Painter 7™

To install the Painter 7 Update, please follow the instructions below:

1. Download the Painter 7 update file to your computer. Expand/unzip the file.

2. Uninstall Painter 7 from your computer. If you have created any custom brushes, patterns, papers, nozzles, gradients, looks, or any other content, copy those custom library files to another location on your computer so they will not be lost.

3. Install Painter 7 from your CD. When you are finished, do not open the application. If you wish, you can restart your computer.

4. Install the Painter 7 Update over the clean installation of Painter 7. If you wish, you can restart your computer.

5. Launch Painter 7.

To determine if the update was successful, check the version number by following the instructions below:

Browse to where Painter 7 is installed on your computer.

Mac® Users: Select the Painter 7 application file and click CMD + I to perform a Get Info. The version number for the Painter 7 update is 7.1.357.

Windows® Users: Right click on the Painter7.exe file and click Properties. Choose the version tab. The version number for the Painter 7 update is 7.1.357.
