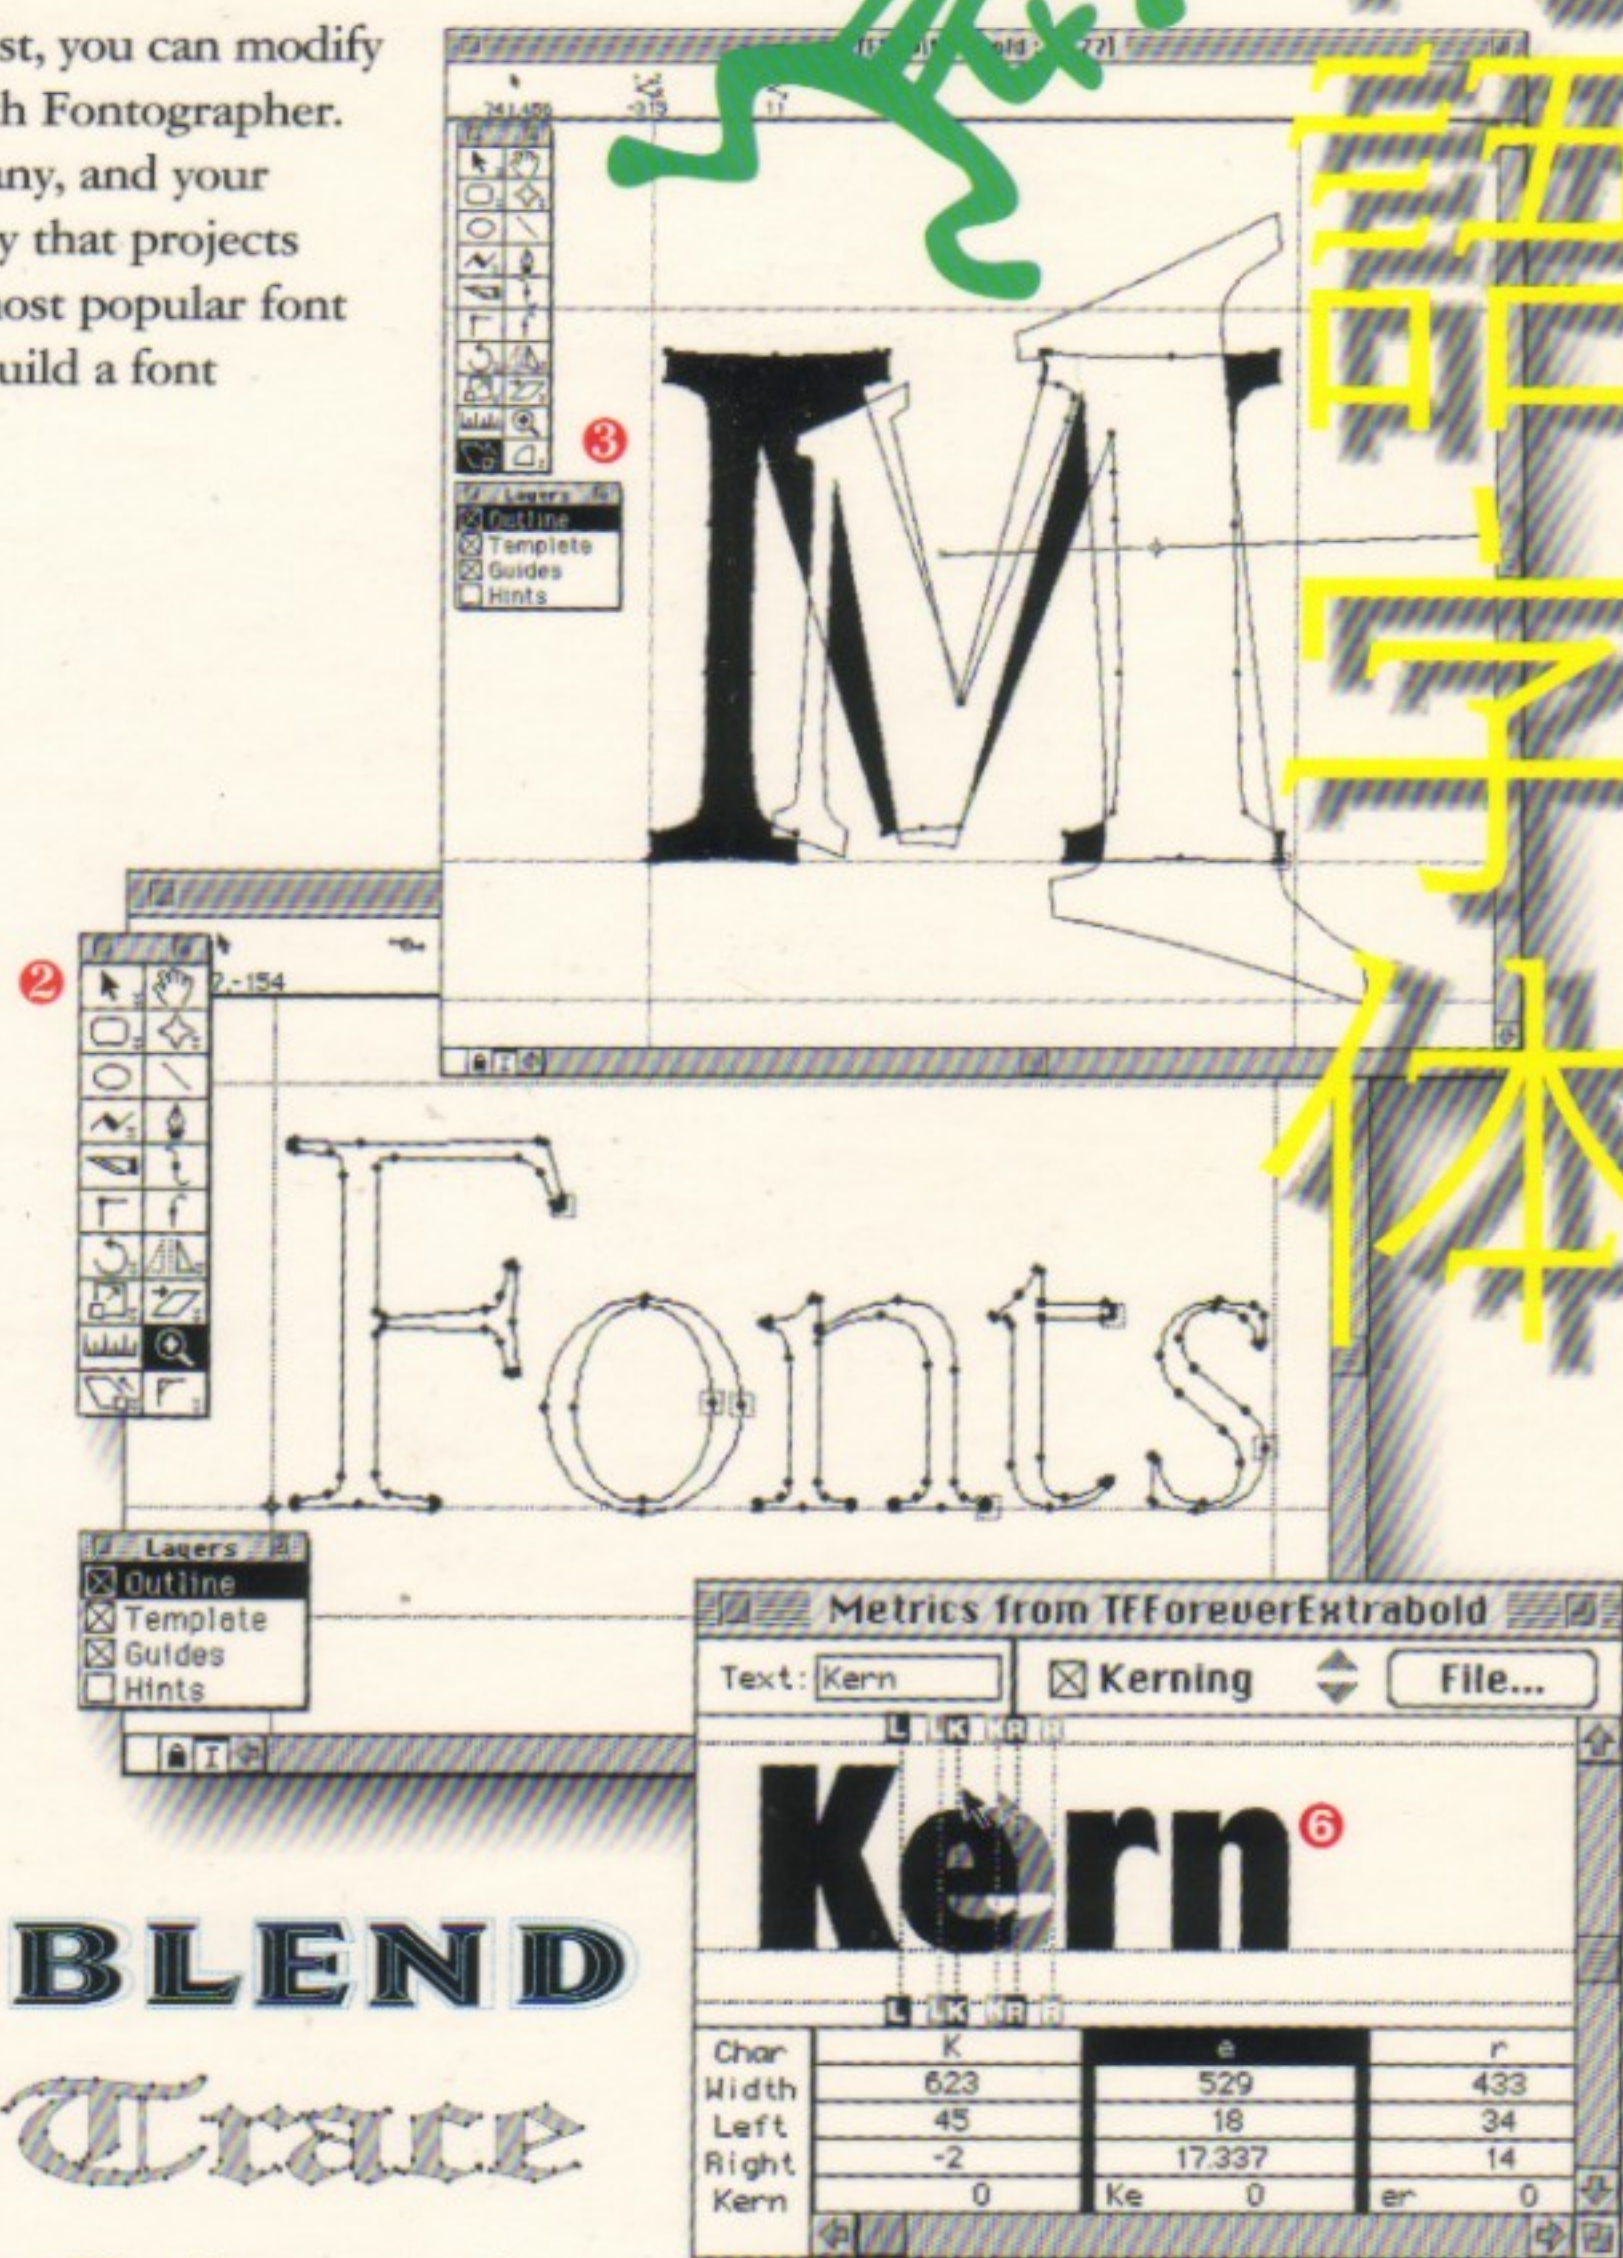

Scan a signature, autotrace it **4** and use it in any document. Draw or trace your company's logo and turn it into a font! Unlike other drawing programs that just create a graphic, Fontographer creates fonts that are usable in any program. More than a graphic—it's now a font!

Break the boundaries of type.

Use the Calligraphic Pen tool **5** or the Pressure-sensitive Pen tool with a drawing tablet, and then let your imagination take over. Fontographer lets you design your own custom dingbats and borders in a flash and use them in any document.

Personalize your existing fonts!

Fontographer has all the tools to make type manipulation easy for both beginners and professionals. Don't know how to create kerning pairs? No problem—Fontographer can automatically take care of spacing and kerning **6** your font.
