particleIllusion 3.0.5 for OS X Update

To install the 3.0.5 update, just copy all of the files in this folder into the folder where partcleIllusion 3 is installed. (If you chose the default location, that would be in the "particleIllusion 3.0" folder in your "Applications" folder.)

You want to "replace" all items.

I apologize for not having a more user-friendly way to update from 3.0.4 to 3.0.5, but the switch from PowerPC apps to Universal caused problems for our updater.
